# Tips From an Envelope Man

Useful points about your mail—What to print on your personal or business envelope—The best ways to address letters to insure prompt delivery—Story of the inventor of the “window” envelope

*By James Logan*

Vice-President and General Manager, United States Envelope Company

**W**E HAVE known about envelopes for nearly four hundred years. We have been using them more or less for a hundred years, but they have been in general use for only fifty years. To-day we have more uses for them than our ancestors ever thought of, but the ordinary correspondence envelope remains as it always was.

This is not because new varieties have not been invented. Thousands of patent envelopes have, in fact, been tried, but the single practical innovation is the “window” envelope.

Some twenty years ago, A. F. Callahan, of Chicago, believed that if a transparent panel could be let into the front of an envelope the inside address of the letter would show through, and thus not only the writing of the address on the outside would be saved, but the possibility of getting letters into wrong envelopes would be avoided. He took some samples to the treasurer of a large corporation. The treasurer reached into his desk and pulled out a soiled, frayed envelope bearing a canceled stamp.

“How much do you think this envelope cost us?”

“I do not know this exact envelope,” answered Callahan, fingering the paper, “but in large lots it ought to cost—”

“Large lots nothing! I mean this one envelope!” exclaimed the treasurer. “It cost us exactly \$5,280. The mailing clerk put the wrong letter in it—a letter that gave away a price. We had to readjust a contract. When it was all over we were exactly \$5,280 to the bad.”

Callahan sold that corporation and others quite a number of orders, but the envelope was by no means the instant success that might be imagined. The safety feature—the insuring against getting the wrong letter into an envelope—was not enough.

The trouble with many inventors is that they do not take manufacturing difficulties into account; they hardly ever carry their ideas through to really marketable products. That was true of this en-

velope, which did not become a big success until the chemists found a cheap way of treating a special wood pulp so that it would be transparent, nor until William D. Slater invented a machine to turn out the envelopes by the thousands. Then it began to sell, and its use for sending out bills and statements is now almost universal, though it is never used for personal correspondence.

It saves business millions of dollars a year by avoiding the addressing of envelopes—and that aside from the losses

is a penal offense to tamper with mail—a boss has no right to open an employee’s mail.

The patent non-openable letter envelopes are of various kinds; some have interlocking devices which have to be torn before the envelopes can be opened. Then there is the wax seal, which is as safe as anything can be. In the few cases in which it would make a great difference to have a letter read, and there is a suspicion that it might be intercepted—as during the war—the letters are sent in code and if possible by hand.

A safety envelope is the sort of thing that people ought to want—and do not. The easily opening envelopes usually have a piece of string or wire under the flap which, when pulled, cuts the paper. But people sometimes complain that it is harder to find the string than to use a letter opener! I wound up one company that had spent three hundred and fifty thousand dollars trying to sell a wire envelope. An envelope, by the way, should be opened by slitting under the top flap. The sender ought to be careful that his letter is so folded that it does not crowd the envelope and thus be torn when the envelope is cut.

The smallest envelope is one for a single toothpick; it is made of rice paper and is crimped instead of being pasted. No one knows how many uses have by now been found for envelopes; if anyone had all the information his answer would be

good only during the moment that he gave it, for a new use is being discovered every minute. Goods that used to be wrapped up are now put into envelopes; for instance the umbrella envelope and the suit envelope are common. Some hotels serve rolls in envelopes—many food products use them. In fact, it is hard to draw the line as to where the envelope stops and the package begins. There are few freak styles any more. An envelope is made to fit the papers or the articles that are to be enclosed in it, and is not made odd merely for the sake of being odd. Years ago, when (Continued on page 210)

## Why Some Letters Are Never Read

**“T**HE Post Office Department has always been against the envelope that is printed all over with only a small space left for the address,” says Mr. Logan, “but this kind was used until a few years ago in the belief that thereby advertising might be had. It is now recognized that the envelope is a carrier of a letter and not an advertising medium, and that too much printing not only increases the hazards of delivery, but also may cause the envelope to be tossed away unopened as an advertisement. The development of selling by mail has taught that an envelope should not try to say what is inside the letter—else the letter may never be read.

“The post office likes the return card to be in the upper left-hand corner of the envelope, but most personal stationery uses the flap. Since the purpose of the envelope is to get the letter to its destination and back to the sender if the addressee cannot be located, both the address and the return address ought to be plainly typed or written, so that the postal clerk and letter carrier can get them at a glance.”

it prevents through misdirected letters.

Introducing a new envelope is a gamble, but that does not bother the inventors. They seem to think the public is eagerly waiting for a chance to buy an envelope that cannot be opened and resealed without detection, or one that is self-opening. However, only the inventors are worried by having mail surreptitiously read and by the trouble of opening an envelope. The public is not interested, not to the extent of changing its buying habits. Anyone who has a great fear that other eyes will read his mail hires a post office box and gets the mail from it himself. It

# A Wonderful Salesman Of Transportation

After selling newspapers, mowing lawns, and husking corn, as a boy, John A. Ritchie got his first transportation job as a railroad baggage truckman—His rise in the railway field and his extraordinary success with New York City's "Fifth Avenue bus" lines is full of drama—To-day he heads the largest motor-bus company in America

*By Merle Crowell*

**G**ET me right, now. I'm not a worker of miracles—and I don't like to be called one. But I think that I *do* know what goes on in the head of the man who works with his hands!"

"Smiling Jack" Ritchie bent toward me across the desk and his soft brown eyes glowed.

"There's no man in this company who has worked longer or harder for less money than I have," he continued. "And having been knocked from pillar to post, and kicked out of one job, I believe that I have learned something of the hopes, ambitions, fears, and pride of the average worker."

"And you handle your own men in the light of what you found out as a laborer?" I suggested.

"Handle 'em!" exploded Ritchie. "My dear man, labor can't be *handled*! It can be *led*! And to-day the workers of the country are groping for real leadership as never before. Every human being craves sympathy and understanding. When he gets that he will give in return the thing on which all business progress is based, which is cooperation."

"What is cooperation, anyway? Why, it's nothing more or less than helping the other fellow to help you. It's inside play. My men know that I'm strong for them—that I'll give them anything within reason. They know, also, that I hold my job by grace of a board of directors. And their sense tells 'em that if I go to the directors for more money or more privileges for the working force, I won't get what I want unless I'm a *successful* president—unless the company is paying real dividends. So it's up to them to *make* me successful. That's what I mean by helping the other fellow to help you."

"He'd have made a corking evangelist!" I said to myself, and then, as an afterthought, "But he is one."

Evangelists are the expounders of a gospel. John A. Ritchie's gospel is a gospel of labor.

President of the largest motor-coach organization in the country, Ritchie has been writing transportation history with

a bold pen since 1918. In that year he was put at the head of the company that operates the big green "Fifth Avenue busses," with which every visitor to New

York is familiar. The company was slipping toward financial shoals, and it was Ritchie's job to save a smash. Here are some of the things that happened:

In four years he *doubled* the company's annual earnings per mile by increasing the number of passengers from 22,000,000 to 60,000,000. He accomplished this without opening a single new route or putting added busses into operation. This meant that nearly three times as many passengers were using the same equipment. Moreover, he did not make a single change in the personnel of the executive organization he inherited. What is more, he raised the wages of the men under him to make a war-peak scale—and *kept them there*. To-day they are receiving higher pay than any other transportation workers in the country, with the single exception of locomotive engineers.

This accomplishment made Ritchie a national figure; and when a group of Chicago financiers and business men—including members of the Armour and Swift families; John Hertz, president of the

Yellow Taxi Company of Chicago; William Wrigley, the chewing-gum king, and Charles MacCullough, the banker—decided to span the length and breadth of the Middle Western metropolis with motor busses, Ritchie was unanimously invited to put the pretentious program across. He took his new office a few months ago, and since then he has been organizing and developing this huge system, both in the operation and the manufacture of busses.

The Chicago Motor Coach Company's operations, when fully under way, will cover eighty-eight miles of route, about three and one-half times as much as is served by the Fifth Avenue Coach Company, the next largest bus operators in the United States. From "the Loop," its lines will extend south for fifteen miles, west for eight miles, and north for eleven miles. The entire property, with its six hundred and fifty busses, will represent a total investment of more than nine million dollars.

When Ritchie left New York he was

MR. RITCHIE, NEW YORK CITY

JOHN A. RITCHIE AND TWO  
OF HIS MEN

Mr. Ritchie is president of the Chicago Motor Coach Company, the largest motor-bus organization in America. Its operations, when fully under way, will cover more than eighty-eight miles of Chicago streets, and will represent an investment of more than nine million dollars. Born in Halifax, Nova Scotia, forty-four years ago, Mr. Ritchie has worked his way up through the ranks to a recognized position as one of the great transportation geniuses of the present day. After a distinguished career on the Illinois Central Railroad, he became right-hand man, in 1907, to the late Theodore P. Shonts, head of New York City's complicated subway, elevated, and street-car system. In 1918, at Mr. Shonts's request, he took hold of the Fifth Avenue Coach Company. In four years he doubled the annual earnings of this company, which operates the green busses on Fifth Avenue, and he increased the annual number of passengers from 22,000,000 to 60,000,000. As the result of his sensational success in this job, he was called to Chicago a few months ago to take his present post

tendered a testimonial signed by every employee in his organization, a warm and glowing tribute of loyalty and respect. The spirit that prompted that resolution must have gone to Chicago along with him, for one finds a similar enthusiasm among his new employees. This sentiment is really more than enthusiasm; it is a devotion that amounts almost to an obsession. Ritchie used to be a radical union labor man, and he is still sympathetic toward the union idea. But the last two union organizers to visit his men were chased from the shops with monkey wrenches.

"Jack Ritchie is union enough for us!" the men shouted as they hastily retreated.

It's interesting to watch the big broad-shouldered Scotchman, with his engaging smile, as he circulates among the force. Packed away in his extraordinary memory is the first name of almost every man there; and it is that name which he always uses. He has the happy faculty of mingling with the workers, visiting them in their homes, dandling their babies on his knee—and at the same time losing nothing in authority or respect.

"That's because there's no bunk in it," one of the drivers told me.

"This idea that 'familiarity breeds contempt' is all rot!" Ritchie remarked. "It does nothing of the kind, unless the one who is 'familiar' has something contemptible within himself. One's superiority is demonstrated by what one *knows* or *does*, not by a holier-than-thou aloofness!"

"MANY bosses blunder in failing to understand that the laboring man is twice as sensitive as the average college graduate who makes a little more money and stacks up a little higher in the social scale. The workman is sensitive about his lack of education or his lack of opportunity, and unless you meet him as man to man he thinks that you feel above him.

"To express conscious superiority over a man is to humiliate him. You've kicked him in his pride, the place that hurts most. He becomes dissatisfied and inefficient. The foreman, for instance, who is always trying to show off, who impatiently snatches a piece of work from the hands of a laborer and does it himself, is doing more to foment a strike than a whole squad of union agitators.

"The policy of trying to run men according to set rules and regulations is just as bad. In some shops and offices you'll see rules posted up all around—and they're neither decorative nor useful. Human nature is to me the most wonderful, the most mysterious thing in the world, and I've studied it enough to find

out that men can't be covered by blanket regulations. No two human beings are alike; you can't 'herd' them economically. They've got to be treated as individuals, and treated with sense and sentiment. Industrial life won't run without sentiment any more than a home will. We're all creatures of sentiment; otherwise, why our wives and sweethearts?"

"Both in New York and Chicago one of the first things I said to my executives was, 'Now, boys, we're not going to hire and fire. Henceforth, we're going to *engage* and *educate*. Human beings are human beings. Most of them are reasonably decent and reasonably capable. If we can train our men right and keep them

merchandising presents the same difficulties. A woman going into a dry-goods store and buying a couple of yards of ribbon has a chance to see it and feel it before she pays for it. But transportation is different. If the customer is dissatisfied, there is no refund. That's the psychology back of the customary kicks against public service corporations.

"One of the first things I discovered when I took hold of the New York Company was that more revenue was urgently needed. We workers needed it for higher wages and salaries, not to mention the replacing of equipment, and the stockholders needed it for returns on their investment. Since the city refused to let us open new routes, there was only one way to get more revenue. That was to make more people ride with us. How could we do it?"

"WELL, one thing was certain: All that we had to sell was *service*. And if we wanted to attract more people we had to make that service more attractive.

"Our 'Civility Campaigns,' which received rather wide-spread comment, were part of our endeavor to increase the attractiveness of that service. Courtesy is always attractive. Still, it takes more than 'campaigns' to keep up a steady flow of thoughtfulness and kindness. These habits are at their best when they are instinctive and spontaneous. So it was up to us executives to see that our 'salesmen of service'—the men on the busses—were so happy and contented that civility came natural to them. By making a big family affair out of it, we succeeded.

"Moreover, I think that we proved the falsity of the old adage that no amount of effort can make a public utility corporation popular. For a long time we urged our big army of passengers to criticize us. We had rather boasted of the fact that our men were courteous under all conditions; and when you boast of anything it's a direct challenge for wise guys to walk

up and kick you in the slats if they see the slightest opening.

"What happened? In a six-month period, during my last year there, we carried between twenty-five and thirty million persons, and received just *ninety-three* complaints for incivility—which was one complaint for every 280,000 passengers. We investigated these ninety-three complaints thoroughly and impartially. No evidence was disregarded. We found that in sixty-one cases the employee was plainly at fault; in thirteen cases the passenger was plainly at fault; and in nineteen cases the responsibility was divided.

"This improvement kept right on. I notice that in two (Continued on page 120)

## To the Lady Who Complained of Couples "Spooning"

MR. RITCHIE, as a letter writer, is the equal of the late Mayor Gaynor of New York. To a woman who complained of couples "spooning" in the balmy spring evenings on top of the busses, Ritchie replied:

"Where, in this great city of ours, are Bob and Betty to go, safe from the slander of idle tongues, to carry on their love-making? Let us not forget that in the city Betty seldom knows the luxury of a front parlor for the exclusive entertainment of her Bob, as does her more fortunate small-town sister. In the city, the 'best' room is usually the living-room, where, after supper, Dad, surrounded by his family, enjoys his pipe, while Mother 'clears' the dishes. There's no privacy there for Bob and Betty.

"Then in the city there is the absence of the old front porch, with its old-fashioned hammock and clinging vines to shut out the peeping rays of the light on the street corner; the old gray horse—his color is against him—from the nearby livery stable, which is 'in the know,' and with rein around the whip-stock stands without hitching; the old lover's lane on the edge of the town, where the stars are the only critical observers; the moonlight excursion up 'mud-bottom' creek to nearby picnic grounds, and the many other advantages we can recall which the small-town lovers enjoy over their less fortunate brothers and sisters in the city.

"Realizing all these handicaps of the city-bred youth, who can find the heart to deny or criticize an occasional indulgence in innocent love-making—the greatest of all life's mysteries—whether it be atop a bus, in the park, or any other old place!

"No, we don't believe we care to have our conductors run the risk of interfering with such matters. Many times, we fear, they would be more wrong than right."

tight, we'll save a lot of this ruinously expensive item known as the "labor turn-over."

"We stick strictly to this policy. If a man is temperamentally unsuited to be a driver or conductor, we put him in the shops, where the busses are manufactured and repaired. If he doesn't fit in one shop job, we find another one for him. Has it paid? I'll say it has! It gives us about one tenth the average normal turn-over of a transportation company.

"This policy, together with other kinds of fair treatment, keeps men happy and on their toes. I tell you that a man has got to be 'up and coming' to sell transportation to the public. No other kind of

## From Ranch Hand to Millionaire

**N**INETEEN years ago, at the age of thirty-eight, Walter L. Hodges was in debt and hauling gravel at \$2.50 a load. To-day he is a millionaire, having sold his gravel business for \$1,100,000 in cash! He did not strike gold in the river bed, sand-bag a rich uncle, nor make a fortune on a factory site. On the contrary, luck continually ran against him.

In 1903, Hodges was plodding away on a little ranch which he did not own, earning a hard living for the six or seven people dependent upon him. His mother-in-law fell heir to a note for three thousand dollars given by a teaming company. The company could not pay the note, nor the interest. Hodges went to Los Angeles to try to effect some sort of settlement, and got sixteen mules and four wagons for the debt.

"The next thing," said Hodges, "was to decide what to do with sixteen hungry mules. There was no chance to sell them. I did not dare take them out on the ranch, where they would eat their heads off—and ours too. So I began to look around for something to do with those mules, and found a gravel bed down by the river where I could get gravel free. I hired three drivers, got on one of the wagons myself, and began hauling gravel at two dollars and fifty cents a load."

At the end of two years of shoveling and hauling sixteen and eighteen hours a day, Hodges had not made a dollar! But he had become convinced that concrete was a coming product.

"I decided definitely to stick to the gravel business; but I either had to get more for it or haul it cheaper. There did not seem much chance to get more for it. There was too much competition, and men worked for small wages in those days. Then I must get it cheaper. The only way to do that was to find a shorter haul. The spring before, I had noticed as I drove by the Arroyo Seco that a freshet had washed in a large fresh bank of gravel. If I could get that, I thought, every year the high water would fill up with fresh gravel the beds we had shoveled out—a perpetual supply. And it was four miles nearer town, which meant an extra load a day for each team.

"I started out to get that gravel bed.

The owner wanted three thousand dollars for five acres. I looked around for a partner who could raise the money, and found two men willing to go in with me, one of whom was able to borrow five hundred dollars at the bank. We bought the five acres, paid the five hundred down and gave a mortgage due in two years for the balance."

They were closer to the market now and the demand for gravel at two dollars and a half a load was steady. But still the

get the overalls, hurried to a wrecking company that handled all sorts of old machinery, including rubber belting. In three days I had fitted up a long, heavy, movable belt running from the crushing platform down into the arroyo. One man could load more rock onto this belt and have it dumped at the crusher than four could handle before." It was then the business began to show a little profit.

On September 2d, 1905, Mr. Hodges saw in the paper one evening that a contract had just been let for the first concrete bridge in Los Angeles. It justified his faith that the age of concrete was coming; and it was a chance for a big order—the biggest he had ever had. He took his hat and without waiting for his supper caught a street car up-town.

"After two hours' inquiry I finally located the contractor for that bridge. It was ten o'clock, and I was so afraid I was too late, or that he was not at home, that my fingers shook as they fumbled for the bell. But the contractor was at home; he came to the door with a newspaper in his hand. 'My name is Hodges,' I said hurriedly. 'Have you bought your crushed rock for that bridge?' . . . 'Come in.' He did not answer my question direct, but I knew he had not.

"He sat and figured for five minutes. 'I'll need about six hundred loads,' he said; 'and I'll need it delivered right on the dot.'

"I can deliver thirty loads a day, or even more if necessary. And I'm the only man in Los Angeles who can do it.'

"The contractor twisted in his chair at that; I think he knew it, and was afraid I'd hold him up.

"How much do you want for the job?"

"That was one of the most painful moments of my life," Hodges laughed. "I did not know how much he would stand—and yet I needed a good profit on the job.

"Five dollars a load," I answered, after a moment's uncertainty.

"He cleared his throat twice, scratched his head, put his hands in his pocket. I could feel my heart bumping my ribs.

"All right. You've got the job."

Hodges grinned reminiscently: "That contractor afterward confessed he would have paid seven dollars a load, and I confessed I would have taken it at three—so

Nineteen years ago Walter L. Hodges was in debt and hauling gravel at \$2.50 a load. To-day he is a millionaire, having sold his gravel business for \$1,100,000 cash. Read the story of how he overcame an amazing series of obstacles when luck was continually running against him

profits dodged them. There were boulders in the canyon. It was necessary to buy a rock crusher. That year they lost thirteen thousand dollars. But Hodges was not ready to quit. The demand for gravel was good, the supply unlimited—why did the profits leap away?

"For one thing," said Hodges, "it was taking too long to get the rocks up to the crusher. We had no bins into which to dump rock as crushed, and from which the wagons could load without waste of time. We got lumber and built bins. Soon after these were done, I went up-town one day for a new pair of overalls. The department store had just put in an escalator. As I rode on the thing an idea struck me. I jumped off and, without waiting to

I guess that we were just about even."

Next, Hodge's company got an order for gravel and crushed rock for a new auditorium. They had begun to make money. It seemed the right time to expand. He built a large plant outside the city. But machinery was expensive, operating expenses high, and competition fierce. Seven months later, when he was forty-six years old, and had been in the business eight years, he was thirty-five thousand dollars in debt, and losing money!

On Saturday he met his pay roll, and knew it would be the last. On Monday one of his notes at the bank for ten thousand dollars fell due. He went to the bank and asked to see the president.

"Well, what is it?" asked the banker crisply, as he dropped into the chair facing his customer.

"I'm through," Hodges said. "I can't meet my note—I'll turn over my outfit

—machinery, teams, wagons, everything I have. I hope it'll pay off the thirty thousand I owe the bank."

The banker looked at Hodges hard for a moment, then exclaimed, "The dickens you will! How much do you need?"

The banker lent him fifteen thousand dollars more. Hodges paid his most pressing debts, and went out to look for machinery to replace his worn-out steam crusher. He bought a big steam shovel that had been used on a railroad job, and found it would do the work with a zip. Then at last the tide set his way. In twelve months he had paid the bank every dollar he owed and had a surplus. For two years profits piled up. Then a fire swept the plant and caused a \$70,000 loss, but Hodges built a better plant than the one that burned. Next, a tremendous flood swept down the San Gabriel River, and buried the big steam shovel under

30,000 cubic yards of sand. The loss from the flood was over \$80,000.

But after that the business grew so big that losses of a few thousand or ten thousand were merely incidents of the day. In May, 1922, Hodges sold his interest in the business for \$1,100,000 cash.

More than a millionaire in nineteen years; and he comes out of the fight with the robust strength and mental keenness of a man of thirty instead of fifty-seven.

There is not a shade of sham or pretense about Hodges. He is a straightforward, positive, pleasant man with a personality. If you had seen Hodges hauling gravel twenty years ago, you might not have been impressed by his personality, but you would be to-day. This isn't because he has made a million, but because the very atoms of a man are bound to go through a big change in his fight up or down.

WILLIAM H. HAMBY

## The First Woman Guide in Government Service

**A**LMA D. WAGEN, living on the plains near Mankato, Minnesota, as a little girl, longed to get nearer to the mountain tops and dreamed much of the days when she would be able to climb as her soul led, in the gorgeous theatres of nature. To-day Miss Wagen is the only woman mountain guide in America. Every year she guides parties among the mountains for the Government, in Rainier National Park.

They used to call her the "Windmill Climber" when she was a little girl, because she spent her spare time in climbing the windmills on her grandmother's farm near Mankato. She called them her "mountains."

"I wanted to get up among the clouds and to feel myself free as the birds and the air, and to be able to shout my freedom as loudly as I liked without having someone point to me sadly and say, 'It is not pretty for little girls to climb windmills,'" said Miss Wagen.

When she was old enough to break home, ties she went to Washington, and joined the Seattle Mountaineers' Club. She taught mathematics in the Stadium High School in Tacoma in those first days, and spent her first money in outfitting herself with a handy suit of hiking clothes. Then she spent all her spare time in hiking over the mountains. One summer she set out to climb wherever she pleased, and she went from Port Angeles on the Straits of Juan de Fuca to the Pacific Ocean, climbing over the Olympic Mountains en route. She had such a free and happy time on this trip that the next summer she went to Alaska, where she walked from Seward and scouted over the mountains for an entire season.

"It was like the opening of a new life to me," she said. "At last I had found the time and the place to climb, and I climbed hills and mountains and learned everything I possibly could about climbing. Then I looked for new fields to conquer, and in 1914 I walked through the Glacier National Park, and found my life work right in the National Parks. There were places to climb, and I wanted to teach other women the joy of climbing."

Her next trip was a most thrilling one.

Alma D. Wagen, born on the plains of Minnesota, had the zest of the mountain climber in her soul. As a child she climbed the windmills on her grandmother's farm. Later she went to Washington, and joined the Seattle Mountaineers' Club, spending her spare time in hiking over the mountains. Her big opportunity came during the war, when she offered her services to the Government. She has just completed her fifth season as a mountain guide in Rainier National Park.

She walked entirely around Mt. Rainier at the tree line, a distance of more than a hundred miles, ending the trip by climbing the summit from the north side. This is a feat that is very seldom accomplished.

"The usual way," she said, "was by making the ascent from the south around Gibraltar Rock; but by that time I felt that I could climb any mountain that ever reared its head in the air."

The next year she was the guest of the Chicago Prairie Club, and went to Yellowstone to explore the canyons, and to get into the unbeaten tracks that the average tourist never sees when she goes through on a hurried vacation trip. Miss Wagen took her time and climbed everything worth climbing. In 1917 this young nature lover was in the heart of the Cascade Mountains, where she scaled not only Mt. St. Helens, but walked from this point to Mt. Adams. Then she walked to Mt. Hood, in Oregon.

"And there," she says, "I felt the winds blow between the worlds at last, on the snow-capped peak of Mt. Hood. No one but a mountain climber can know the joy it brings to reach the top at last, and to realize that you are alone with the fresh, free air, while you rest and enjoy the view and plan for other peaks to conquer."

When the war took away the men guides, Miss Wagen realized that here was her chance to offer a unique service to the Government. She has now completed her fifth season in the Guide Department of the Government. Her favorite trip is to Pinnacle Peak. She has successfully conducted parties to the Nisqually and Paradise glaciers and on to Camp Muir, which is ten thousand feet above sea level. The Government has just completed a stone hut here which will accommodate twenty-five persons overnight.

"Mountain climbing is the greatest sport in the world," says Miss Wagen. "If I could only make tired people realize the invigorating effects of pure mountain air in tired bodies that are worn with months of intensive work in busy offices! There is no better fun in the world than that of sliding hundreds of feet on the snow in midsummer, when you know the rest of the world is sweltering below you, or to know the wonderful exhilaration of viewing range on range of mountain peaks that rise in tinted ranks against the sky."

Miss Wagen has taken special courses in botany and geology with Professor J. B. Flett, who is called "The Mountain Man," and who accompanies many of the mountaineer parties to obtain data on the flora and fauna of the Park; she makes this her avocation. ELISABETH SEARS

## At 70—He is Still Watching for Opportunities

**I**T IS worth while for you to know how many things you can do that will enable you to earn a living. Some men win out by concentrating on one line of activity. Others are versatile and resourceful, and are able to change from one job to another profitably.

Each must decide for himself which he will be—a specialist, or a specialist plus something else that he can do in an emergency, or with advantage to himself. Much can be said on both sides of the question.

Frank C. Riblet, of Cleveland, is a type of the versatile man, and is still going strong at seventy. Summed up in a sentence, Riblet has been a train "butcher," a locomotive fireman, an engineer, a real-estate dealer, a liveryman, a photographer, and, last of all, he has drilled an oil well in Texas that is making money for the investors.

Riblet was born in Galion, Ohio, where his father owned a general store. He got the idea that he did not have to work. Reverses came and he was told that he would have to hunt a job. After casting about a bit, he became a train "butcher" on a run between Crestline and Indianapolis, on the New York Central. After selling candy, peanuts, and papers for a while he fired on a locomotive. Next he became an engineer. He was in the railroad business for eleven years. All this time he was trying to figure out a way to make more money. He wanted to get into a business for himself. Finally, he went to Cleveland to try his luck in selling real estate. He sold lots and small stores for two years. One of his favorite methods was to trade a lot for a grocery, develop it and find a buyer. He plunged right in and was successful in a small way. Lack of capital hampered him.

One day he went to a livery barn to get a horse belonging to his father. While there he fell into conversation with the owner, who shot this question at him:

"Where can I get a partner?"

"What do you want him to do?" asked Riblet.

"Buy hay and oats, and look after things about the barn."

"What about me taking the job?"

"You might do, if you have enough money."

"How much do you want?"

"You may have a half-interest for eight hundred dollars."

"All right, I'll take it."

When they got down to terms, the following agreement was made: Riblet was to pay \$86 cash—all the money he had; give notes for the balance, and pay the notes off at the rate of \$100 a month out of the business. Each man was to draw \$25 a week for living expenses. Riblet had figured that his share of the earnings would be \$200 a month, which would provide for his \$25 a week, and take care of the notes. He also arranged for buying his partner out as soon as possible.

When Riblet went to the livery barn that day he had no idea of becoming a liveryman. He had never lived on a farm, and did not know anything about horses. But he plunged in and soon became an expert. At the end of five weeks he bought out his partner with borrowed money, and went ahead alone.

His barn was in an alley, and he looked about for a better location. He found it on Superior Street, next to the old Masonic Temple. Another liveryman was doing business on that spot, and Riblet

Frank C. Riblet, of Cleveland, has been a train "butcher," a locomotive fireman, an engineer, a real-estate dealer, a liveryman, and a photographer. Recently he drilled an oil well in Texas that is making money for the investors. All his life he has been on the lookout for "opportunities," and at seventy he is still ready to grasp them. "I've learned to act promptly when I see an opportunity," he says, "for the man who always waits for a 'sure thing' seldom gets anywhere."

decided to buy him out. He turned in three city lots as immediate payment, and notes for the balance. Later, a formidable rival leased the ground from under Riblet, and gave him three days in which to move his horses and buggies. Then Riblet went across the street and took a ninety-nine-year lease on land next a big hotel, and erected a five-story livery barn—the finest in the city.

For over twenty-five years Riblet was in the livery business in Cleveland. Much of the time he carried a bank balance that ran into five fat figures. Then came the need for a change. Mrs. Riblet's health failed, and the doctor said she would have to go to another climate, preferably Arizona. Riblet sold out and took his wife into the Far West in search of health. They lived in Arizona three years. The

expenses of the trip and sundry adventures with gold mines made a nick in Riblet's bank roll; but Mrs. Riblet recovered. When they came back to Cleveland, Riblet wanted to get into the livery business again; but he saw the incoming tide of automobiles, realized that the livery business must go, and that he must make another venture.

One afternoon he started with his nephew to visit a horse show at the Central Armory, and while on the way they stopped at a post-card photograph gallery to have their pictures taken. Riblet asked the young man in charge many questions about the business, and in the course of the conversation the photographer said:

"This place does not belong to me. I wish it did. My boss pays me fifteen dollars a week, but I am worth more. I have notified him that I am going to quit at the end of the week."

"How would you like to work for me," inquired Riblet.

"Are you a photographer?"

"No, but I am going to become one. Do you see that vacant store across the street? I expect to put in a post-card studio over there, and I want you to run it for me. I'll give you twenty dollars a week for a year. How will that do?"

"Fine!" exclaimed the young man. "When do we begin?"

"This afternoon."

Riblet rented the store, and invested seventy-five dollars in a camera and other fittings. His newly employed manager obtained a release from his boss, and within twenty-four hours the Riblet studio was doing business.

Just as he had done in buying a half-interest in a livery barn, Riblet decided to become a photographer without knowing anything about the business.

Riblet was fifty-six when he made this venture, but he acted with the audacity that has characterized him all his life. He made money from the start with his post-card gallery, and for the last fourteen years he has been "official post-card photographer at Euclid Beach." People come in droves to have him take their pictures, and he is obliged to employ half a dozen assistants.

Recently Riblet got interested in Texas oil wells. In place of plunging on stock, he sent a trusted man into the oil country to buy up promising leases. Then he went among his friends and raised enough cash to drill a well. They struck oil the first shot at thirteen hundred feet. Riblet used a peculiar argument in raising capital. He did not make any promises, but impressed upon each one that the risk was very great. He suggested that each one put in only what he could afford to lose in case of failure.

Riblet is a compact, alert, well-preserved man of seventy, who could easily pass for fifty. He talks and acts with youthful enthusiasm, and is just as much inclined to look ahead as any young man of twenty-five. ALBERT SIDNEY GREGG

SOUP MAKES THE WHOLE MEAL TASTE BETTER

Day by day in every way  
We gain in health and vigor  
With Campbell's aid our health is made—  
Just watch us growing bigger!

## Tempting!

And no wonder! That fragrant plate of Campbell's Tomato Soup, which is so tempting to your appetite, is pure tomato—the finest red-ripe fruit that grows! The tasty tomato juices and the rich tomato "meat" are strained to a smooth, delicious puree. A delight to the appetite!

### Cream of Tomato

Golden country butter is blended with Campbell's Tomato Soup and delicate seasoning is added by the skilled hands of our famous French chefs. Serve it as a Cream of Tomato for a very special treat either for the family meal or when you are entertaining. It takes but a few minutes to prepare it according to the simple directions on the can. And it tastes so good!

**21 kinds**

**12 cents a can**

# Telltale Table Manners

(Continued from page 28)

as inaudible, they turn into a kind of performance.

Just take that simple rule for the spoon, for example. You know, of course, that you can tell the sheep from the goats by noticing whether one uses the Front, or the Side Entrance. But exactly why is it that the side, and not the point of the spoon should be put into the mouth?

Simply because it's more graceful. The Front Entrance of the spoon causes the hand to project over the table in an awkward way, and it "features" one of the least beautiful parts of the human body, the elbow. Besides, the soup is less likely to be spilled 'twixt the cup and the lip. Just as Ruskin showed that the most beautiful tools are the most efficient, so are the most graceful motions most effective. In every art, even the art of eating, economy and skill both make for beauty.

At any restaurant, in any home, you can thus tell at a glance the well-bred and the artistic from the uncultured. But you don't have to look for a savage Sword Swallower, eating with his knife, or a meek Shampoo, with his napkin tucked into his neck, or a finicky Fish Feeder, crumbling her bread into her soup, to recognize that such a person is vulgar, or ignorant, or a rustic. There are lesser faults just as revealing.

"**IGNORANCE** of table etiquette," Sharpie told me, "not only stamps a person as socially an outsider, but even in business affairs it often puts a man at a disadvantage. Why, last March, now, I met an oil company promoter from the Southwest. He asserted things about his company that, if true, would enable me to make a lot of money. I suspected, however, that he was bluffing."

"I see. And so of course you invited him to luncheon?"

"No; dinner, of course. At my club. And I made that dinner just as elaborate as possible, too. Several courses. Artichokes, alligator pears, asparagus—three pretty good tests for the tyro—and all the other tricky foods I could get, squabs, for instance. Fruit, too—peaches. Ever realize what a superior strategic position you have when you're the host, instead of the guest? It's a fact. You can study him at your leisure, you see, and so detect any faults or weaknesses or bad habits."

"Well, I soon discovered that this chap wasn't to be trusted. Part of his game, you see, was to pretend to be of a good family. But what d'you think? he used the Touch System!"

The Touch System? Of course I couldn't think of anything but typists, or "touching" him for a loan.

Sharpie though, was used to my playing the stupid Doctor Watson to his Sherlock Holmes. "Why, I mean," said he, "that he touched everything near him. Touched his knife. Kept touching his fork. Twiddled his spoon. Played with his glass. Arranged and rearranged his bread plate and salt cellar as he talked. I had told the waiter, you see, to delay us as much as possible between courses. Get the idea? So, when I saw my man begin to crumble

his bread and mark on the cloth with his spoon while waiting, I knew I had him!"

Poise, I suggested—refraining from every useless or too impulsive motion—might be considered the hall mark of the gentleman or lady. What an actor has to learn, first of all, I believe, is to stand still and let his arms simply hang. "If you don't know what to do," they say, "do nothing!" And the reason I suppose why, at table, one should when not eating keep at least one hand in the lap is only because there they are least noticeable, and one isn't tempted to Touch.

"Oh, it's not merely that he wasn't well bred," protested Sharpie. "He was nervous. When I saw that he couldn't control his hands I knew he couldn't be at ease mentally. His mind was leaking. Wasting force. And so I could surprise him, or frighten him, or embarrass him, as I wished. He said things that he hadn't intended to, and he didn't say things he had planned."

**B**UT if many innocent folk have had manners through ignorance, some there are, queerly enough, who commit faults deliberately, actually priding themselves upon a mistaken finesse. You know the ridiculous pretentious fools who purposely say "between you and I" and "whom" for "who," quite scorning you if you correct them? Well, there are errors committed at the table just like that.

Let us pass lightly with a smile over the lady of the Divorced Digit. That little finger of hers, extended so self-consciously, is an airy attempt at sophistication and elegance. It is the absurd sign-manual of the Would Be. "See that little finger," she seems to say; "ain't I stylish!"

More to be wondered at, however, more overt, more fatuous, is the Table Ostrich.

The Ostrich of fable, you remember, hides his head in the sand, and so foolishly considers himself hidden. Equally illogical is the Table Ostrich who raises a curtain of mock modesty; and, behind a large, white, noticeable napkin, hides an elaborate and always prolonged picking of his teeth.

Now, to pick one's teeth openly, heaven knows, is bad enough. King Edward VII, I am told, used to do it. Selah. Most decent people prefer to grin and bear it. But to wave a white flag over it, so to speak, and make the operation plainly visible across the room, seems to me to be the very Pike's Peak of human folly and vulgarity.

In fact, I wonder if the commoner practice of Home Dentistry—hideous though it is to contemplate that chasing of the tongue around the teeth, so leisurely, yet so assiduous—isn't more excusable, on the ground of ignorance. The Home Dentist doesn't, at least, pretend to be refined. But oh, lord, the contemplative thoroughness of exploration! And then, at last, oh, that delightful discovery and capture of an elusive something lodged in a fascinating cavity! Well, the only adequate punishment would be one that fitted the crime. Were every Home Dentist compelled to watch a colleague fixedly until the last raspberry seed were located, surely

never again would he dare to practice in public view.

Suppose now we put aside the extreme vulgarities, as well as the finer subtleties of table manners. I have eaten in surveying camps with men who combed their mustaches with their forks. I have sat at table with Italians too exquisite to touch even a banana with their fingers, using daintily only the knife and fork. Which I preferred, I hardly dare say. The stevedore, of course, is not trying to behave like a gentleman. But those who make of a meal a social function, however modest, may be supposed to care how they appear.

Culture, you know, has tended more and more toward the disuse of the knife. In polite assemblages it is always dispensed with in the fish course; it is not provided, sometimes, with such tender meats as breast of chicken. Society, as such, also frowns often upon even the spoon. Wherever practicable, it favors the fork. With vegetables its use for cutting is imperative.

Do you, dear reader, ever commit *Vegecide*? Thou shalt not! As with a dagger do you slash innocent, young lettuces? Into the heart of a placid boiled potato do you plunge the cruel knife? Repent! It is social suicide.

But prithee why? If there is a rule that nothing soft (except fruits) should be cut with a knife, there should be a rational reason for it. Well, for one thing, the use of the fork singly, the Bachelor Fork, one might say, makes the eating of vegetables more graceful and less conspicuous, because the knife doesn't then have to be taken up, laid down. But the true reason for this preference, I fancy, is more esthetic. Isn't a potato, for example, when cut by a fork, not only more mealy and toothsome, but also more agreeable to the eye?

**FRUIT**, of course, you do have to pare, usually. No one can possibly quarrel with that. But as for slicing it with a knife well, you may not be so fastidious as I am, but isn't there something about that slick and slippery look that's a bit unpleasant? Let's not be too squeamish. After you've pared and quartered an apple or pear, better bite right in, why not? Even Mrs. Grundy admits that for most finger foods—except the gooey ones and juicy ones—human teeth are best.

Talk about "war to the knife"! Have you ever heard of the "war to the fork"?

"Do you mean to say," a friend recently asked me, "that you'd use your fork in your left hand to eat with?"

"Do you mean to say," I replied, "that you switch your fork from the left hand to the right every time you eat a mouthful?"

And that is the difference, you see, between the American and English customs. In London, if you are invited to dinner, you needn't be at all afraid, while you're holding your knife in your right hand, to pick up food with your fork in the left—when you use it prongs down, that is—lifting pieces of meat, for instance. But in America, beware! It's forbidden by many, yes, even by most well-bred persons.

And so, intelligent Reader, I shall have

to leave it to you. In this American method—laying down the knife, shifting the fork from left to right and back to left, taking up the knife again—aren't there obviously superfluous and conspicuous motions? Isn't simply taking up food with the left-hand fork less noticeable, more easy, natural, graceful? To my mind the constant use of this Lightning Change of the fork in the hands of a persistent Zigzag Eater—watch him eating a steak, for instance—why, it isn't eating so much as juggling.

What can be the real reason for this elaborate manipulation? Undoubtedly the old-fashioned aversion to left-handedness. Perhaps you are one of those talented creatures so born, for every natural left-hander I've ever met has been gifted. But didn't your fond but misguided parents, and your school-teacher as well (with a grandmotherly dislike for everything exceptional and even unconventional), force you to use your right hand?

**B**UT let's come down to something more definite that we can all agree upon. A custom "of so frightful mien, as to be hated needs but to be seen." A habit so widespread that if perchance you should have any desire to study it face to face, all you have to do is to drop into the nearest drug store.

Lizzie-Lick-the-Spoon. Ah, me! See her there, with her strawberry sundae, regarding herself pensively in the mirror? One elbow on the counter, she holds a heaped spoonful of ice cream in the air on a level with and near her pretty mouth. In and out that spoonful goes, and she takes a little lick at every trip. In and out, in and out, while her eyes grow dreamy, in and out, licking a little more, a little more, thinking over her last love affair—in and out. And at last, nothing but a creamy film left upon the spoon, down it goes for more, much more. Then up again, licking, in and out. Talk about conserving food! Your average All-Day Sucker will make one spoonful last for ten timid tastings.

Oh, that spoon, that simple little dangerous spoon! It will tell more about you, sometimes, than the lines on your palm. Look out! Stir your tea with it one minute too long, too eagerly, and you'll never understand why she said "No." Leave it sticking upright in your cup, and your name is Booby.

The Booby Trap, so called because with it you can upset a cup of coffee over the tablecloth with the least unguarded gesture, is an antique custom. In your grandfather's time, though, the Booby Trap was more pardonable. Considerable stirring it took in those days, you know, to sweeten his coffee with molasses; and one could hardly blame the old gentleman for sometimes forgetting to remove his spoon from the cup. But the dangerous practice still survives, that slanting spoon too often sticking up in the air like a railroad semaphore set at Danger. It puts the owner outside the social pale just as unmistakably as dirty hands would, at table.

And so also does Harpooning. Now, quite irrespective of its being a violation of any arbitrary rule, isn't it rather impulsive and conspicuous to reach out over the table with your fork and spear a piece of bread, and so carry it back to your own plate? If it is, then certainly it is bad manners. Why should anyone be afraid

to take it with the hand? He'll have to use his fingers when he eats it, anyway; and, so long as he doesn't touch the other pieces, the easy removal is harmless and less conspicuous.

Harpooning, you see, like many other mistakes, is done merely from a misunderstanding of the fundamentals of propriety. Good manners, I must again insist, proceed primarily from good sense. Surely anything that is eaten from the hand may be taken from the plate with the hand. Therefore well-bred persons pick up olives with their fingers if they wish, even when a pair of tongs is provided for the purpose.

And then—of course you know what the Harpooner does when he has so triumphantly secured his bread, don't you? Yes, you're right. He Mulches it.

Ever hear of those wise fools of doctors who never will do a simple thing if they can complicate it? The Egoistic Eater is like that. His idea of curing hunger is, first of all, to Perform an Operation. And so Mr. Mulcher seizes his slab of bread, and holding it either in the air or jammed hard down upon the tablecloth, he Mulches it. Like a mason applying mortar to a brick wall he smears the entire surface with butter. And then, knowing not that "What is Bitten goes not Back to the Plate," he devours, in progressive, semi-circular bites, the slice in its entirety.

Mulching is inelegant, because it is an unduly conspicuous and unbeautiful process. It attracts the unwilling eye of the beholder mainly because it is so long continued. The Mulcher's preparation of his food is too emotional, too absorbed, too serious. His eating also is awkward; while a fragment of bread, dabbed with butter, may be swallowed almost unnoticed.

**N**OW let's pause a moment. I fancy I hear someone murmuring, "Oh, what's the use of all this finicky fussing? Why not be just natural? We don't pretend to be anything but just simple home folks."

Yes, all right. But why not be home folks of the year 1923, instead of back numbers? You have electric lights in your village, no doubt, and a phonograph in your sitting-room, haven't you? A radio and farm tractor, perhaps. But who had such luxuries fifty years ago? City folk, rich folk—what you perhaps call aristocrats. Who has them now? Why, they're the necessities of your daily life! Don't you see that it's just the same way with manners? Don't you see that the whole country follows the ways of the metropolis socially as well as in every other way? It must advance with the city, or it rots. Fifty years ago would the average small-town boy who had never gone to the city take off his hat to a girl he knew on Main Street? No more than he would then have worn silk shirts and she silk stockings. But the telephone and the motor car have drawn city and country together. Fifty years ago Father poured out his coffee into his saucer to cool it. To-day Mother has doilies and flowers on the table as a matter of course. Why call it "putting on style"? Call it progress, keeping up with the times!

Isn't it a bit antiquated, then, to be a Self-Starter, for example—to begin at the table to eat too soon, eat too enthusiastically, eat away with too obvious and oblivious relish of a favorite dish? All such careless habits are as old-fashioned as the using of snuff.

I knew an old fogey in side whiskers, once, whom they all called Monkey Cheek. Whenever he was surprised in his engrossed private feasting at dinner, instead of swallowing his mouthful first, he would attempt to answer with a lump of food bulging out one side of his face, the way a monkey hides a peanut in his cheek and pretends it isn't there, the way a would-be-respectable tobacco chewer stows away his quid when he meets his pastor.

Oh, well! One might cite forever such Enthusiastic Eaters—the Soup Tilter, and the Seed and Stone Spitter, and the Great American Royme, or Two-Handed Corn Eater (you can always break the cob, you know, and hold half with one hand).

**T**HE underlying principle of the Assembled Meal is the same that inspires other obnoxious performances I have mentioned. To wit: You care a good deal more for the food than for the society at the table. And you show it.

And there we discover the main fault which impels most exhibitions of a lack of manners. Conventionalized good taste forbids at all times any unnecessary betrayal of emotions or instincts. The aristocrat (from whom all manners are derived) satisfies his appetite with graceful deliberation. No gusto, no hurry. Elegance is ease. The unpardonable sins at table, therefore, are greediness and haste. A well-bred person doesn't smack his lips with enjoyment; neither does he gnaw his bones like a dog—Bruno Bones, you know.

A meal at which guests are present, you see, is rightly a dual affair, in which the conversation, the social interchange, should always be the major object and the food subsidiary. Happy he who can with grace manage both at the same time.

If you have tact and observation, though, you needn't worry. Of course anyone unused to formal occasions may, at first, make some inconsequential error. If he has been accustomed to the plethoric tumbler, for instance, or the two-pound goblet of commerce, he may not know how, gracefully, to embrace the more feminine wine glass; and, instead of lifting it properly by the stem, its slender waist, he may grasp it with the popular Equator, or Bust Hug, leaving on it thereby, the marks of his fingers. Or, he may fold up his napkin. He may use the wrong fork.

Still, if he doesn't hurry—if he pays more attention to his neighbors at table than to his plate, he won't go far wrong.

So the main thing is, don't take your eating too seriously. Go easy; watch what the others do. That one warning might save the most unsophisticated diner-out. And, too, consideration for others, self-restraint, dignity, and common sense, those lovely qualities upon which all manners are founded, have an inspiring way, thank God, of shining in the most unexpected places. Men in overalls there are who would need but a hint or two to become finished diplomats. Abraham Lincoln may, in his time, have eaten with his knife, but I'll bet it didn't take him long to fall in with the traditions of the White House.

Indeed, I would venture to say that no person with delicate perceptions and sympathies, with a balanced character and a rich soul, could possibly make himself ridiculous or even criticized—no, not even at the table of a king.

## STRENGTH AND SAFETY IN THE BODY OF STEEL

If you could see the main body structure of Dodge Brothers Business Sedan before the enamel is baked on, and before the interior is furnished, you would be profoundly impressed by its strength.

You would see that every panel, every pillar, and every rib is steel—that even the door sills and window mouldings are steel.

You would see that all of these parts and sections are electrically welded together into one staunch steel body, with no bolts or rivets to work loose, nothing to rattle or squeak or warp.

And you would realize that, like the all-steel Pullman coach, this unique construction—originated by Dodge Brothers for this car—represents the last word in protection to passengers—the ultimate achievement in closed car ruggedness.

**DODGE BROTHERS**

*The price of the Business Sedan is \$1195 f. o. b. Detroit*

Every ScotTissue Towel contains millions of soft Thirsty Fibres, which absorb four times their weight in water. They make ScotTissue the quickest-drying, most satisfactory towels made.

## Thirsty Fibre personifies cleanliness

Millions of Thirsty Fibres are found only in ScotTissue Towels.

These Thirsty Fibres give ScotTissue Towels their pleasing softness, immaculate whiteness, fragrant freshness and quick drying-power, enabling them to absorb instantly four times their weight in water.

A clean, dry, never-before-used towel for every user every time—that's the sanitary story of ScotTissue Towels. A really individual service that assures perfect protection from contagion.

Those who are careful to observe the accepted standards of modern business, both toward patrons and employees, adopt ScotTissue Towels for their wash-rooms. They enjoy a cleaner, safer towel service—a more economical service too.

Stationers, druggists and department stores sell ScotTissue Towels, 40c a carton of 150 (50c in Canada). Less by the case of 3750 towels. Buy a carton or a case today. Or, we will send, prepaid, the towels or \$5 outfit upon receipt of price.

## No Fool Like a Middle-Aged One

(Continued from page 33)

thought she was my grandmother. You flattering child!"

She pouted prettily.

"Of course, I didn't think *that*, but I didn't think she was your wife, either. Why, you're nothing but a great big boy. That's why I think you're so nice."

Dick's face flashed with delight.

"I've a great big boy of my own," he cried. "When you see Dick, Junior, you'll realize how old I really am."

"Old! You don't look a minute over thirty. You must have married when you were very, very young."

Dick didn't deny that. Thirty-two was young; but to-day, slicing and fanning and playing exceptionally bad golf beside this slim strip of a girl, he felt that forty-one—especially when you didn't look it—was even younger.

"Anyhow," continued Marcia, "I like older men. They've so much more sense and charm than boys like—well, Hugh Attaway, for instance."

Dick tugged his cap well over his eyes and said slyly, "You didn't use to think that. Alicia told me last night you and Attaway were once engaged?"

"Puppy love!" she cried. Then, with a shrug of her shoulders, she changed the subject. "Weren't those waltzes heavenly last night? I adore dancing with you, only I wish our orchestra was as good as the one that plays at the Biltmore at tea time. Dancing to it is simply divine!"

"Is it? It's been a long time since I did any tea-time dancing. Seems like a college-boy stunt to me—dancing at tea time."

SHE threw back her head, and her eyes challenged his eyes.

"Well, when you look like a college boy, it's all right to act like one, isn't it? But not, of course, if you feel very, *very* old."

Dick flushed at the insinuation. Seized with a fatuous desire to prove to this young thing just how boyish and daring he did feel, he took up the challenge.

"Well, how about our dancing to this divine music some afternoon?"

"Heavenly!" she cried, but added soberly, "Only, of course, you don't mean it, Mr. Ramsey."

Gazing down upon those red, red lips and into those provocative brown eyes, Dick threw caution to the winds.

"Of course, I mean it, silly child!" he declared, clasping the slender hand held out to his. "Only, if you don't want me to feel very, very old, you must promise, while we're dancing at least, to call me Dick."

She laughed, a cool, young, and assured response. Squeezing his fingers slightly she said:

"All right . . . Dick."

The way she said it charmed him. It was as if she, who was so young, had discovered in him some kindred quality which made him eligible to her comradeship. More, it was as if she had recognized in him that youthful quality of mind of which he, himself, was so conscious.

# We Save Men

## Ten years every morning

By V. K. CASSADY, Chief Chemist

### GENTLEMEN:

Do you know that Palmolive Shaving Cream is now used by millions?

Three years ago we chemists were still working to perfect it. Now it is famous almost the world over.

And it is saving its users every morning, we figure, about ten years of time.

#### *Made to please*

This is its history.

Here is a soap laboratory 60 years old, famed for some great creations. One is Palmolive—now the leading toilet soap of the world.

We found that shaving soap could be vastly improved, so we started to work on that product.

#### *Asked 1,000 for advice*

First we asked 1,000 typical men what

they most desired in a shaving cream. The five things they agreed on are cited in this ad.

Then we worked 18 months. We made up and tested 130 formulas, to meet those desires to the utmost.

#### *'Twill be your choice*

Now we have a shaving cream which every man will choose when he knows it. Tens of thousands have taken the pains to write us to this effect. And not one user, so far as we know, has ever changed to another shaving cream.

Now we ask you to try it—you who have not done so. We have made this to please you, and it will. Give us a chance to show it. Send the coupon for a ten-shave test. Cut the coupon now.

## PAIGE & JEWETT

Charles — of Iowa writes me: "Dear Mr. Jewett—I had \$2,500 last year when I began with your cars in this town of 5,000 people. Today I am worth \$5,000, have a real business, and drew more last year than I ever earned on a salary."

## Earn \$5,000 to \$50,000 a year

This advertisement is addressed to every man in America whose ability and ambition qualify him to succeed in business for himself or with a good partner. We have hundreds of openings right now for such men. Right in your own town, or near-by, such an opportunity likely exists—even if we have a distributor or dealer already established. Please read every word of this advertisement. Then write me personally. Although we have nearly 2,000 Paige and Jewett dealers and distributors, I can find a place for you—if you are an ambitious, able man—to grow rich in business for yourself.

### Openings Now for You with Investment as low as \$1,000

Paige and Jewett merchants frequently start with as little as \$1,000 capital. With this they do \$30,000—\$40,000—even \$50,000 a year business. Our liberal financing plan makes capital of less consequence than character and energy. Handling Paige and Jewett you need little capital, because you turn your capital so fast. No other retail business permits a man to turn his capital so fast. Profits come from small margins on big volume—which is sound business. And this fastest growing of all industries needs good business men, able salesmen, small capitalists. It offers them the world's most profitable opportunity to get into business for themselves.

### Paige and Jewett—the Ideal Foundation

Read our advertisement about the Jewett on the opposite page. Read it twice, and see if you know any car that can match the Jewett in quality and performance, at anywhere near the price. In less than a year after the Jewett was introduced, we had sold more than 25,000 cars—a world's record, we believe, for a new car at this price. Surely you could sell such a fine six-cylinder car at \$995. And some Paige cars, too! For Paige is one of the three largest-selling high-grade Sixes—a leading fine car today, and costs only \$2,450.

Lots of men who have gone into the automobile business have not succeeded because they did not

Henry R. — of Ohio writes me:

"Dear Mr. Jewett:

You used to be in the coal business, and you told me when I started handling your car in this coal-mining town 10 years ago, that it looked like pretty lean pickings to you. You remember I had only \$250. So I thought I would write you that my January 1st statement shows I am worth \$100,000, and I have made every penny of it handling your cars in this town you thought wasn't a good field to sell in."

pick the right cars or the right Company. This Company has been established since 1909. It has been continuously under the same officers and the same directors. Last year we did \$38,000,000 worth of business. You will be in right if you are a Paige and Jewett distributor.

In a Middle Western city there are three hustling young men who started with our cars five years ago with only \$15,000. They have made a good living all the time, and are drawing handsome salaries today, and their firm is worth \$200,000!

### Four Kinds of Men are Wanted

1—The capitalist, small or large, who wants to own or be a silent partner in a profitable business that will add rapidly to the money invested and earn its own capital for expansion. We can point out literally hundreds of opportunities for investments up to \$50,000. We can help you get the organization and men needed for success.

2—The business organizer and manager gets ahead fast as a Paige and Jewett merchant. If you are such, we can put you into this profitable business for yourself and help you find additional capital if needed. Also the salesmen and mechanics needed.

3—The go-getter salesmen—successful with life insurance, specialties, office equipment—with or without motor car experience, makes an ideal Paige and Jewett dealer or distributor, with the right office man and service man to back him up. If you are a pace-setting salesman put your time into building a future for

yourself. If you haven't got the money, we can get it for you, and the other men you need.

4—The capable service manager is often the cornerstone of an automobile concern's success. If you are good enough in this work to deserve to be in business for yourself, alone or with a partner, tell us about your experience. We can help you get located and help you to a future as big as you want to make it.

Remember these opportunities exist nearly everywhere—very possibly in your own town or near-by—even if there is already a Paige and Jewett dealer or distributor there. When you write me, say [1] which of the above four classes you are in, and [2] where you prefer to locate, and [3] how much capital you want to invest. Please address me personally.

H. M. JEWETT, President

PAIGE-DETROIT MOTOR CAR COMPANY • DETROIT, MICHIGAN

Manufacturers of Paige and Jewett Motor Cars

At home, though he had ample opportunity for doing so, Dick did not mention his tea engagement for next Wednesday with Marcia. This was not due to fear of Alicia's displeasure, for Alicia was too broad-minded to object to such a harmless adventure. He knew she wouldn't mind, but somehow he disliked the idea of bringing her in on it.

The meeting he had anticipated surpassed in realization even what he had hoped for. In a big picture hat, caught up on one side; in an odd black frock with a wide white ruff about the neck, Marcia was arresting: Dead white skin and poppy lips; slanting, sleepy eyes, above which dark brows curved in a slim, perfect arch—Marcia had had her eyebrows plucked—a voice which dripped words, smooth and golden as honey; a slender, lithe figure, which fairly melted in the dancing embrace; feet which glided insinuatingly; hands that clung to one's arm—such was the glamour and youth of Marcia!

Dick's eyes devoured her. She went to his brain like a brace of prohibited cocktails. He felt proud, pulsant, exultant. He felt as frolicksome as young Attaway, who had chosen this same afternoon to swirl with Mrs. Farnham at the Biltmore.

"Rather nice dancer, Attaway," he said patronizingly; and he grinned when Marcia said:

"He can't compare with you."

"Now you're flattering me," he returned, serene in the belief that she meant every word.

FROM that moment, he was her plaything; and the fact that Alicia was called South to the bedside of a stricken sister gave Marcia ample opportunity to pull the strings and press the button and see her plaything jump. They motored, danced, dined, and golfed, sweetly oblivious of the extent to which Green Lawns, New Jersey, was scandalized.

"Ramsey's making a thoroughgoing ass of himself," was Bob Payne's disgusted comment. "No fool like a middle-aged one. As steady and fine a chap as ever lived, and then all of a sudden—bloody! What in the Sam Hill has come over him, I'd like to know."

Janet, with ironic lips, supplied the answer: "Second youth. When he was working hard he didn't have time to remember that he was a faun. Marcia's simply flattered to the eyes by Dick's attentions. He's flattered to the brain by hers. They don't care a fig for one another. One's so young it's painful, and the other thinks he's so young it's more than painful—pitiful. It's a joke!"

Bob puffed out a cloud of smoke, and growled, "It beats me. What's the little minx's game? What's Alicia going to think when she hears the talk?"

"She probably won't hear the talk," Janet replied thoughtfully. "People seldom do when it's about them."

The same train that brought Alicia home brought a new resident to Green Lawns, a widower from Texas.

"We got to talking on the way out from town," Alicia told Dick that night after they had come from hearing prayers in the nursery. "He's bought the Johnsons' place, that beautiful estate overlooking the club. His name is Quentin. He has a son and daughter—both in college. Made

## What Jewett gives you for \$995!

**O**VER 25,000 Jewetts eagerly purchased in one short year! Purchased on facts of design and performance amazing in the thousand-dollar field. For example, Jewett Six at \$995 gives you—

**THE STURDIEST CAR OF ITS SIZE OR PRICE,** whether four or six. Weighs 2805 pounds—200 pounds more than “light sixes.” Has a husky six-inch frame with wide top flange, in-built corner braces and four sturdy cross-members. High-duty Paige-Timken axles front and rear. A car you know will stand up for years.

**THE LARGEST MOTOR** in a medium-sized car. The Paige-built Jewett Six motor of full fifty horsepower fills the hood! Compare with other cars of Jewett’s size or price. Jewett’s moderate engine speed insures reserve power that tedious hills and soft roads never tax. Also it delays wear and makes a long-lived motor.

**MOST POWER FOR ITS WEIGHT.** Jewett’s 50-horsepower motor has 249 cubic inches piston displacement. The car weighs 2805 pounds. So Jewett, in spite of its husky strength carries but 11½ pounds of weight to each cubic inch piston displacement. Comparable cars carry 14 to 16 pounds. That’s why Jewett performs so much better.

**THE BEST-OILED MOTOR** in a moderate-sized car. Hollow crankshaft, high-pressure system forces 2 gallons of oil a minute through all main and connecting-rod bearings. Steady oil-stream defeats friction and cools bearings. The Jewett motor is insured a long life—and however tough the going, will not overheat.

**BEST-PERFORMING CAR IN ITS CLASS.** Jewett Six hill-climbing records, the country over, are common knowledge. Jewett accelerates from 5 to 25 miles per hour in 7 seconds. It goes 2 miles an hour in traffic, or 60 on the highway—in high gear. That’s Jewett performance, because it has ample power.

**EASIEST-HANDLING CAR YOU EVER TRIED.** The new Paige-type clutch has a driven member one-third the usual weight; adjusts itself to speed changes readily. So you can shift gears as fast as hand can act—without miss or clash. Even from high to second, at 30 miles per hour. And this clutch with six springs instead of one engages so gently that you cannot stall the motor nor jerk the car.

Ask the Jewett dealer to show you this amazing car. Put it through its paces yourself. Jewett Six will stand comparison with any car, yet the price is only \$995!

## A Ford Story from Texas

*What bad roads and low speed taught this hustling salesman*

A SALESMAN in Greenville, Texas, travels for one of the big tire companies. In much of his territory the roads are unusually poor. Occasionally he must travel for miles in low speed. He used to burn out a bearing about every two months.

Every eight months his employers found it necessary to replace his used Ford with a new one.

In 1921 another new Ford roadster was given him. Then this salesman began to use Gargoyle Mobiloil "E."

"E" won—as usual.

After one year with "E," he reports: The car has run approximately 26,000 miles. Not a single bearing has been replaced. Not a single spark plug has been removed.

And the cost of lubrication has been cut to a third of what it was on his former car.

The unusual growth in the use of

Gargoyle Mobiloil "E" throughout the whole country means only one thing: *The proof of the oil is the using!*

While your engine is warm, draw off your old oil and refill with the proper amount of Gargoyle Mobiloil "E."

Send today to our nearest branch—or ask your dealer—for the booklet, "Your Ford—Four Economies in its Operation."

For the differential of Ford cars use Gargoyle Mobiloil "CC" or Mobilubricant as specified by the Chart of Recommendations.

IN BUYING Gargoyle Mobiloil from your dealer, it is safest to purchase in original package. Look for the red Gargoyle on the container.

The Vacuum Oil Company's Chart specifies the grade of Gargoyle Mobiloil for every make and model of car. Gargoyle Mobiloil "E" is the correct grade for Ford's. If you drive another make of car, send for this booklet, "Correct Lubrication."

VACUUM OIL COMPANY

money in the oil boom at Wichita Falls. Rather a dear in a bluff, whole-souled way. We must have him over to dinner soon."

Dick nodded absently, agreeing to the suggestion in the preoccupied manner which Alicia had already noticed several times since her husband had met her at the train.

When Tom Quentin was invited to dine, Sally Farnham was asked, too, in order to make a foursome for after-dinner bridge.

Mrs. Farnham thought it was too sweet of Alicia to want her. To show her gratitude, she was at her charming best throughout the evening. Looking a cool and untouched thirty, she laughed, sparkled and chatted, outdoing even Alicia in efforts to make Mr. Quentin feel at home.

"I know what it is to be lonely," she cooed, failing to return Dick's lead and thereby losing game and rubber. "In this big, big world, nothing counts like friends, true friends. . . . Mr. Quentin, don't you think so, too?"

Mr. Quentin did think so. "Right you are, little lady," he agreed.

"And to think you're going to live in that big, big house all by yourself. It does seem a pity," she purred on, playing an ace where she should have finessed the queen. "Don't you think it's a pity, my dear?" She turned to Alicia.

But Alicia, who was now her partner, and who had a keen interest in good bridge, put down her cards and said:

"What I really think is that it's too warm an evening for cards. Suppose we go out on the terrace."

"Well," grinned Dick when their guests had said good night and motored off together, "he may as well buy his marriage license. He's lassoed. They couldn't be cleverer with the lariat out West than little widow Farnham is right here within hailing distance of effete New York."

A GLINT of quick humor crinkled the corners of Alicia's gray-green eyes. She slipped her hand through Dick's arm.

"I'll wager myself," she returned gayly, "that he won't be living in that big, big house alone very long."

Nor was he. A few days later young Attaway awoke to the grim and disillusioning realization that he had been quite definitely shelved by Mrs. Farnham, and a few weeks later he was one of a small gathering to witness the quiet little wedding in Mrs. Farnham's home.

He had been invited by telephone.

"I do want you, Hughie dear," Mrs. Farnham gurgled. "You've always seemed just like my own dear little boy."

Hugh wanted to cry out hotly that she hadn't always treated him as if he were her own little boy. But he didn't. He went to the wedding and sat through the ceremony, a grim-visaged, beautiful youth with hurt eyes and lips that twitched in the white mask of his face.

At the reception that followed, however, he was the gayest of the gay. He capered about and laughed a great deal, and made light fun of finding the ring on the ribbon which he pulled from the wedding cake. When the beaming pair drove off, he showered them with rice and tied a white slipper to the car. He'd show 'em he didn't care!

It was surprising how little he really did care. His very wise mother, who had

## In Society since 1842

We like to think that the growth of Whitman's, from the little shop in Philadelphia in the time of President Tyler, is due to the bed-rock devotion to quality on which this business is founded.

From the fair shoppers in 1842, drawn in quaint Victorias, who called at the Whitman shop, it is a far cry to the thronging thousands who now buy Whitman's Chocolates every day in every town in America.

In stage coach days folks from New York, Boston and Richmond always took home Whitman's when they visited Philadelphia.

Now the Whitman quality, with the modern improvements and infinite variety, can be had conveniently in nearly every neighborhood in the land.

The names Sampler, Salmagundi, Fussy, "1842", Super Extra, Pink of Perfection and Pleasure Island are full of significance for candy buyers. Each stands for the satisfaction of a special taste in confections.

Simply look for the Whitman sign on the selected store that is agent for the sale of Whitman's Chocolates.

*"Select Proper Foods From the Grocer and You Won't Need to Hunt Vitamins at the Drug Store," say Medical Authorities.*

The importance of the vitamin element in food, to promote growth, health and energy, is well established.

Grape-Nuts contains vitamin from the wheat berry—brought to you as Nature intended it to be used. The addition of cream or milk gives a further supply of vitamin to this splendid food which for more than a quarter of a century has been famed for its nourishing, health-giving qualities.

The iron, phosphorus, and other mineral elements so necessary for adequate nutrition, together with roughage to promote healthful regularity are included in Grape-Nuts.

Crisp and naturally sweet, Grape-Nuts charms the appetite, and digests easily. It is ready to serve from the package, and is truly economical because a moderate quantity provides an unusual amount of nourishment.

## Grape-Nuts

Battle Creek, Michigan

raised no objections to his constant attentions to Mrs. Farnham, who had, in fact, joined with sweet and ready accord in his every praise of her, helped him to realize that.

About the time Hugh, through his mother's diplomacy, was beginning to regard his past attentions to Mrs. Farnham as acts of chivalrous and impersonal gallantry, Dick was noting a change in Marcia.

One night at the Country Club, he accused her ruefully: "I don't see you much these days. Getting bored with your chum?"

Marcia colored.

"Of course I'm not, you big silly, but, well . . . that is, your wife's home now, and anyhow"—she hesitated—"people are talking about us, Dick."

His eyes flew wide at that.

"Nonsense! Why should they?" he cried.

Marcia pulled her hand away from his and said slowly, with downcast eyes, "But you're married, Dick, and"—she hit on a felicitous thought—"Mother doesn't approve."

He glowered. Dash the gossips, anyway. Why, they were nothing but two kids together! Being young wasn't a crime, was it?

"But what does Mrs. Ramsey think?" queried Marcia, suddenly conscientious.

Dick stared at her. "Why, nothing, of course. What could she think?"

He captured Marcia's elusive fingers again. "Then it's the talk that's keeping you away from me, not the fact that you're bored?" he pursued eagerly.

Marcia withdrew her hand. She laughed, and rose.

"You big silly!" she cried again. "Of course, I'm not bored." She moved away from him, light and pliant as a lily. "I've got this dance," she explained over her shoulder.

He watched her go. Youth! He loved youth. He had an ominous feeling that he was losing it forever as she swayed for an instant in the doorway.

"Don't forget mine's the next!" he called.

**B**UT she was not to be found for the next dance, nor yet for the sixth, which he also had with her, and he wandered disconsolately through the crowds, his eyes seeking her slim, sprite-like form.

"Looking for someone, Dick?" said a voice at his elbow.

He turned about with a quick start and looked into Alicia's eyes, which spoke to him faintly of amusement—or was it sadness? He could not tell which. Flushing, he shifted his gaze, and said, "I had this dance with Marcia."

Alicia's brows quirked in the uneven arch that had charmed him in their courting days. It gave him a sense of guilt.

"Marcia?" she intoned.

"Miss Adams," he explained in confusion, and again flushed to the roots of his hair.

"Ah, I see, Miss Adams, of course." She smiled. "I saw her with young Attaway a moment ago. They went toward the veranda."

She moved away, light as a blown leaf. Dick followed her.

"Are you dancing this time?" he asked, suddenly conscious of the fact that he had

*The Good*

# MAXWELL

Good Maxwell manufacturing is scientifically organized, down to the last man and the last detail of every department, with one and only one object in view. That object is to put so much

more into the car than the public has been accustomed to getting that any one can recognize the superiority under the hood and in the chassis, in appearance, performance and running cost.

Cord tires, non-skid front and rear; disc steel wheels, demountable at rim and at hub; drum type lamps; Alemite lubrication; motor-driven electric horn; unusually long springs; new type water-tight windshield. Prices F. O. B. Detroit, revenue tax to be added: Touring Car, \$885; Roadster, \$885; Club Coupe, \$985; Four-Passenger Coupe, \$1235; Sedan, \$1335

## Like a Nut

### Wheat cells must be broken

There is food in a nut, but the shell must be broken to get it.

So with wheat. There are over 125 million food cells in a kernel, which must be broken to digest.

That's why Prof. A. P. Anderson invented Puffed Wheat and Puffed Rice. The grains are steam exploded—shot from guns. And every food cell is thus blasted.

#### The ideal foods

That fact makes Puffed Grains the ideal form of grain food. By no other cooking method are all food cells broken.

In Puffed Wheat and Puffed Rice, digestion is made easy and complete. Thus every food element feeds.

#### Flimsy, flavory bubble grains

This also makes whole-grain foods tempting. Puffed Grains are like bubbles, flaky, airy, thin. They are puffed to eight times normal size—made four times as porous as bread. The grains crush at a touch and melt away into almond-flavored granules.

Millions of children are better fed because this process made whole grains delightful.

## Puffed Wheat Puffed Rice

Serve Puffed Wheat in every bowl of milk. It forms a practically complete food. Induce your children to eat more wheat, more milk, by making them outgoing.

This is the finest breakfast food children ever eat. Mix also with your fruit. House with malted barley for lovely nutrition after school.

not done her the courtesy of looking after her program before he initialed his with M. A.

"Yes, with Mr. Quentin," she said, and her voice threw a cool mist between them. "There he is now!" she cried, and stepped forward to meet the bluff Texan.

Dick winced as he heard her gay laughter, and his thoughts became incoherent.

"Ah, I see, Miss Adams, of course." Why, of course? Why that odd little look in her eyes? Why the cool mist that crept so chillingly from her quiet tones? Had Alicia heard the gossip? Did she misunderstand? He felt resentful.

It was the hot, unreasoning anger of youth toward those who are unmindful of youth's fine, fresh raptures which burned within Dick as he went seeking Marcia. He wanted Marcia terribly. She, unlike Alicia, was young enough to understand.

His search for her took him to one side of a palm-screened corner of the veranda. Here, he paused for a moment to look out on the moon-shot expanse of a little lake. Standing quietly there, he heard voices, young voices, protestant, arguing. One of the voices, Marcia's voice, was speaking his name.

"Dick Ramsey? That old thing! He's my idea of nothing at all. Why, he's old, Hugh. He's thick and gray. I'm so tired of him I could die."

"But, Marcia, why—"

"Just to get even with you for going with that hateful old widow." She gave a cruel little snicker. "My, but he's easy! I kept telling him how young-looking he was till I actually got him to believing he looked like a two-year-old. The silly old thing! Why, I'd never have given him a glance if it hadn't been for you and that widow."

"Darling!"

THERE were murmurs as of young vows exchanged. Then Hugh's voice rose masterfully: "Not a day later than November, mind you!" A chair scraped backward. "Come on, sweetheart. They're playing 'Love Nest.' " He laughed happily. "I want to dance to that now we're going to have a love nest of our own."

Stunned, numbed, jarred to his very core, Dick stood, stone-like, long after they had gone. Something precious—his faun-like ideal of himself—had been snatched away. He felt thick . . . gray . . . old.

"Dick?" Alicia's voice was calling him. He looked down into her eyes. How long had she been standing there? Long enough to have heard? Somehow he didn't care. With a dispirited gesture he swept his hand across his brow.

"I'm tired," he said. "Let's go home."

He did not speak on the way home, though Alicia chatted gay nothings, relating something droll Quentin had said. He was thankful for her chatter. It made his own silence less obvious.

At the house they separated. He went to his dressing-room, she to her boudoir. He took a long time to get into his lounging robe. Finally, Alicia called him, and he went into their bedroom to find her, charmingly kimonoed, sitting in a big wing chair.

She held out her hand, and he sank blindly on penitent knees at her side.

"Tired, dear?" she asked, her fingers in his hair.

# It's a - Burroughs and yet it's - only \$125

**T**HIS inexpensive machine puts another brain into your business to add up cash sales, to add and check charge sales and to relieve your brain of many other figuring jobs. That is how thousands of Burroughs Machines quickly save more than enough to pay for themselves in every sort of business from the biggest bank to the smallest retail store.

Any investment you make in any size or type of Burroughs Machine will pay you a profit. Burroughs terms are so easy that a Burroughs usually pays for itself before the user has had time to pay for it.

**THE BASSICK MANUFACTURING COMPANY**

2640 N. Crawford Ave., Chicago, Illinois

Alemite Products Company of Canada, Ltd., Belleville, Ontario

His face against her knees, he cried, "Oh, Alicia, I feel so old!"

She bent over him, fragrant as a kiss. "Why, Dick, what nonsense! You're nothing but a boy!"

He lifted his head, searching her eyes. But he saw no amusement in them. They were lighted with sincerity, love—and a great truth. It came to him that to behold his own best and truest reflection a man must see himself through the eyes of a woman's love.

Suddenly his sense of shame and humiliation lifted. His arms went about Alicia. She drew his head to her breast.

"Sweetheart!" he whispered; and she answered him: "My own dear little boy!"

## Stella Dallas

*(Continued from page 65)*

Laurel gave a little shrug. "You see."

"Yes. I think I see," said Helen slowly.

"I thought it was for me she gave Father the divorce, so I could come and be with you. And it made me glad. It made me proud. But I was mistaken. It was for him. It was to marry him—that creature. He's her kind, down underneath. She is his kind. She chose him. Father's right. The others are right. I'm the one who's been wrong about her all this time. Oh, Mrs. Morrison, she's killed my respect for her, and she knew she would—we have been quarreling about that man for weeks—she knew she would! But she didn't care. She didn't care." Thus pitilessly Laurel sunk her sharp young teeth into the hand that hurt.

Helen murmured, "Greater love hath no woman than this."

Laurel didn't hear her. "I'm very unhappy, Mrs. Morrison," she stated dully.

Helen replied, "You are very tired. You need sleep. Does it hook behind?"

VERY tenderly, as if she were handling a precious body from which life had departed, Helen unfastened Laurel's dress. She slipped it off her shoulders. It fell to the floor. Bare-armed, bare-shouldered, a shiver ran through Laurel, like a breeze rippling a docile sail. Helen put both arms about her shelteringly.

"Oh, Mrs. Morrison! Mrs. Morrison!" Laurel cried out at the touch, and suddenly the storm broke, the long withheld flood burst, the boat tossed, the sail strained and pulled. But Helen's hand was firm and steady on the tiller. She held Laurel close.

"That's right. Cry. You'll feel better. Cry. Cry."

Later in the morning, she would show Laurel the rainbow.

The proof that Helen's rainbow was real, no illusion, no mirage, came in the form of a shadow the following fall. It is dark by five o'clock in the afternoon in New York in November. Returning one late afternoon with Laurel from a tea, where with a dozen other girls of her own age she had been "assisting," Helen observed, as she left the car and crossed the sidewalk to her own door, a shadow, a stationary shadow, cast upon the sidewalk.

There was an alley running down to a rear entrance at the spot where the shadow

The Mark  
of Quality

Robert Owen, business man and philanthropist of the early nineteenth century, was the originator of the personal trade-mark. He put his name on every package of yarn he made, saying, "I'm proud of my goods and I stand back of them with the best thing I own—my name!"

Robert Owen's creed by which he won great business success, was, simply, this:—"I have found that the best way to look out for No. 1 is to look out for No. 2."

## The Covenant in the Name

**I**N the markets of the world today there are names which carry the weight of written agreements. To the buying public they represent the maker's personal contract to maintain the highest standards of quality.

This desirable public acceptance must be guarded unceasingly by the manufacturer if his vantage ground is to be preserved.

The Firestone organization is keenly alert to the responsibilities as well as the rewards, in the ratification of the Firestone name by car-owners everywhere. The public, expect-

ing more in Firestone Cords, is given more for the money.

The thousands of expert workers, employed in the building of these fine tires, are fully conscious of the covenant made under the Firestone pledge of Most Miles per Dollar.

With production facilities and working conditions conducive to the most efficient effort, they have brought the Firestone Cord to its present high point of perfection—fulfilling the trust imposed in this name by so great a following.

*Most Miles per Dollar*

# Firestone

*He came to me with a plan —*

"Well, I've picked the man to take my place. You remember Wilson? A year ago he came to me with a plan urging its adoption, and promising that it would

- reduce our inventory 25%
- lower our production cost 15%
- increase sales 20%
- speed office routine 10%
- decrease clerical expense 30%
- reduce past due accounts 50%

"He has made good on every promise and in some cases exceeded his original estimate. That man has vision. He recognizes the direct relation between investment and profit. He'll make a tremendous success."

"You refer," said one of the directors, "to that change in our records? Was Wilson responsible for that?"

"Yes, he worked out the whole plan with visible equipment, —Acme Visible Equipment. It puts facts at your finger tips and in an almost human way brings out the unusual conditions so that the proper action may be taken."

.....

The accomplishments of Acme equipment are available to you. Our Record Service Department is equipped to give you specific suggestions for obtaining these results.

A letter detailing your problem will bring definite information.

ow fell. Once inside the house, Helen had mounted to an upper room and, raising the drawn shade in a bay window, gazed down into the alley, just back of the spot where the shadow had lain.

There was no one there now.

Quickly she turned and raised the shade of the window opposite. This window looked toward the rear of the house and commanded a view of the narrow, ill-lighted tunnel, along which towered the high, spiked walls of several scores of rear entrances. Proceeding along this tunnel, closely skirting the high spiked walls, Helen could make out the outline of a woman, a short, stocky woman. Twice she stopped and looked back at Helen's roof.

Helen's first impulse was to raise the window, to call. She hesitated. It might not be she. The alley lights were dim and far away. And if it proved to be, was it wise to establish communication with her when she was taking such pains to avoid it? No. Laurel's mother knew best. The minute she became even a recognized shadow in her child's life, she ran the risk of defeating the object of her sacrifice.

Laurel believed her mother was somewhere in South America, and submitted without protest to the futility of locating her, submitted, too, without protest to the futility of breaking her determined silence. If she even suspected that her mother was near by, in hiding somewhere, watching, looking on, in the old, eager, anxious way, she would not be content till she had found her; and if she found her, and if it proved indeed that it was as Helen had persuaded her to hope, that her mother had married Alfred Munn for *her* sake, as likely as not, no, more likely than not, Laurel would insist upon returning to her mother under whatever circumstances. She was capable of it.

LAUREL was almost her old self now. She smiled again, laughed again, shone and glowed again, over old delights and joys, over new delights and joys. Occasionally, the troubled, hurt look would steal across her features. And at such times, Helen knew that Laurel was doubting again, suffering again, longing to be brought face to face with actual proof of her mother's high motive. But it was better that the doubts should remain than that her mother's act of self-abnegation should be robbed of its fruit. Helen pulled down the window shade, and went downstairs.

It was not until she was in her own room with her door closed, with the window draperies drawn close, seated before her dressing table brushing her shining hair that she thought about the alimony. Stephen had felt just as she had, when she first broached the subject to him, that of course Laurel's mother must live as she was accustomed to live, whatever had been the terms of the divorce. So far however, Stephen had failed to establish communication of any sort with Stella. She had left her Boston apartment as a bird a nest, and the route she had taken was as trackless, as scentless as the bird's through the air.

She had left no trace of any kind, anywhere, not even with her lawyer, not even with her bank, from which she had withdrawn her account. Since her marriage to Alfred Munn not a single check of

## Follow his example—

### Uncle Sam paints *his* property regularly

UNCLE SAM has been in business long enough to know that property that is not kept up, runs down. Here is what he wrote us from Washington about his mail boxes: \* \* \*

"All postmasters are required to make periodical inspection of street letter-box equipment, and to report to the Post Office Department when it is in need of painting or repairs. The Department supplies the standard green paint, and the postmaster is authorized to hire local painters.

"As to frequency of painting the letter-

box equipment, it is found that while the equipment in some localities requires painting more often than in others, as a rule, painting *once a year* is found to be sufficient to fully protect the equipment. Undoubtedly, painting at regular intervals lengthens the life of the equipment."

\* \* \*

Uncle Sam is right. State governments, municipalities and private citizens take notice.

How often do you "save the surface" of the property you own? Save the surface and you save all.

It costs more not to paint than to paint. Rust and rot go on till you check them. Paint and varnish NOW, or you'll pay far more, later, for repairs and replacements. Don't put it off—put it on.

#### SAVE THE SURFACE CAMPAIGN

507 The Bourse, Philadelphia  
A co-operative movement by Paint, Varnish and Allied Interests whose products and services conserve, protect and beautify practically every kind of property.

"Save the surface and you save all" — *Paint & Varnish*

## Your straw hat should be comfortable

**M**OST MEN part with a soft felt hat as reluctantly as with a pair of shoes that have grown old gracefully.

But changing from felt to straw needn't be a painful process. It isn't for the man who wears a Knox Straw Hat. The Knox hat conforms to the shape of his head; it feels comfortable.

On balmy days when your dress is precise in every detail, you'll be proud of your Knox Straw Hat and more, too, you'll appreciate it thoroughly for its comfort.

THE KNOX  
"COMFIT"

A few rows of fine soft braid make this straw hat self-conforming. Once on a man's head the "Comfit" makes its own selling argument. It is as comfortable as a Knox Cap.

*In leading stores throughout the country wherever the Knox Coat of Arms is displayed, you are assured of style, quality, and courteous attention.*

# KNOX HATS

FOR MEN  
AND WOMEN

Stephen's had been cashed by her. Not a single check had even been received by her. They were returned to Stephen unopened, with the recurring announcement "not known" in the corner of the envelope.

Helen looked into eyes that were troubled as she gazed into the mirror before her. "It might have been she! She might need money! Should I have called, after all?" Usually Helen could depend upon her first instincts in regard to such matters. Her first instinct had said, "No." By the time Helen's hair was rolled again in its soft knot at the back of her head, her eyes had lost their troubled look. Of what importance was money to a woman who was willing to pay for her child's happiness with the child's love, if it menaced that happiness; and communication, even secret communication, would menace it. It was far safer that she, Helen herself, should remain in doubt as to Stella's hiding place. It was necessary to be so very honest with Laurel.

**B**UT others were not as protective of the shadow. That same evening a few hundred miles away, in a dainty and exquisite drawing-room in Milhampton, Massachusetts, four women in dainty and exquisite gowns stood before an open fire, stirring black coffee with tiny gold spoons in tiny porcelain cups. Their motions were as dainty and exquisite as the room, as their gowns. So, too, were their voices and their accents.

They chatted lightly, inconsequently, touching now one subject, now another, like humming-birds passing from one flower to another, whiling the time away in as amusing a manner as possible, till the men should join them for bridge.

"Oh, yes," sighed Phyllis, "one sees the name of Laurel Dallas in the New York society columns frequently now. The new Mrs. Dallas is doing her best for the child. I call it awfully decent of her."

"Oh, it shouldn't be difficult," said Myra, "with her social position."

"And the child really is rather of a beauty," Mrs. Kay Bird contributed. "That helps. There isn't a suggestion of her mother in her."

"How fortunate! What has become of that dreadful woman, anyhow?" asked Rosamond.

"Oh! Haven't you heard, my dear?" Mrs. Kay Bird raised slim bare shoulders in surprise. "Myra, haven't you told Rosamond you saw the poor thing in New York last time you were down?"

"I haven't seen Rosamond. I returned only night before last."

"Oh, well, tell her. Do. Prepare yourself for a choice bit, Rosamond."

Rosamond placed her empty coffee cup on the mantel and curled up cosily in a corner of the cushioned divan.

"Tell me first, please, about the divorce. You know I was in Europe all last year. I didn't get a bit of the gossip, and there was no account of it in the papers sent me."

"There was no account of it in any of the papers," Mrs. Kay Bird informed her. "Stephen Dallas obtained his divorce without even a flutter of a struggle, which does not surprise any of us who know the facts. We agree with the former Mrs. Dallas, it would have been inexpedient for her to contest her husband's charges."

"Oh, did he make charges?"

## "I'm Making Real Money Now!"

"SEE that coupon? Remember the day you urged me to send it to Scranton? Mary, that was a red letter day for both of us.

"Mr. Carter called me in to-day, and said he had been watching my work ever since he had learned that I was studying with the International Correspondence Schools.

"Then he asked me if I thought I could take over George Stevens' job. I told him I was sure that I could—that I had had that goal in view ever since I began studying with the I. C. S.

"I start to-morrow at an increase of \$60 a month. Think what that means to us—a better home, more comforts, more of everything worth while."

HAVE you ever stopped to think what it is that makes the difference in men's salaries—why one man earns \$35 a week, let us say, and another \$75 or \$175?

It isn't that one man has been endowed with so much more natural ability than the other or has had so much greater opportunities. No—it

isn't that. It is largely a matter of training.

The \$35-a-week man is simply a routine worker. He is doing the same work that a hundred or a thousand other men could do equally well. He has no special qualifications that make him stand out from the crowd.

When "times are slack," as the saying goes, he is always the first to be discharged. It follows that he is likewise the last to be promoted when times are good. There is, to be very frank about it, no special reason why he should receive an increase in salary.

It is different with the man who has trained himself to do some one thing just a little better than the other men in the office or in the shop. He is the man who attracts the attention of his employers. He is the man *they think of first* when they want a man for a position higher up. He is the man who receives the promotions and the increases in salary—*because—he is the man the firm cannot afford to lose!*

You know that these facts are true just as well as we do. The question

for you to decide is whether you are going to be a small-salaried man all your life or whether you are going to move up.

WHAT you have done with your time up to now accounts for what you are *To-day*. What you do with your time from now on will decide what you will be *To-morrow*.

Make that *To-morrow* something to be proud of. You can do it if you really try. Success knows no age—no creed—no class. Nothing is impossible in this broad land of Opportunity. The lives of Lincoln—Ford—Edison—Steinmetz—Vincent—Wanamaker—Wahl, and countless other *men who wouldn't stay down*, are proof of it.

There is hardly a man in a position of wealth, influence and power to-day who did not start from a far humbler niche than yours.

But remember this: You cannot win success by sitting back and just wishing for it. It would hardly be worth while if it came as easily as that.

It takes work—hard work, sometimes—but if you are willing to put your shoulder to the wheel, the International Correspondence Schools will help smooth the path for you and bring you to the final goal far quicker than if you tried to make the journey alone.

One hour a day spent with the I. C. S. in the quiet of your own home will bring you bigger money, more comforts, more pleasures, all that success means.

At least find out *how*—by marking and mailing the coupon that has brought success to so many other men just like yourself. It doesn't cost you a penny or obligate you in any way to do this, yet it may be the means of changing your entire life. Do it—*now!*

### INTERNATIONAL CORRESPONDENCE SCHOOLS Box 7472-C, Scranton, Penna.

Without cost or obligation on my part, please send me a copy of your 48-page booklet "Who Wins and Why" and tell me how I can qualify for the position or in the subject before which I have marked an X:

## The Storm That Rages 625 Days!

Sixteen months of rain! Five months of snow! One hundred and fifty raging thunder storms! Then days and weeks of blistering hot sunshine. If all the rain, the snow and storms scattered through the average five years were rolled into one continuous storm it would last 625 days—*nearly twenty months!*

In every section of the country every building must undergo a never-ending battle with the elements. It may be rain, or snow, or extremes of temperature. Nature's destructive forces are continually at work ready to rot and ruin—unless your buildings are adequately protected with paint and varnish.

Keep your home protected with Acme Quality Paints and Varnishes. With a film no thicker than this thin line  you can save the surface—and when you save the surface, you save all.

For 38 years Acme Quality Paints and Varnishes have been the standard of the industry. They protect property completely. They increase its value. They add to its attractiveness.

Acme Quality Paints and Varnishes are sold by thousands of dealers everywhere. There is one for every surface, indoors and outdoors. If you do not know the Acme Quality dealer in your town, write to us. We will gladly send you his name and our literature.

"That's the usual proceeding, my dear."

"And what were they?"

"Well, he lives in New York. You know the New York laws, I suppose."

Shrugs. Soft laughter.

"And the child," Phyllis added, "was placed immediately in the custody of her father."

"Oh, dear! You never can tell what a woman is at the core, can you?" deplored Rosamond. "Why, when we first knew Stella Dallas she didn't seem really *bad*—though she always was awfully ordinary, of course. Even after that time you saw her at Beaver's Beach, Myra, I couldn't believe she'd really fallen as low as that. I thought you must be mistaken."

"Tell Rosamond about New York, Myra," said Mrs. Kay Bird.

Myra, too, placed her coffee cup on the mantel, and extending a slender hand to a silver box near by, selected a cigarette.

"I saw Stella Dallas in New York, Rosamond," she announced impressively. "I saw her down near Washington Square. I was down there seeing a friend of mine who has the darlinest studio in an old stable. I saw Stella Dallas with the Munn man again. They seemed to be on quite familiar terms."

"Did you really?"

"It was not a pretty sight, I assure you. The Munn man was intoxicated, I think. Anyway, she had to help him walk. I won't say *she* was intoxicated, too, because I don't *know* that she was, but she didn't look *right*, and she has coarsened—oh, terribly, girls! A woman of that sort always does. And has lost her self-respect as to appearances, as is also usual, I believe. Her clothes were really shabby and *his* were in actual rags. City's dregs—that's all I could think of as I looked at them—city's dregs."

"How unpleasant," shuddered Rosamond.

"Disgusting, was my word," said Phyllis.

"Revolted, was mine," laughed Mrs. Kay Bird. Myra extended a languid arm. "Please pass me the matches, Phyllis. Thank you, dear. She's a depraved woman, girls," she announced. "Always was, and always will be. Oh, here come the men!" She flipped her match into the open fire. "Let's cut for partners."

MISS LAUREL DALLAS was to be formally presented to New York society at a tea given at the home of her parents, Mr. and Mrs. Stephen Dallas, on the afternoon of November the twenty-first, from four until seven-thirty o'clock. Several luncheons in her honor were scheduled for the week following the tea; also, several dinners. The names of Miss Dallas's various hostesses were mentioned. So was the fact that Brightswood, her parents' summer home at Green Hill, Long Island, was to be opened over the Thanksgiving holiday, and filled with a house party, including a number of this season's debutantes. One of the most anticipated affairs of the season was the ball to be given for Miss Dallas in early January. So the papers said; so the various society columns repeated and repeated again. "Miss Dallas is one of the most popular debutantes of the season, etc., etc." ("Oh, she'll like that," thought Helen to herself.) "Her picture is printed

COURTESY OF MRS. H. A. B., JR.  
—and then HE bought a Philco.  
What experiences—embarrassing or dangerous—have you had through the failure of ordinary batteries? We would be glad to hear from you.

## Wanted—a Philco!

Cranking a big, stiff-jointed motor is "no business for a lady"—anytime. In emergencies—when battery failure means distress and even peril—safety demands the lavish, steadfast power of a Philco Battery.

And that's why motorists, by thousands and thousands, are replacing their ordinary batteries with Philco Slotted-Retainer Batteries—the highest-powered, longest-lived Philco Batteries ever built for automobile service.

Just a turn of the switch—a touch of the starter—and your motor whirls! No "flunking" where danger threatens. No stalling in traffic. No leaving you stranded, night coming, miles from a service station.

Philco's tremendous reserve power—its rugged, shock-proof strength—its day-in, day-out dependability—are due to Philco exclusive over-size construction plus famous time-tested features that make its two-year guarantee conservative.

Install a Philco NOW. Safeguard yourself and family against hand-cranking experiences. Get the assurance of quick, sure-fire ignition—brilliant lights—a blaring horn. A Philco now costs you no more—in many cases even less—than just an ordinary battery.

Philco Slotted-Retainer Batteries are built for every make and model of car. There's a Philco Service Station near you. Write for address, if necessary.

**Philadelphia Storage Battery Company, Philadelphia**

*The famous Philco Slotted-Retainer Battery is standard for electric passenger cars and trucks, mine locomotives and other battery uses where long-lasting, low-cost service is demanded. Whatever you use batteries for, write Philco.*

**PHILCO**  
SLOTTED-RETAINER  
BATTERIES

*with the famous shock-resisting Diamond-Grid Plates*

### 3-Point Superiority

1. The Famous Diamond-Grid—the diagonally braced frame of a Philco plate. Built like a bridge. Can't buckle—can't warp—can't short-circuit. Double latticed to lock active material (power-producing chemical) on the plates. Longer life. Higher efficiency.
2. The Philco Slotted Rubber Retainer—a slotted sheet of hard rubber. Retains the solids on the plates but gives free passage to the current and electrolyte. Prevents plate disintegration. Prolongs battery life 41 per cent.
3. The Quarter-Sawn Hard-Wood Separator—made only from giant trees 1000 years old; quarter-sawn to produce alternating hard and soft grain. Hard grain for perfect insulation of plates. Soft grain for perfect circulation of acid and current—quick delivery of power. Another big reason why Philco is the battery for your car.

Sheet size 6 1/2" x 9" in.

Ask for booklet

below." ("She'll cut that out," she smiled.)

Helen avoided newspaper notoriety usually. Stephen wondered at her willingness to allow Laurel's name to appear frequently in print, and in conspicuous print. He wondered at another sudden oddity of Helen's. The servants wondered at it, too. In fact, it was one of the servants who brought it to his attention. Twice, lately, upon arriving home in the late afternoon, he had noticed that the shades in the house were not all drawn. He had been able to look into Helen's room on the second floor, and see Laurel seated under the light at the piano, playing. He spoke to the parlor-maid.

"I know, sir. It hardly seems safe, sir. But it's Mrs. Dallas's orders, sir."

Later to Stephen, Helen explained, "But it looks so pretty from the street. Why shut in all our loveliness? I'll run the risk of burglars."

Even on the afternoon of Laurel's tea, Helen ordered the shades raised. She went even further. With her own hands she pulled back the lace curtains in the bay window where she and Laurel were going to stand to receive their guests.

"It only looks out on the alley," she deprecated.

**I**T RAINED on the morning of Laurel's tea. It rained in torrents.

"Gracious! Don't it pour!" exclaimed Stella for the dozenth time to the woman next to her, and for the dozenth time to herself, "Twon't make any difference, though. They've all got limousines." Then out loud again, "Gracious, don't it pour!"

Every few minutes she looked up from the machine which she had been feeding with coarse white cambric all the morning and gazed anxiously out of the streaked window beside her toward the building opposite, against the dark background of which she could see the rain sweeping.

About noon she exclaimed, "Say, it looks lighter! Say, don't it look lighter to you?" Then, "It is letting up. It looks to me as though it was letting up a little," and, finally, "Gosh, it's going to clear off!" And it did!

At five o'clock that afternoon, when Stella, with a hundred or so other women, emerged from the big black building, the air was clear and crisp and cold. Stella, once on the sidewalk, stood still and gazed straight up. Yes! It was all right! The stars were shining like mad, up there, at the top of the canyon, beyond the dizzy precipices.

This was Stella's fifth week in the shirt-waist factory. She must be getting used to it, she guessed. She didn't feel a bit tired to-night. If it wasn't so late, she wouldn't have minded walking the whole way. Laurel would be all dressed now. People would be just beginning to arrive. Gracious, she must hustle. But she'd simply got to go over to the room for a jiffy first. It wouldn't take long. She had locked the door on Ed, but she always got to feeling nervous after a whole day's absence, during the times he was bad.

Stella was pretty sure that this landlady guessed what was the matter with Ed, but she could never feel certain how many of the roomers were "on." There are roomers who find it helps to pass away the time to make a fuss over a thing in the house, like Ed. Stella didn't want to have

## The Promise of Happy Days

**S**OME day in June, when happy hours abound, a wonderful girl and a wonderful boy will leave their friends in a shower of rice—and start to roam.

Then life will surely slip its tether and youth will be full of the promise of happy days to come.

Give them a Jordan Blue Boy, the bright sky overhead, the green turf flying by—and just beyond the hill a thousand miles of open road—then a quiet inn for dinner.

This rare car of personality and charm is a great companion of our freer hours.

It carries a thrill, even through the busy traffic down the avenue. It leaps light-footed to the throttle in the park.

It is balanced, as a fine piece of mechanism should be—economical as your good judgment requires—powerful beyond the need of hill or speedway.

There is a pride of ownership in the Jordan that reveals a love for things that really count. It's like old money—old treasures—good taste without display, and judgment that is rare.

Jordan cars are chosen by those who, being imitated much, must ever display cautious judgment.

# JORDAN

JORDAN MOTOR CAR COMPANY, Inc. Cleveland, Ohio

Many a family knows from painful experience how true is the old song:

"They pushed the damper in and they pulled the damper out but the smoke went up the chimney just the same."

From a drawing by CAIDA HICK  
© ARCO 1923

## No longer true!

THE PROGRESS of heating science up to the time when the American Radiator Company was formed is pretty well summarized by this old song reprinted above.

Homes were either too hot or too cold; and no matter what you did to the damper the smoke went up the chimney, carrying most of the heat along.

One of the first steps taken by the American Radiator Company was the establishment of a department for determining definite performance standards for its boilers and radiators. That department developed into the Institute of Thermal Research, the largest laboratories in the world devoted exclusively to problems of better warmth.

Here materials are tested and every

new type of boiler and radiator must prove in advance precisely what it can do.

Architects have long been familiar with the service of the Institute of Thermal Research. It is one large reason why they so often write "AMERICAN Radiators" and "IDEAL Boilers" into their specifications. Dealing as they do with life's most sacred investment, they like to insist upon materials from which scientific tests have eliminated every element of chance.

The little book, "Better Warmth and Better Health," published by this company, contains ten definite suggestions for saving coal, and other information of value to every home owner.

May we send you a copy? A card to either address below will bring it to you at once.

Institute of Thermal Research

to move again. This landlady had been awfully decent about the rent since she had got a job. Gracious, but it hadn't taken that thousand dollars long to fade away! It cost something to keep yourself and a sick man—who has to have a "particular kind of medicine"—going these days, though you didn't buy yourself a single rag, nor spend a cent on theatres, or the movies, or desserts—

Everything was all right at the room, thank heaven! Stella stopped only long enough to light the candle placed upon the chair by the door, hold it aloft a moment and gaze down upon the double bed. Ed was still there, still harmless, breathing heavily, inert and unconscious.

There wasn't much furniture in the room besides the bed—a commode, a table, and three chairs. One of the chairs was an old morris chair. It was worth all the rest of the furniture put together to Stella. It was Stella's bed. Surprising how well you can sleep on an old morris chair if you work hard daytimes, or even on the floor if you get cramped. It's all in the matter of getting used to it.

The candle spit and sputtered, as if it objected to the scene it lighted. Stella didn't blame it. It wasn't especially beautiful. Stella would be busy in the room till midnight, when she got back. She did like a neat room to sleep in. It looked like somebody's back yard just at present, with all Ed's clothes and a few of her own hanging up to dry on a cord she'd stretched back and forth from wall to wall, and Ed's unwashed breakfast dishes on the floor beside the bed. He'd roused enough to take the nourishment she'd left for him, apparently.

She blew the candle out, put it back upon the chair, closed the door and locked it, descended four flights of bare stairway and went out again beneath the stars.

STELLA could have spoken to Laurel if the window had been open. She was as near to her as that! She could see her as clearly as if she had been inside. How lucky the curtains had been forgotten again. How lucky this particular window had been selected to stand in to meet the guests. Lord, but Laurel's flowers were lovely! The papers hadn't exaggerated any, Stella guessed. Laurel, standing in the midst of her garden, was like a great big flower herself.

Stella had never seen her look more beautiful. Her dress was white, chiffon she thought—made over something silvery that made her shine as if there were dew all over her. No dress Stella had ever provided for Laurel could *touch* this. One of those artists, whose address only the few and fortunate possess, had made this fairy dress for Laurel, Stella guessed. My, how she became it! Gosh! She looked like a regular queen to-night! She carried a sheaf of white orchids on her left arm. Through the chiffon ribbon that tied the flowers, Stella caught a glimpse of something that looked like diamonds sparkling on Laurel's wrist! A moment later, as Laurel turned a little, she caught a glimpse of what was clasped about her throat. Pearls! A string of pearls! Oh, Lollie! Oh, dear, dear Lollie! She had come into her own! She was being crowned in her rightful kingdom at last!

Stella left the window for a moment and stole to the front of the house. Yes,

## Half a century of confidence means something!

THE nice thing about Listerine is that it does what an antiseptic is supposed to do—guards against infection—and does it *safely*.

For half a century now people have trusted this very excellent and dependable product.

And the longer you have it around the house the more uses you discover for it. Just glance through the following list of some of the purposes it serves:

### Some of its many uses

A safe, unirritating antiseptic for cuts, wounds and scratches, affording protection against infection while Nature heals.

As a gargle for throat irritations to ward off more serious ills.

As a spray in nasal catarrh.

A safe and fragrant deodorant in matters of personal hygiene. Delightful after shaving.

Effective in combating dandruff. Useful in many skin disorders.

As a mouth-wash to correct unpleasant breath (halitosis).

Always have Listerine near at hand in your home. Then you will have the comfortable feeling of knowing the antiseptic you use is sure in its work—and *safe*!

LAMBERT PHARMACEUTICAL COMPANY  
SAINT LOUIS, U. S. A.

# The physician found that the glands of her mouth had dried up—

**A remarkable case showing the influence six tiny glands have in protecting the unreplaceable enamel of the teeth**

**A**n interesting case has been reported by a leading physician.

A woman entered a hospital complaining of dryness in her throat and of difficulty in swallowing. Her teeth which had always been sound had suddenly begun to decay "in a frightful manner."

A thorough examination by the physician showed that the six small *salivary glands* in her mouth had ceased to pour out their constant stream of healing, germ-free fluids.

We have here, the physician says, the explanation for the rapid progress of tooth decay in this patient. The acids produced by fermentation of small food particles (which are present even after a thorough brushing of the teeth) were not diluted by the saliva. They acted with full strength on the enamel of her teeth, rapidly eating it away.

To provide protection against these deadly acids which are constantly forming in every mouth, nature intended the six tiny salivary glands situated in the cheeks and under the tongue automatically to flush the teeth and gums every moment in the day and night.

Although these glands are small they can win their fight against the acids if they can be made to function normally. In a healthy mouth they secrete more than a quart of *alkaline* fluid per day.

This fluid neutralizes the acids and washes them away.

**Why in so many apparently healthy mouths secretions are often insufficient**

The way we live today makes it difficult for our glands to work at their normal rate. Nature expected us to stimulate and exercise them by chewing hard, tough food.

*Examination showed that the acids were acting with full strength on the enamel of her teeth, rapidly eating it away*

*Diagram showing the position of mouth glands. 1—the parotid; 2—the submandibular; 3—the sublingual. Identical glands are located on the right side of the face.*

A new instrument for the study of the glands of the mouth shows that they are 20 times more active when we chew than when the jaws are at rest. This is why only 2 out of every 100 savages had bad teeth—the rough, raw food they ate kept the glands well exercised, healthy and active. The soft foods we eat today, often hurriedly swallowed, do not keep our glands exercised and active.

***Pebeco keeps the glands of your mouth at work***

Pebeco is a dentifrice prepared especially to assist the natural processes causing these glands to work. It does for us what the chewing of hard food did for our primitive ancestors. Pebeco is neither acid nor alkaline. By its mere presence in the mouth it causes the glands to flow for a long period of time. It never exhausts the glands—it never checks their natural action.

For washing the teeth and keeping the outside surfaces polished no better dentifrice than Pebeco can be made. It works quickly and efficiently without wearing away the enamel or injuring the edges of the gums. Its constant use gives you teeth as

beautiful as nature intended you to have. After a thorough cleansing with Pebeco—it has just enough tang to it to exhilarate—your mouth feels as refreshed as does your body after a bath, and you have the convincing feeling, too, that you have done for your teeth and mouth all that science can teach you to do.

Take home a tube tonight and note its invigorating and refreshing taste. It will keep the glands of your mouth active and your teeth sound and beautiful. 50c at all druggists. Manufactured only by Lehn & Fink, Inc.

***This simple gland test will show you***

Send us ten cents today for material for testing whether your own salivary glands are active enough to protect you against these deadly acids. We will include a junior size tube of Pebeco and our booklet—"How the Glands Protect the Teeth." Lehn & Fink, Inc., Dept. E-5, 635 Greenwich St., New York.

There was an awning running from the front door to the street, there was a man in livery at the curbing, shouting numbers; there was a long row of automobiles on both sides of the street, reaching far away in both directions. All for Lollie. Stella glanced up. Every window was faintly aglow. Through one of them that must have been open she could hear music, dance music—piano, violins, saxophone, and drum. All for Lollie! She went back again to her window in the alley.

Everything was as it ought to be. Even Lollie's mother was as she ought to be—also wearing a gown made by an artist, also wearing pearls, also beautiful, also queenly. My! She was made for the part. As the guests approached her, Stella observed that there was that look of high approval and homage in their eyes that should be in the eyes of everybody who shook hands with Laurel's mother. Stella observed, too, that when the guests shook hands with Laurel, with the little queen herself, there was more than high approval in their eyes. There was sudden and spontaneous pleasure, and afterward murmured words of praise.

FOR more than an hour Stella stood in the shadow of an electric pole, and feasted and feasted. A policeman finally discovered her and told her to move along.

"All right," she replied, cheerfully. "I will. I'm ready now. I've seen enough." For the instant before she had seen straight into Laurel's heart for a fleeting ten seconds!

Laurel didn't know it. Laurel had no idea that her mother's eyes were in the depths of the mirror she had gazed into, at her own reflection.

It had happened like this: Stella had seen it all. She had observed the first faint flush of color creep down the back of Laurel's neck as a young man had rushed up to her, and eagerly taken her hand in his in greeting. Apparently, the young man had asked Laurel to dance with him. As yet she hadn't left her post in the bay window. She had hesitated, had glanced around the room—the guests were beginning to thin out—then had accepted the invitation.

Still flushed (her neck was still pink beneath her pearls), she had looked about her for a place to lay her flowers, spied the window sill, had taken three steps toward Stella and laid her flowers down, almost as if in Stella's lap; paused, raised her eyes. The window was just in front of her. The clear plate glass, with the light behind it, was a perfect mirror. Laurel gave herself a long look. Six feet away Stella caught that look, hugged it to her close. She had never seen anything so dazzling, so luminous, in all her life before! It wasn't meant for her. It wasn't meant for anyone on earth. It was like catching a bit of shooting star—of shooting heaven.

The young man to whom Laurel gave her hand a moment later, the young god who had made Laurel look at herself like that, was none other than Richard Grosvenor. Stella would have known him anywhere.

"That's all right then, too," she murmured.

"Didn't I tell you to get along there?"

"Yes, sir. I'm going. I was only seeing how pretty the young lady was."

(The End)

## Who picks the food she needs?

**YOU** can let the child pick the flowers, but the food-needs of a growing child are so vital that Mother herself must select her daughter's food.

Mothers should know that while oatmeal leads all cereals in food value, there's a *difference* in rolled oats.

*The superiority of H-O is due to an exclusive process of Steam-Cooking and Pan-Toasting the oats in the old-fashioned way.*

Thorough Steam-Cooking in closed kettles at 250 degrees, dextrinizes the starch and makes the oats digestible. Pan-Toasting over live coal fires at 650 degrees, produces that delicious H-O flavor.

H-O oats are plump, curly and brown—exclusive characteristics made possible only by the Steam-Cooking and Pan-Toasting process.

Oatmeal made from H-O (Hornby's Oats) has distinctive color, flavor and texture, unlike any other oats.

For free trial package, write the H-O Cereal Company, Inc., Department "C," Buffalo, N. Y., or Ayr, Ontario.

## Four Out of Five Wait Too Long

*Make sure your teeth  
are sound*

Tender, bleeding gums herald Pyorrhea's coming.

Don't delay. Start the fight at once. First of all, go to your dentist for tooth and gum inspection. Then, brush the teeth, twice daily, with Forhan's For the Gums.

Public dental records show that four persons out of every five past forty, and thousands younger, wait too long. Don't be one of this sorry, neglectful majority.

Pyorrhea, when it strikes, is a merciless foe. The gums recede. The teeth loosen or must be extracted. Germs gather and infection often sweeps through the system.

Forhan's For the Gums, when used in time and used consistently, will prevent Pyorrhea or check its progress. It will keep the teeth clean, the gums firm, the entire mouth healthy. It is the time-tested formula of R. J. Forhan, D. D. S., pleasing to the taste and recommended by the foremost dentists.

Buy a tube today. Brush your teeth regularly with it, morning and night. At all druggists, 35c and 60c.

## Mary Pickford Describes Her Most Thrilling Experience

(Continued from page 34)

little money. And at thirteen she went to New York all alone, determined to get this chance.

"I lived with a woman in a little flat so crowded that we were always falling over each other," she said. "But the woman herself was poor, and it was good of her to take me in at all. I used to call her 'Aunt Minnie,' although she wasn't related to me in any way. For weeks I haunted the agencies and the manager's offices, sitting there for hours at a time, with the other people who were hunting a job as I was.

"We would wait and wait, until finally somebody would shoo us all out, telling us we could 'come again next Monday.' I was always either going out, to try my luck at another office, or being turned out along with the rest of the weary, waiting crowd. It doesn't seem to me I ever saw anybody except office boys, who apparently despised us all, without exception.

"It was summer and terribly hot. I used to think I would melt; and the little money I had was melting away! I wouldn't spend a nickel for car fare, but walked the hot pavements until my feet were almost blistered.

"THEN I had what I thought was a wonderful idea. I would write letters to the leading actresses, tell them that I, too, was going to be a great actress, and ask them to help me. I began to write: to Maude Adams, to Julia Marlowe, to Mrs. Fiske. But suddenly, I had a still more wonderful idea: I would go to see these stars and present my case in person.

"The only leading actress who was accessible just then was Blanche Bates. This seemed a great piece of luck, however, for I knew she was under Belasco's management, which was the very height of my own ambition. Over and over again I had tried to see him; but as usual I never got past the office boy.

"I determined now to ask Miss Bates to help me. It meant spending money for car fare, for she was playing in Brooklyn, but I would have to be extravagant for once. I had only one dress—but I put it on ten different ways!" laughed Mary.

"Miss Bates has told me her side of the story since then. It was a terribly hot day, but I finally reached her hotel and was admitted to her apartment by a colored maid, named Carrie. I have good reason to remember her, for she helped to bring about the most wonderful day of my life.

"Carrie and I had quite an interview. She was such a contrast to the office boys I had been dealing with that I quite opened my heart to her. And if other people had been as responsive as Carrie was my troubles would have been over long before they did come to an end. It seems that she went in to Miss Bates and asked her to see me. But it was so hot, and Miss Bates was tired, and she thought I was just another of the stage-struck little girls who were always bothering her;

# "It's the Plug Hat Gets the Snowballs"

**T**HE first portable electric suction sweeper on the market was The Hoover.

It is the first today.

Year in and year out it has renewed and reinforced its leadership by the unremitting thoroughness of its work.

Only a product of unique and special virtue can do that.

It is always the outstanding thing that is the tempting target; and like the leader in every field The Hoover is the focus of competitive attack.

So far as we can learn, this attack assumes only one character.

It does not deny the efficacy of Hoover design, Hoover construction, or Hoover performance.

But it seeks to spread the impression that The Hoover is hard on rugs.

Do you think The Hoover is hard on rugs?

*If it were, would it be the largest selling electric cleaner in the world, with more than a million satisfied users?*

*If it were, would it be the choice of rug experts as the preserver of carpetings beyond price?*

No, dear reader, The Hoover is not hard on rugs.

It is only hard on competitors.

so she refused. Carrie urged my cause, but she couldn't make any impression. Finally she said to Miss Bates:

"I never have asked you a favor, but I'm going to ask one now. Won't you *please* tell this little girl that she can go to Mr. Belasco and say that you sent her?"

"Oh, all right!" said Miss Bates. "Tell her that, if you want to."

"When I got this message, I went as fast as I could straight to the theatre where Mr. Belasco's offices were. They were up three long flights of stairs. I had often climbed those stairs; and always, before this time, they had seemed interminable. But now I fairly ran up and, breathless but triumphant, confronted my old enemy, the office boy, and announced haughtily:

"I want to see Mr. Belasco! I have a message from Miss Bates!"

"This didn't have the expected effect on the office boy. Nothing does affect them. If Shakespeare himself came along and asked to see a manager, the office boy would say, 'Whaddayou wantta see him about?'"

"But it happened that Mr. Dean was in his office close by and heard my imperious demand. He had me shown in, and wanted to know what I meant about having a message from Miss Bates. At first I wouldn't explain. I wasn't going to be put off by anybody! I demanded to see Mr. Belasco. You see, I was absolutely desperate by this time, and I had the courage that comes with desperation."

**E**VEN in the telling of the story, there was in Mary's eyes such a glowing depth, such intensity, such fire, that I wondered how anyone could have resisted her. Evidently Mr. Dean came under the spell, just as Carrie had. For he finally promised that he would try to get her the interview she wanted.

"I had to wait a long time though," she said. "Weeks went by. I climbed those three flights of stairs so many times that I seemed to be always either going up them, hoping—or coming down, with one more disappointment added to my long list. Then, at last, they told me one day that Mr. Belasco had agreed to see me at the theatre that night, after the play was over."

"Aunt Minnie went with me; and at eleven o'clock I met Mr. Belasco on the stage. The actors had gone to their dressing-rooms and the place was empty and almost dark. I was frightened, more frightened than I have ever been, before or since. The chance I had longed for, and worked for, and prayed for had come. I didn't *dare* to fail. But it would be over so soon! Just a few minutes; and then—

"As I walked toward Mr. Belasco, he looked at me—and his eyes seemed to pierce clear through me. I didn't speak; *couldn't* speak! After he had studied me a moment, he said, 'Well, young lady! So you want to be an actress?'"

"Oh, no, sir!" I said earnestly. "I've been an actress for eight years!"

"I was thirteen then, but I was small and looked only about ten or eleven. So when I said I had been an actress for eight years, it amused Mr. Belasco."

"I want to be a *real* actress now," I went on. "I've been doing dreadful parts in dreadful plays. I've wasted eight years, and I mustn't lose any more time!"

*Hamilton No. 920 in  
"Byron" Case \$172*

In its case of fashionable green or white gold (14k engraved), this watch is a thing of beauty. 17-jewel, five-position adjusted movement. Attractive dial with raised gold numerals.

## *A reputation for accuracy*

WHEN you want to know the correct time, consult a watch that has a reputation for accuracy. The Hamilton's reputation for accuracy is so great that it has become known as the Railroad Timekeeper of America.

To the virtue of accuracy, the Hamilton Watch adds that other requisite of a modern timepiece—beauty. The Hamilton is a beautiful object that men and women take pride in owning. Men like the Hamilton Watch because it keeps accurate time. Women also like it because it is dependable as well as dainty.

Jewelers take pleasure in selling the Hamilton Watch because of its accuracy and durability.

It is now possible to get Hamilton accuracy, dependability, and service at a very reasonable cost. Our Number 974, movement only priced at \$25.00, can be fitted by your jeweler in a case to suit your pocketbook.

"He smiled at that and said, 'But why do you come to me?'"

"I knew enough about human nature even then," said Mary, smiling herself, "to understand that everyone loves appreciation. 'But I was sincere; I wasn't just trying to flatter him when I told him that I had made up my mind to begin at the top and then—if I must—go on down."

"You are the top," I declared. "So I have come to you first. If you refuse me, I shall go to Mr. —;" and I named another manager.

"That made him smile again. 'Well,' he said, 'we will give you a trial, anyway.' And he handed me some poems and asked me to read them to him."

"Oh, no, sir!" I said. "Please! I don't know these poems. If I try to read them to you, I can't do myself justice. I'm going to do a scene from one of the plays I've been in. You won't like it. I know it's awful. It's what I want to get away from. But it's the only kind of thing I really know."

"All right!" he laughed. "Have it your own way." And he called to the electrician, who was waiting for us to get through, "Louie, turn on the lights for the young lady."

"He climbed over the rail of the stage box and settled himself, while I dragged two chairs to the center of the stage and explained to him that one chair was a poor woman and the other was a policeman who was going to take her to prison. I was a little boy, pleading with the policeman to spare the unhappy female."

"The lights blazed on; and I fell on my knees between the two chairs. I was supposed to be pleading for the poor woman; but my torrent of passionate appeal was really for myself—for the chance which I had to have! If ever I put my whole heart and soul into anything, I did it then. I was terrified lest he might stop me and say, 'That's enough. It's awful!' And I poured out the lines in a mad rush of feeling—in a perfect agony of determination that I *would* be heard."

"When I had finished, there was absolute silence for what seemed to me a long time; but I suppose it was only a minute or two. Then Mr. Belasco said, 'Put out the lights, Louie!'"

**S**HE stopped and looked at me with a little smile—but it was a rather tremulous smile. She was not acting. She was living the whole thing over again—body tense, hands clenched, eyes glowing. She made me see and feel it too; the frightened little girl, face to face with her fleeting chance, passionately determined to be heard, tremblingly awaiting the verdict—and then the silence broken by that abrupt order: "Put out the lights, Louie!" The words actually gave me a cold thrill, a little shiver along my spine.

"It was as if he had said to me: 'Put out the lights!'" she went on. "The lights of your dreams and your hopes—put them all out!"

"The stage suddenly went black, except for one solitary light at the side. And I stood there in the shadows, my hands like ice, my heart like lead, watching Mr. Belasco as he climbed onto the stage and walked toward me. He led me over to where the light shone down on us and again looked into my eyes for a long minute. Then he took my face between his

hands and said, 'I think we *will* make a "real" actress of you, little girl.'

"Can you imagine how— No! you *can't* imagine my reaction of feeling! It was like coming suddenly to life, after being almost dead."

"Aunt Minnie and I went up to his office and I signed a two-year contract that very night. When he asked me my name, I said; 'It's Gladys Melbourne in New York—but I'm Gladys Smith in Toronto!'"

"That amused him too. I had picked out Melbourne for a stage name because it seemed very high-sounding to me. He agreed that Smith would be a handicap for an actress, but he didn't approve of Melbourne; and it was Mr. Belasco himself who chose the name I have kept ever since. I had been christened Mary Gladys Smith. I always hated the 'Gladys' part and was only too glad to drop it for 'Mary.' He asked me about family names; and I recalled that my mother's grandmother was a Pickford. So I began the most wonderful day of my life as Gladys Melbourne and ended it as Mary Pickford. It was almost like being born again."

**I** WAS with Mr. Belasco two seasons then. The first part I took was that of a little Southern girl, a half-starved child, who should have been only skin and bones; whereas I, in spite of my own poverty, was decidedly plump. I was very modest, and it embarrassed me terribly when the problem of hiding my legs was discussed quite openly. It was settled by having me wear pantalettes. But that embarrassed me even more! At the dress rehearsal, I tried to tuck up the offending garments; and I'll never forget my humiliation when, as I reluctantly came forward, Mr. Belasco called me over and pulled down those pantalettes."

"The two years with him were invaluable to me. I did not have big parts, or earn much money, but when we got back to New York at the close of the second season, I had saved two hundred and fifty-five dollars. Most of it went for clothes which I needed, and to help my mother. It was summer then, and the regular theatres were closed. So I turned to the moving pictures. It seemed a dreadful come-down for anyone who meant, as I did, to become a great actress on the real stage. But I had to live! So I got a job with the old Biograph Company—and that settled my future, although I didn't know it then."

"Tell me some of the thrills you have had since you became a moving picture star," I said. "You must have had a good many."

"Yes, I suppose so," she agreed. "I remember one narrow escape when we were making a picture called 'In the Sultan's Garden.' They put me into a sack and threw me from a boat into the Hudson River. They had tried to take every precaution, especially as I couldn't swim. The sack was not really tied. I could open the top easily. And they had put sandbags in the bottom of it, so that it would sink and leave me free."

"In the play I was to be rescued by an American naval officer, who was to reach the scene in a ship's cutter. They had hired a New York police cutter for the occasion and had put an expert swimmer on it to do the rescuing. They had several

*What a mother can do to keep her child's hair healthy—fine, soft and silky—bright, fresh-looking and luxuriant*

**T**HE beauty of your child's hair depends upon you, upon the care you give it.

Shampooing it properly is the most important thing.

It is the shampooing which brings out all the real life and lustre, the natural wave and color, and makes the hair soft, fresh and luxuriant.

While children's hair must have frequent and regular washing to keep it beautiful, their fine, young hair and tender scalps cannot stand the harsh effect of ordinary soaps. The free alkali in ordinary soaps soon dries the scalp, makes the hair brittle and ruins it.

That is why discriminating mothers, everywhere, now use Mulsified coconut oil shampoo. This clear, pure, and entirely greaseless product cannot possibly injure, and it does not dry the scalp or make the hair brittle, no matter how often you use it.

### When oily, dry or dull

If your child's hair is too oily, or too dry; if it is dull and heavy, lifeless, stiff and gummy;

if the strands cling together, and it feels harsh and disagreeable to the touch; or if dandruff is accumulating, it is all due to improper shampooing.

You will be delighted to see how easy it is to keep your child's hair looking beautiful, when you use Mulsified coconut oil shampoo.

### The quick, easy way

Two or three teaspoonfuls of Mulsified in a cup or glass with a little warm water is sufficient to cleanse the hair and scalp thoroughly.

Simply pour the Mulsified evenly over the hair and rub it in. It makes an abundance of rich, creamy lather, which rinses out quickly and easily, removing every particle of dust, dirt, dandruff and excess oil—the chief causes of all hair troubles.

After a Mulsified shampoo you will find the hair will dry quickly and evenly and have the appearance of being much thicker and heavier than it really is. It keeps the scalp soft and healthy, the hair fine and silky, bright, fresh-looking and fluffy, wavy and easy to manage.

You can get Mulsified at any drug store or toilet goods counter, anywhere in the world. A 4-ounce bottle should last for months.

*Splendid for Children—  
Fine for Men*

other expert swimmers at hand in case of an emergency. So they thought—and I hoped—that everything would be all right.

"They threw me overboard and I came up, free from the sack. But the man who was running the cutter was not a moving picture actor, and he was so excited that he lost control of the boat and headed it straight at me. I should have been crushed between the two boats if it hadn't been for one of the swimmers I just spoke of. He leaped into the water, caught me and pulled me down, just as the bow of the cutter passed over my head and crashed into the other boat.

"I had another narrow escape when we were making the screen version of 'Pollyanna.' I got off a train in one of our moving-picture storms. They are made, you know, by sending up sheets of water from great hose, and then directing the blast of airplane propellers against the water as it comes down.

"They wanted it to look like a particularly driving storm; so they had got an extra propeller or two. You've no idea what a force those blasts of air have! I was absolutely powerless against it—and it was carrying me toward the train, which by that time was in motion. I fought it with every ounce of strength I had, but I simply couldn't stop! I was getting nearer the train all the time; and I knew that the men operating the propellers didn't dream that I couldn't help myself. They thought I was just acting. In another second, I should have gone under the wheels, if it hadn't been that I was actually blown off my feet and fell flat. I believe that was the narrowest escape I've ever had.

"**W**HEN we were making a picture called 'The Hoodlum' I risked my life, I suppose, but it was in another way. That was the year of the influenza epidemic. I had been ill with the 'flu' myself for four weeks. The picture had been held up all that time and I felt that I must begin working again as soon as possible. The doctor told me I was crazy, and that he wouldn't be responsible for the consequences. But I don't think any outsider realizes the sense of obligation which motion picture stars feel in regard to their work. If the star is laid up, the whole picture stops. Dozens, perhaps hundreds, of people have to be idle. So you take your life in your hands, if necessary, to let the picture go on.

"We were making scenes in which I had to be out in another of those driving rainstorms. Every night, for eight consecutive nights, I was drenched to the skin, from eight o'clock in the evening until midnight.

"The 'rain,' driven by propellers, cuts your face with the force of needles. Even through my clothes, I could feel the sting of it. Between times—for we would do the same thing over and over, to be sure of getting it right—I would be wrapped in blankets, and would sit there in my wet clothing until it was time to go on again. I never sat down to my 'dinner' until two o'clock in the morning. But I lived through it. And after all," she added, shaking her head, "it wasn't a very good picture anyway."

After that we got to talking again of the days when she was poor and struggling.

## "The School of Hard Knocks" vs. Organized Training

WHAT was "good enough for your father" doesn't *have* to be "good enough for you"—not in this, the Twentieth Century.

Most men try to advance in business thru daily attendance at an institution we all know—"The School of Hard Knocks."

It's too *slow*—too *uncertain*—question-marks stud every step of the way.

Then, too, as the years roll by—slowly at first, then faster and faster—the gray creeps up around our temples.

Within the last two decades there has been made available a direct, undeviating road to success in certain highly specialized and lucrative branches of business.

Let's start at the beginning—  
—picture your present measure of success by the small letter "s."

—and let the *capital* letter "S" symbolize the larger Success you want to attain.

Your problem, in a few words, is to get from the small "s" to the big "S" with as little lost motion and time waste as possible.

There are two routes. Compare them.

One way is uncertain—slow—devious and wandering—often obstructed, and difficult at every turn.

This is the way unthinking men take. It's the way you'll take if you *prefer* to do the laborious pioneering yourself—to toil unaided thru the forests of perplexity; and—if your span of life is *long* enough—eventually you may arrive.

But the road of routine experience is mighty hard and mighty slow.

The other path is the straight line—the shortest distance between two points—the route of *organized training*.

Following this route, your road is wide and clear and plain ahead. Pathfinders—generations of practical business men who have won recognition as outstanding authorities in their special fields—have gone ahead of you. And the result of their work and research and toil gives to you the priceless heritage of their experience—organized training which makes the short, sure route from the little "s" to the larger "S" of real Success a certainty.

Your progress is *sure*, for you follow the identical path which has carried hundreds of thousands of other men to the goal of their dreams.

"The greatest men in the country secured their education thru the basic correspondence school principle—home study. Many of them have done this without the direction of effort and supervision which correspondence schools give. This being true, certainly it is possible for the average student to do as much under a staff of skilled instructors.

"The faculties of correspondence schools of national standing compare favorably with those of the universities. Their influence penetrates to the remote quarters of the country. That means the open door to the *best* instruction for everybody."

The two paragraphs above are the words of one of this country's most respected educators, Dr. Russell H. Conwell, university president, who is known internationally thru his famous lecture, "Acres of Diamonds."

It is well worth while to go back and read them again.

All fair-minded men rebel instinctively against injustice. The greatest injustice of all is that which a man works upon himself and his family when he fails to take advantage of a tried and proven method whereby he may enhance the cash return from his working hours by increasing his value to employer and self.

And the man who has been staking his future—all his hopes and dreams—on "The School of Hard Knocks" can do no wiser thing than to investigate the shorter route—the straight line road of organized training as exemplified in the courses of this institution.

# LA SALLE EXTENSION UNIVERSITY

*The Largest Business Training Institution in the World*

**A** FRESH summer morning, bright with sunshine, gay with colorful garden blossoms. A cool and charming living room. The morning paper; the early mail. And the wide, soft spaciousness of the Kroehler davenport.

What an inviting hour of rest and relaxation, in the delightful atmosphere of a dignified, well-ordered room—the grateful luxuriousness of a deep-cushioned davenport!

Who could guess that they both serve a double purpose—that the room became at night a spacious, airy sleeping place; the davenport a wide, roomy, comfortable bed!

Daytime gives no evidence of the Kroehler davenport's nighttime use. A few minutes' smoothing and tucking in of the covers, a quick, deft motion, and all evidence of a bed, with its easy springs and sleep-welcoming mattress, vanishes; folded secretly away beneath the soft cushioning of the davenport seat.

Lending distinction all day long to

the most correctly appointed room; returning at night to its role of bed. Taking the place of an added room; subtracting from the family budget the rental of that room.

Is it any wonder that the Kroehler davenport bed is rapidly supplanting ordinary davenports in every home that has even *occasional* need for extra sleeping space? Its over-stuffed, colonial and period designs, in any wood finish, with chairs to match, meet any decorative plan. Charming patterns in mohair plush, tapestry and velour, as well as leather or leather substitute, give color schemes a wide range. Prices—whatever you have planned to pay.

Leading furniture dealers everywhere sell Kroehler davenport beds for cash or on easy payments. Ask

for a demonstration. Look on the back for the Kroehler name plate shown here. Do not accept a substitute. Illustrated booklet and the name of the nearest dealer on request.

# KROEHLER

## *Davenport Bed*

And, thinking of the contrast between then and now, I said to her, "How does it feel to have a million dollars to spend?"

"But I never do have it to spend!" she protested. "Of course, all of the house expenses are borne by Douglas, while I take care of Mother's home. But we share the studio expenses, which are very heavy. Then, too, I have a good many other responsibilities. I told you that I am a serious person—and I take my responsibilities as seriously now as I did when I was that funny little girl who thought she was the head of her whole family."

"But as for myself, I don't care for great wealth, nor for a show of it. Why," she laughed, "when I came to New York last winter I intended to buy myself a chinchilla coat. I thought I wanted it very much! But I went home without it. I decided that I didn't need it, and that it would be foolish for me to spend all that money for something I could easily get along without."

"Anyway—" she hesitated, then went on very earnestly—"you won't think I'm posing when I say that I don't really like to wear loads of furs and cover my head with beautiful dead birds. It is true that I have a squirrel coat. But sometimes I find myself looking at it and imagining that I brought up all those little creatures and loved them. I'm afraid it sounds foolish for me to say that I don't feel quite happy about things like that; but it's true. I want to be reasonable. Perhaps I need a fur coat for warmth sometimes. Well, I've got one. But I don't need to buy fur coats galore just because I have the money. I'm not a vegetarian, either. But I don't eat much meat; and I eat less and less meat as I grow older."

"AS FOR spending money, there are beautiful ways of doing it; and I try to find some of them. I don't want great wealth for myself. But I'll admit that I want comfort. And comfort to me means quality, not quantity. I could be happy in a log cabin—if it was bright and cheerful and clean. I hate disorder."

She made a gesture which took in the room, where the maid had been interrupted in the midst of packing.

"I don't want a lot of elaborate food. But what I do have I want to be nicely served. I remember that when I was a child we had some dishes that had violets painted on them. I hated to eat off those dishes, because it struck me as ridiculous to be having food served on violets! I love flowers. I love them too much," she laughed, "to eat bacon and eggs off them."

"Poverty is not beautiful," she went on thoughtfully. "But there is a wonderful thing about it: If you are poor, you want so many things; and you want them with your whole heart and soul! When you want things that way you work for them, struggle for them, fight for them. I don't believe anyone ever gets what is really worth while without struggling for it. And poverty gives you the incentive to make the effort."

"You've told me the most thrilling experience you've had," I said. "How about the most amusing one?"

"Well—I don't know," She thought it over for a moment. "Probably the things that happened to me when I was so desperately poor would seem funny to other people. But they seem tragic to

# Old English Wax

**FREE!**

A can of Old English Wax will be given free, for a short time, with every *Old English Waxer-Polisher*. The *Waxer-Polisher* is a new labor-saving device that does two things—it waxes, then polishes the floor. A great improvement over any weighted brush, which does not apply the wax but merely polishes. Lasts a lifetime. If your dealer can't supply you, mail the coupon below.

*Now is the time  
to get at your floors*

Give them the rich, lustrous finish you have so often admired in other homes. You can do it quickly and easily.

Old English Wax brings out the hidden charm of the wood in a mellow, velvety lustre. Such a finish is hard, lasting, and proof against scratches and heel-marks. Once waxed, the floors will retain their beauty for a lifetime with only an occasional "touching up" of the places most used.

## Wax floors the new, easy way

Just as easily as you push a carpet-sweeper, so can you use the *Old English Waxer-Polisher*. It does two things—waxes, then polishes the floor. Of course, a soft cloth will always be a satisfactory way to apply wax and polish the floor. But the *Waxer-Polisher* is quicker, easier, and uses less wax.

## The cost is small

Old English waxed floors look expensive—but are not. Old English Wax is made with a large proportion of hard, high-grade, imported wax, so it goes farther, lasts longer, and therefore costs about one-third of other finishes.

THE A. S. ROYLE COMPANY, 1623 Dana Ave., Cincinnati, O.  
Canadian Factory: Toronto  
Manufacturers of wax finishes exclusively for over 25 years

me. Douglas says I have a 'Canadian sense of humor,' which I don't think is intended to be complimentary," she said with a laugh. "I'll tell you! Let's ask him!"

Opening the door into the next room, she said, "Has anything funny ever happened to me, Douglas?"

There was a brief pause; then came the cryptic reply: "Marie Pinkerton!"

"Of course you'd say that?" she exclaimed with a little grimace, as she closed the door.

"That's the family joke," she said. "When Douglas and I were abroad, we had an Italian boatman one day who appeared to be very much interested in us. As a rule, everybody seemed to know all about us. But this man had to ask—and did. When he had found out who Douglas was, he wanted to know about me."

"Douglas became quite pompous. 'Why,' he said, 'my wife is Mary Pickford, the best-known woman in America!'"

"Is that so?" said the man. "Well, Mr. Fairbanks, you are of course very wonderful. But Marie Pinkerton! You will have to admit that she is even more famous than you are!"

## Spring Fever

(Continued from page 51)

ought to be known better, which fact makes it impossible to get any sympathy, even from ourself. Yes, spring is the time of the year when the office force commences to long for the great out-of-doors and tears off to the first Wild-West picture that shows at their theatre to revel in the clean air of Arizona. I personally myself advise they should actually put this impulse into railroad or jitney tickets every once in a while—there is no cure like a hair of the bug that bit you!

Not that I have got anything against the country except the taxes. Not much, the country is where I live 99¼ per cent of the time. I am merely pointing out where strong medicine should be taken only in small doses by them who are not used to it, especially these days when you never know what you are getting because while the bootlegger himself may be perfectly honest, why somebody may have put it over on him see, as George so truly says! I like the country best, even in spring when the roads is so bad and it's hard to get any decent canned vegetables on account they have not stocked up yet for the summer visitors, and you can't decide whether or not to take off the storm-door for you don't trust this weather because it's most unusual, same as it always is. Indeed I do love the country and I only come to New York whenever I get the opportunity.

In the good old days when things were not like they are now but a whole lot worse, housecleaning, sulphur and molasses and a young man's fancy used to be featured heavily in all spring scenarios. How I look back on those splendid, by-gone times when Mother used to worry the heavy parlor carpet with a vigorous broom, hounding the dust from corner to corner and back again, finally the both of them giving it up just about where they had started, exhausted yet happy, for all

## A New Ford for \$4<sup>20</sup>

For about four dollars you can put a durable, weatherproof, heat proof and *waterproof* coat of Valspar Enamel on your Ford Sedan! For about two dollars you can buy enough for an open Ford. You will give it that "spruced up" appearance that makes people stop and wonder when you got the new car.

Valspar Enamels withstand the destructive action of gasoline, oil, acid, and alkali. Their toughness resists scratching and abrasion—neither vibration nor sudden change of temperature causes them to check or crack.

Even boiling water from the radiator will not turn Valspar Enamels white.

And best of all, Valspar Enamels are easy to apply. Anyone can do the job.

So why not have a fine new-looking car to drive in.

Valspar Enamels come in 12 standard colors—Red—*light or deep*; Vermilion; Blue—*light, medium and deep*; Green—*medium and deep*; Ivory; Bright Yellow; Gray and Brown. Also in Black, White, Gold, Bronze, Aluminum and Flat Black.

Send for color card  
and instructions

was just as before. How I look back at it and down on it and everything!

As for sulphur and molasses, well I never saw both in the same place at one time. But I thought I had better mention them to make the story sound kind of complete.

In our family we don't do spring house-cleaning. In fact we don't do any at all. The Whoosis Vacuum Co. does it every once or twice in a while when we can think of and afford it both at once. George says in his lucid intervals that I am a perfect wife, because I leave things lay so he can find them where they fell. Under pressure he will even admit that the most of the things I have to find for him, why he cleaned them up himself!

I don't suppose our family is average, but I will mention here one very peculiar fact that I have noticed about us and spring, which is that, while all the year around you got a feeling the garage men is not as truthful as some, why in the spring you know it. Every autumn they will tell you that the spring is the best time to sell a second-hand car, and it listens like reason. But when spring spreads forth her challenge to long underwear why we find out that the garage-man was and is what Geo. Wash. was and is so well noted for not being. The truth of the matter is that the best time to sell a second-hand car is a year from whatever time it is when you want to sell it.

When I was so much younger than I am now that I used to make out I was older, a person could detect signs of spring in millinery shops, and a part of that ½ melancholy x dreamy = restless feeling in the part of females located just below the neck, was due not to spring per se, as the French say, but the fault of the milliners, which they would deliberately go and fill up their windows with the kind of reasons why girls leave home. A person could tell it was going to be Easter pretty soon just by looking at the straw hats all trimmed with flowers and California fruit. But now-a-days there is no use trying to check up the calendar that way because straw hats for females don't come into demand much after Jan. 1st and the Easter millinery will all very likely have fur around the brims to keep the women's brains warm. Well, I don't want to make no personal remarks especially in print, but I will say that at my Thursday bridge club I have seen reasons for them hats, and where a woman which was your friend until she was your bridge-partner and even kept it up until she reneged, well, in such a case, winter or summer their head is apt to remain solid ice unless protected properly.

A few other remarks could be passed about spring, such as ain't it curious how dagoes will spend hours of it digging dandelions out of your lawn free gratis for nothing, when later in the season you couldn't hire these same ones to do it for love nor money. Or a person, if they hadn't been told not to bother writing the article might say that spring is another of the times when you find out that skirts is going to be a different length and that the cook is leaving, because both observations is pretty safe for any season.

But if in spite of instructions not to write no article on spring, a person was to go ahead and do it anyways, why it would

The crate on the left is one of several crates designed for a manufacturer of automotive axles. It takes the place of the crate shown on the right.

The advantages of the new crate are: a marked saving in lumber; a considerable decrease in weight; more rigid construction; prevention of side play; better protection for the drum; lessened labor cost.

A further instance of what Weyerhaeuser Crating Engineers are doing for shippers every day.

## Better Crates with Less Lumber

**A** YEAR'S experience with our special Crating Service has brought out one very significant fact.

It doesn't pay a concern to be too sure that its crating practices cannot be improved.

Some of the most startling savings our Crating Engineers have effected, have been made for concerns who were entirely satisfied with the containers they were using.

A year's work among many industries in many parts of the country has proved that in the great majority of cases our Crating Engineers have been able to build better crates with less lumber. And where savings in lumber have not been possible they have built stronger crates and effected other savings of equal importance.

**H**ERE in brief is the story of the two crates pictured above:

The new crate, designed to carry a 3-ton truck axle, requires 36.3 feet less lumber—a saving of 52%.

It weighs 112 pounds less than the old crate.

These two items represent a saving of \$2.02 per crate.

Labor cost is reduced approximately 50%.

The structural advantages of the new crate over the old one can readily be seen: the lock corner construction makes it stronger and more rigid; the notches in the end members prevent the side play which often weakened the old crate in transit; redesigning of the side members

affords better protection to the brake drum.

Shippers who have adopted scientific crating report other advantages—of perhaps even greater importance than factory savings. It eliminates damage claims and speeds up collections. It decreases sales resistance and so gives the salesman a new selling tool. Safe packing builds good will.

**T**HE services of Weyerhaeuser Crating Engineers are offered to executives of business concerns—by appointment on request.

There is no charge for this service. This organization feels that the position of lumber as the standard material for shipping containers imposes the obligation to deliver 100% value with every foot of lumber we sell.

For crating purposes, this organization supplies from its fifteen distributing points, ten different kinds of crating lumber, of uniform quality and in quantities ample for any shipper's needs.

A booklet, "Better Crating," which outlines the principles of crate construction and explains the personal service of Weyerhaeuser Engineers, will be sent on request to any manufacturer who uses crating lumber.

Weyerhaeuser Forest Products are distributed through the established trade channels by the Weyerhaeuser Sales Company, Spokane, Washington, with branch offices at 208 South La Salle Street, Chicago; 220 Broadway, New York; Lexington Building, Baltimore; and 2694 University Ave., St. Paul; and with representatives throughout the country.

**WEYERHAEUSER FOREST PRODUCTS**  
**SAINT PAUL • MINNESOTA**

*Producers for industry of pattern and flask lumber, factory grades for remanufacturing, lumber for boxing and crating, structural timbers for industrial building. And each of these items in the species and type of wood best suited for the purpose.*

# Do you buy your bedding as intelligently as your clothes?

When you purchase a suit, a dress or a coat, you insist on knowing exactly what you are getting—all-wool, silk, linen or cotton.

When you buy a mattress and spring, does the same intelligent care and knowledge of the best materials guide your choice?

Yet the garment is worn for only a season or two, while the bed—good or bad—settles for many years to come whether you enjoy deep, strength-restoring rest or suffer broken, irregular sleep and all its serious consequences.

Set aside enough time today to call on your furniture dealer and examine the Simmons springs and mattresses he has provided in a wide variety of styles and prices to suit any income.

Test them all. Compare the bed you are using with a Simmons spring and mattress of fresh and buoyant *new* material, that fully meet your ideas, needs and tastes.

Then decide for yourself whether vigor, energy and personal success are not worth more than the cost of Simmons sleep comfort.

BUILT FOR SLEEP

# From the Great White Way to the Great White Spaces

Get away from the grind of your daily routine. James Oliver Curwood is waiting to take you, while you sit in your easy chair, to the magic outdoors of the great Northwest, where thrilling adventures make your blood run fast.

This great author knows the outdoors of the wilderness more intimately than any other writer. His absorbing tales of their adventures are told in the range of country where no hunters go.

## Pack up your troubles and follow CURWOOD into Adventureland

COME to the great magic land of the Northwest—come where the breath of Romance stirs in the blood of men and women—come to the land of adventure, strange, enchanting, wondrous. Stand under the great open sky—gaze at the wondrous Red Moon and the North Star—hear the cry of the wolf pack—thrill to the magic of the forests—sit by the soft glow of the camp-fire—come to the top of the world and feel the spell of the vast

white wilderness! You do not have to stir out of your easy chair to do it.

James Oliver Curwood takes you to the North Country, where splendid adventures are always happening—where romance steadily spins her golden web of enchantment. Here is great drama, played by great and fearless men who quicken your red blood and lift you clear of care and worry, carrying you far and happily into Adventureland!

## 6 Complete Novels—James Oliver Curwood Now at a Special Price

"The Hunted Woman," "Baree, Son of Kazan," "God's Country and the Woman,"  
"The Grizzly King," "The Courage of Marge O'Donoghue," "Nomads of the North."

There never was a writer with the compelling power of James Oliver Curwood. His books have that gripping, brutal interest of big things done in a big way. Whether you read about "Baree, Son of Kazan," the story of the little Indian wolf-dog, or about "The Hunted Woman," the appeal fairly takes you by the heart. You find yourself gripped by the great writer's power. As his hand has done before, he brings to you the atmosphere of the North, the appeal and mystery of

the wilderness, the power of man and the overpowering domination of great, untamed natural forces.

Here are the houses and tragedy, the great and dramatic of a great and glorious country. More than 1,000,000 copies of these books have been sold. The tales have been masterfully made by moving picture companies.

And now you have the opportunity of obtaining a beautiful, attractive set of

James Oliver Curwood at an unimagined price. At last, this world-famous author is brought within the reach of everybody. The set is quick to read in the evening, remember—you can afford a wonderful six-volume set of James Oliver Curwood for practically half price! A set which is beautifully bound in dark leather cloth, with the titles printed in gold, that will regularly for almost \$20.00. All the printed price.

# These men made your telephone

*Japanese.* Prepares the silk used in the covering on the telephone cord.

*British Indian.* A swarthy miner of mica—insulation inside the telephone.

*Brazilian.* He drains rubber from a tree. Rubber forms the case of the receiver.

*Irishman* raises flax, from which is made linen paper—used in the condenser.

*Pennsylvanian* coal miner. Grains of coal, inside the transmitter, are the vocal cords of your telephone.

*Russian.* He mines the noble metal, platinum, used in your telephone.

*Egyptian.* We must go to the Nile Valley for certain cottons used to insulate wires.

## —and the workman at Chicago

FROM a slab of rubber, a bundle of vegetable and animal fibres and a curious medley of minerals brought from every corner of the world, this man's skill produces a marvel of precision and ruggedness—your telephone.

He is one of 28,000 men and women at the Western Electric works in Chicago. As makers of telephones and the countless items of telephone apparatus, they are setting the standard for the whole world.

## Western Electric

Since 1869 Makers of Electrical Equipment

No. 2 of a series on radio materials.

Amid strange scenes in strange lands, the picturesque types above are gathering some of the 19 materials needed to make your telephone.

*Alaskan.* Your telephone needs gold too, and here's the man who digs it.

what goes on in his men's minds and hearts when they're away from work. One's home life has a whale of a lot to do with one's efficiency.

"Several years ago one of my drivers, a man with a top-notch record, ran into an expensive limousine. The automobile was badly smashed, and we got a big bill for repairs. The investigations of the foreman and superintendent showed that the accident had resulted from nothing but downright carelessness on the part of the driver. So his discharge was ordered.

"Now, I have a rule that any man who is discharged from this company has a right to appeal to me personally. And if he doesn't appeal to me I'm likely to send for him. Which was just what I did in this case.

"Now, tell me all about it, Jim," I said, when the driver had drawn up his chair.

"There's nothing to tell, Mr. Ritchie," he said, his voice getting a bit husky. "I was to blame. I haven't got a leg to stand on. My mind was wandering, and I never saw the blooming machine until I had crashed into it."

"But, Jim, if you weren't thinking of your driving, what were you thinking of?" I persisted.

"Well, Mr. Ritchie, if you must know, I was trying to puzzle out what I could do. You see, my wife's sick and ought to be in the hospital, and doctors' bills have been heavy, and I haven't got the money to send her there, and—" The tears came into his eyes.

"COULD you blame that poor chap for letting his mind wander? And to think that we almost fired him!... What did we do? Why, we sent his wife to the hospital and sent him to the country for a fortnight. She came back well, and he came back happy, and he remained there after one of our best drivers!

"Just from a selfish standpoint, it's to our interest to see that our men and their families are healthy and out of trouble, to see that they lack none of the irreducible fundamentals of sound living.

"Our men and their wives know that this interest of ours is genuine. That's why they respond to it. And, let me tell you, it's a good thing for any company to stand in right with the women-folks in the homes of its workers. If industrial misunderstandings arise, it's the wife who says, 'Here's your pail, Bill! Take it and go to work. The company's been square with you, and it's up to you to stick by it!' Or else, 'They've trimmed you, Bill, every chance they've had. Now here's where you can get back at 'em! Don't worry about me and the children. We'll make out all right.' And Bill is pretty likely to do what she tells him."

Ritchie is one of those big-hearted individuals who are never quite so happy as when they are doing something for someone. He is continually furnishing free rides in his busses to convalescing ex-service men, delegations from orphan asylums and old folks' homes, and other inmates of hospitals and social service institutions.

Not so long ago a school-teacher in the slum districts was anxious that a score of her shut-in youngsters should have a chance to tour the city in a bus. However, none of them could afford to pay more than ten cents for the ride. Ritchie turned a car over to the little troop. When

## Look Tomorrow

Note the glistening teeth you see

Wherever you look you can see, if you will, the evidence of a new dental era.

Millions of people are brushing teeth in a new way. Not in America only, but all the world over. For leading dentists of some fifty nations are advising this new method.

### The war on film

Dingy teeth and most tooth troubles have been traced to film.

Film is that viscous coat you feel. It clings to teeth, enters crevices and stays. Food stains, etc., discolor it. Then, unless removed, it forms cloudy coats. Tartar is based on film.

Film holds food substance which ferments and forms acid. It holds the acid in contact with the teeth to cause decay. Germs breed by millions in it, and they cause many serious troubles.

### Became alarming

The situation became alarming. Tooth troubles constantly increased until very few escaped. Beautiful teeth were seen less often than now.

So dental science began a search for effective film combatants. Two were found. One acts to curdle film, one to remove it, and without any harmful scouring.

**Pepsodent** PAT. OFF.  
REG. U.S.

The New-Day Dentifrice

A scientific film combatant, which whitens, cleans and protects the teeth without the use of harmful grit. Now advised by leading dentists the world over.

Able authorities proved these methods efficient. Then dentists everywhere began to advise them. A new-type tooth paste was created, based on modern requirements. Those two great film combatants were embodied in it.

The name of that tooth paste is Pepsodent. And wherever careful people live it is being used today.

### Fights acids, too

Pepsodent also multiplies the alkalinity of the saliva. That is there to neutralize mouth acids, the cause of tooth decay.

It multiplies the starch digestant in the saliva. That is there to digest starch deposits which may otherwise ferment and form acids.

Those are Nature's great tooth-protecting agents in the mouth. Pepsodent, with every use, multiplies their power.

### Easy to prove

Pepsodent quickly proves itself. Send the coupon for a 10-Day Tube. Note how clean the teeth feel after using. Mark the absence of the viscous film. See how teeth whiten as the film-coats disappear.

If you watch the results for a single week, you will want them always. Cut out the coupon now.

### Avoid Harmful Grit

Pepsodent curdles the film and removes it without harmful scouring. Its polishing agent is far softer than enamel. Never use a film combatant which contains harsh grit.

## DIFFERENT from ALL OTHERS!

Mouth acidity is the cause of most dental disease and decay. Dentists and physicians have prescribed Squibb's Milk of Magnesia for years to neutralize acidity, and as a protection for the teeth and gums. No product ever employed does this as effectively and as safely as milk of magnesia!

Now, after exhaustive research by the Squibb Laboratories, this beneficial product has been incorporated in a scientifically correct dental cream! This great achievement eliminates all necessity for risking injury to your teeth and gums in order to keep

them clean and attractive! You can use Squibb's Dental Cream with absolute confidence, knowing that it embraces every principle that dental authorities declare essential for the care of the teeth and gums!

It polishes the teeth beautifully! It neutralizes mouth acidity—and in this way helps to prevent tooth decay, pyorrhea and other dental diseases, and it does this safely and pleasantly—no other dental cream can possibly do more!

Prove it yourself! Mail the coupon below for a free trial-size tube.

THE "PRICELESS INGREDIENT" OF EVERY PRODUCT IS THE HONOR AND INTEGRITY OF ITS MAKER.

the long ride was over he ordered the driver to stop at a fashionable restaurant. Here the children were treated to all the ice cream they wanted.

The company received two dollars and twenty cents in fares. Ritchie's ice-cream bill was exactly thirty-three dollars.

Whenever a service complaint is received, "Smiling Jack" Ritchie personally dictates the company's reply. He has a gift for letter writing very reminiscent of that for which the late Mayor Gaynor, of New York, was famous. In his letters one finds the same homely philosophy—as well as the occasional sharp barb that leaves no sting. If the investigation of a complaint shows that the conductor or the driver was not at fault, Ritchie stands squarely behind him. In the event of unjustified and unprovoked abuse, he does not mince words. To the writer of one savage letter he replied in part:

Your spleenful designation of the conductor (although he was partly wrong) as a "stupid fool" rather aroused my resentment—a resentment that gradually melted into sympathy as I realized that with a disposition as cantankerous as that displayed in your letter, what an utterly unhappy and lonesome individual you must be!

Then there occurred to my mind the legend of an old European innkeeper had inscribed on the wall of his inn: "You will find at Trochate excellent bread, meat and wine—provided you bring them with you."

This philosophy is equally true with courtesy and respectful attention and consideration, provided, again, that you take these excellent things with you wherever you go; in which event, you will invariably find everyone you meet as respectful, polite, and courteous as you yourself.

THERE are many more letters of a similar tenor—showing both a sense of justice and a sense of humor. Ritchie dearly loves a joke, and he laughed merrily as he told me a number of little incidents that he had heard from his men.

"One afternoon," he said, "a conductor, as he was collecting the fares on top of a full car, noticed a little youngster in his mother's lap who was watching him eagerly and crowing at each tinkle of the bell that followed the insertion of a dime into his automatic receiver. After making the rounds, the conductor had got half way down-stairs when he was called back by the woman with the child.

"'Young man,' she asked, 'won't you let Baby have your bank to play with? He just loves to hear the bell ring!'

"But we've had stranger requests than that. I remember the case of one woman who asked the conductor if he had a city telephone directory, and seemed rather indignant when he told her that he hadn't. What she expected to do with a telephone book while riding on a bus was a secret that she did not reveal.

"Perhaps the most extraordinary of all incidents, however, occurred a while ago on one of our most fashionable routes. A well-dressed woman who was strolling along the sidewalk suddenly held up her hand in signal for a passing bus to stop. As the driver brought the big car to halt, she walked leisurely up, put on daintily shod foot on the step, tied her shoe lace, stepped back to the driveway with a pleasant smile and a 'Thank you'—and motioned for the bus to proceed.

"On another occasion, during a severe summer shower, a young woman asked

## The Gulbransen Educates, Inspires, Entertains

*Your son—your daughter—*will take the Gulbransen right into their hearts and lives. First playing for the pure love of fun, they will unconsciously progress to an understanding and appreciation of the very best in music.

*You—wife—and you, yourself—*after the day's cares, need mental and moral stimulation. Surely the Gulbransen, playing delightfully any piece of music you wish to hear, provides that.

The Gulbransen entertains—and educates and inspires as it entertains. It will lift you out of the rut, broaden your vision, and make for higher ideals in your home life.

The Gulbransen is easy to play—and easy to play *well*. You'll be surprised how quickly you become skilled—how soon you learn to bring out the very soul of music. Four simple Instruction Rolls easily teach you how.

Call on your nearest Gulbransen dealer now, and play a Gulbransen, or write us for catalog giving full information.

## THE SHRINE

## OF CLEANLINESS

**L**ITTLE worshipers at the shrine of cleanliness, performing their devotions with soap and brush and towel . . . learning unconsciously, as Youth always learns best, the lesson that will serve them all their lives . . .

What better school can they attend than the modern bathroom? And what stronger urge can one have to make the bathroom the finest room in the house? Nothing can be too good for the home's shrine of cleanliness.

To have a bathroom fitted with Kohler Ware is to realize a deep-seated ideal of what is due to self and family. No fixtures more completely express the present-day standard of worth

and beauty in bathroom equipment.

In every city there are good plumbing dealers who have known Kohler quality for years and who will gladly advise you. You will find, we surmise, that Kohler Ware is much less expensive than you supposed, and that for a moderate investment you can have the bathroom you have pictured.

If it is an *extra* bathroom that you most desire, put it to the Kohler dealer to discover the surprisingly small space that will suffice.

\* \*

May we send you our booklet of Kohler Ware for bathroom, kitchen and laundry?

**KOHLER**

Look for the name "KOHLER" inconspicuously fused into the enamel of every Kohler fixture. It is your guaranty of genuineness and of these distinctive Kohler qualities — (1) the beautiful snowy whiteness of the durable Kohler enamel (2) the uniformity of that whiteness in every Kohler fixture

the conductor if he would not have the driver run her over to her home, more than three blocks off the route, in order that she might not ruin her new hat. The conductor explained patiently that, while the car did not run on rails, it could hardly be considered part of its contract to go three blocks off its beaten route, particularly with twenty or thirty other passengers aboard. She appeared very disappointed.

"At one of our busiest corners an elderly woman, richly dressed, started to board the car with a big Newfoundland dog which she had on leash. The conductor informed her politely that no dogs were allowed to ride.

"Very well," she said, with a resigned air, "I'll let him run behind. But you must instruct your driver not to go too fast, and not to get in very heavy traffic, for Prince has a sore foot that interferes with his running."

"As in all transportation companies, a goodly percentage of our men are Irish, and frequently they manage to save a situation with a jest. On last Washington's Birthday afternoon a well-loaded bus drew up at a busy corner. Two women, one elderly and the other young and good-looking, started to get aboard.

"One seat on top, one seat inside!" called out the driver.

"My dear man," expostulated the elder woman, "you wouldn't separate a daughter from her mother, would you?"

"Sure an' I wouldn't!" he grinned, giving two bells for the car to move on. "I did it once in my life, and I've been regretting it ever since!"

**RITCHIE** was born forty-four years ago in Halifax, Nova Scotia. He was the only boy in a family of seven. His father, a brawny Scotchman, served as engineer on small Cunard liners plying between Nova Scotia and South America.

When Ritchie was three years old his father gave up the sea and brought his family to Brooklyn, New York. Two years later he moved to Freeport, Illinois, where for a short time he held an important position in an infant beet-sugar enterprise. Presently the enterprise collapsed—and it proved to be the last steady job that the former engineer was destined to hold.

Ritchie's childhood was far from happy. So tongue-tied that no one but his mother could understand him, he always felt ill at ease in the presence of strangers. It was only after long, patient practice in slow speaking and singing, under his mother's constant guidance, that he finally mastered his impediment, and was able, at the age of nine, to enter school.

During his brief period of schooling, the boy managed, by selling papers, mowing lawns, picking berries, and husking corn in the local canning factory, to earn enough money to pay for his clothing and books and to give his mother some slight assistance in her struggle to make ends meet. At fourteen he left school altogether, to become office boy for a local manufacturing concern. His wage was three dollars a week.

To the healthy, high-spirited boy, the dull round of licking stamps, sweeping floors, running errands, and copying correspondence in the big letter press eventually became irksome. The most interesting feature of this phase of his career

## Some Will Keep Their Youth and Beauty

The bride who starts with old, out-of-date kitchen methods that make work hard and hours long, will probably leave her charm in the kitchen.

But if she starts with modern, time- and labor-saving appliances in her kitchen she will save herself many weary hours and many heartaches. One of the most important needs in any kitchen is a modern kitchen cabinet.

The wide preference for the Sellers is due not only to its beauty, but to the wealth of labor-saving features which have been developed by Sellers and which are combined in no other cabinet.

There are, for example, the Automatic Lowering Flour Bin; the Automatic Base Shelf Extender; the Sanitary, Acid-Proof, Porcelain Work Table; Extending Table Drawer Section; the Special Silverware Drawer; Ant-Proof Casters and many others.

See the local dealer who carries the Sellers. He will tell you that a Sellers, even with its many conveniences, costs no more than any good cabinet. And most dealers will gladly arrange terms to suit your income. If you do not recall the Sellers dealer, please write to us.

# CURTIS Woodwork

The makers of Curtis Woodwork  
guarantee complete satisfaction to all users.  
"We're not satisfied unless you are."

Like other fine products, Curtis Woodwork is patented. But only the genuine carries with the trademark "Curtis" and the year "1866," when Curtis Woodwork first appeared.

Only the genuine gives the quality and proven value which is the direct result of Curtis' plan. The only way you are sure of getting it is by looking for the Curtis trademark.

Curtis Woodwork is manufactured on the principles of large production and rigid inspection, careful workmanship, and lowest cost.

For your local Curtis dealer show you the Curtis trademark. Or write to the Curtis Co., 453, Clinton, Iowa.

## What Kind of Woodwork Do You Like?

Now-a-days you can choose it as you do your furniture or automobiles

**WOMEN** will spend days selecting beautiful rugs, pictures or china.

How much more important is their choice of woodwork, which gives the home its character, affords a setting for all its treasures and lasts a lifetime!

Today, at slight expense, you can enjoy the woodwork and built-in pieces that once graced only mansions.

This has been made possible by quantity production. Curtis designs are drawn by famous New York architects. The same careful selection of woods is made, and the same skillful workmanship prevails as if the woodwork were for you alone—only modern, automatic machinery reduces the former high cost of production.

The stairway shown on this page illustrates the refinements that are apparent in any piece of Curtis Woodwork you may select. Every detail of this stair is completed at the factory. Your carpenters save hours of labor, and need only to set it up. Each piece comes marked. No nails mar its appearance, as the treads are wedged into the risers. The balusters dovetail into the treads, making a foundation that holds the hand rail strong and firm.

Whether you merely want a door or a bookcase—or woodwork for an entire house, it will pay you to look over the designs at your local Curtis dealers. If intending to build, he can get you a \$1 plan book free.

Entrance C-105. Did you know there are 28 standard types of entrances? You will find one to suit you in our free booklet "Entrances and Exterior Doors."

Mantel C-547. Suitable for the Colonial or English home. There is a type of fireplace for every home, so you will find by asking for our free booklet on "Permanent Furniture."

was the manner of his quitting it. At the end of two years he was discharged for throwing wet copying rags at his boss's demure young secretary.

His next job was as stock and shipping clerk for a manufacturer of hardware novelties. This brought him into contact with the railroad. The bustle and bigness of the transportation field touched his imagination, and at the age of eighteen he left his factory job to start in pushing baggage trucks at the Freeport station of the Illinois Central Railroad. From this time the support of the family fell entirely upon his shoulders.

While juggling baggage for fourteen or fifteen hours a day, Ritchie felt the first summons of a definite ambition. He decided that he would like to get out of overalls and become cashier of the Freeport station. Realizing that he needed more education to hold down such a position, he began to attend night school.

During his service as a baggage man, the hardships of his lot, together with the periodical cuts in pay and lay-offs without notice, to which most of the railroad workers were subject, fired Ritchie with a sense of injustice. Not only did he become a radical union labor man, but he took a solemn oath that if ever he got in a position of authority he would treat his men as he himself would like to be treated.

**FROM** the time he finished his night-school course, Ritchie forged rapidly ahead. Within a few years he was promoted from truck pusher to warehouse foreman, freight clerk, billing clerk, night ticket agent, general night ticket agent, and finally yardmaster at Freeport. The fact that he had studied stenography and bookkeeping at night school made possible his subsequent promotion to division accountant. Later he became chief clerk to the superintendent of the Freeport Division.

Before long Ritchie demonstrated that he had a genuine genius for analyzing figures. In those days, steam railroad costs were arrived at in rather a hit-or-miss fashion. The young Scotchman decided that every item of railroad operating expense should be trailed to its lair, and charged definitely against the department or departments responsible for it. Moreover, he was able to take a tangled mass of data and reduce it to such simple terms that any intelligent worker could understand it. Presently he was given a free rein in this field, with the self-created title of "operating statistician."

Eventually John F. Wallace, vice president of the Illinois Central, transferred Ritchie to his own office, where he could take the whole road as his field of investigation. Here he made a study of every angle of operation. His researches attracted national attention.

In 1907, twenty-seven vice presidents and comptrollers of important steam railroad lines in the United States were summoned to Washington to give testimony before a Congressional commission. Ritchie was also asked to attend—as the sole representative of the practical operating men of the country. The range and comprehension of what he had to say on the stand was probably the high light of the entire hearing.

At this time Theodore P. Shonts had just finished his work as chairman of the

## Woman's Work is Simplified— Time, Strength and Money Saved

C. H. LEONARD

Wide-awake women are delighted to learn how the Leonard saves and serves; how it makes meal-planning easy, saves time and toil, and gives the housewife extra hours for rest and recreation. The Leonard will keep your meats, salads, vegetables and fruits fresh, sweet and clean.

Ten walls of insulation are built into the Leonard to prevent the cold escaping and heat entering. Ice lasts longer in the Leonard—another great economy.

The Leonard food chamber is one piece triple-coated with porcelain. No seams or cracks. No scratch can mar it. Corners are

rounded. Porcelain extends clear around the door frame. Easy to clean. Many other Leonard perfections. Furnished with water coolers and outside icing doors when desired.

One out of every six refrigerators sold is made by Leonard. It's real economy to get your refrigerator one size larger than you think you need. Ask why before you buy.

See the nearest Leonard dealer. If you cannot find him, write us and we will see that you are supplied.

## Leonard CLEANABLE Refrigerator

*"Like a Clean China Dish"*

Send for actual sample of porcelain, and catalog illustrating over 75 styles and sizes of refrigerators. Mr. Leonard's own booklet on "Selection and Care of Refrigerators" will be mailed, too.

## There's no wear-out to lead

**W**EATHER and time have no effect on lead. You can place it underground and leave it there for centuries. Or you can put it on top of the tallest building and subject it to every attack of wind, rain, and storm.

For roofs of buildings and for rain-water drainage, lead has been used for several centuries. A leaded dome dated 1553 still stands intact on Barnard's Inn Hall, in London. On an outer wall of Windsor Castle, England, a pipe-head made of lead has served since 1589. The cathedrals of France have been protected by lead roofs since mediæval times.

### Lead on the roof

Lead in the form of Hoyt Hardlead sheeting is used on many buildings today where permanent, water-tight roofs are desired. This lead hardened with a little antimony has less weight per foot than ordinary metallic lead. It is rust-proof and lasts longer than any other metal suitable for the same purpose.

This same hard lead is employed in other ways than as sheeting for roofs. On many of the finest buildings in this country are pipe-heads, leader pipes and bands, gutters, hangers, flashings, copings, made of lead to insure protection against rain and storm. This lead is also used in the construction of skylight framework and ornamental figures.

These are parts that are usually costly and difficult to renew. But make them of lead and after the first cost there is no other.

### Keeping this lead in place

These building products are not only made of lead, but lead in the cinch expansion bolt assists in fastening them to the building. These bolts and lead-coated screws and nails help to secure gutters, bands, and other parts of the lead drainage system to the walls. And they do not pull out.

### Where you know lead best

There are a hundred-and-one other uses to which man has put lead. None of them, however, is so familiar as that of lead as paint. Tons of pure metallic lead are corroded every day to produce the white-lead that protects the outside walls of thousands of houses.

Manufacturers know the value of white-lead in making paint and use white-lead as the principal ingredient in the paint they make. The professional painter puts on what he

"Save the surface and you save all" — Dutch Boy

calls "lead-in-oil," which is pure white-lead mixed with pure linseed oil.

Property owners are becoming more and more aware of the necessity of protecting their houses against deterioration. "Save the surface and you save all" is a truth wise men do not deny. And they are saving the surface and their investments with white-lead paint, which is impervious to moisture and adds indefinitely to the life of a building.

### Look for the Dutch Boy

NATIONAL LEAD COMPANY makes white-lead of the highest quality and sells it, mixed with pure linseed oil, under the name and trademark of *Dutch Boy White-Lead*. The figure of the Dutch Boy you see here is reproduced on every keg of white-lead and is a guarantee of exceptional purity.

Dutch Boy products also include red-lead, linseed oil, flattening oil, babbitt metals, and solder.

Among the other products manufactured by National Lead Company are came lead, litharge, lead wire, shot, lead wool, and lead plumbing materials.

### More about lead

If you use lead, or think you might use it in any form, write to us for specific information.

### NATIONAL LEAD COMPANY

Isthmian Canal Commission and was on his way to New York, where he had been called to take charge of the tremendous transportation problems involved in the metropolitan maze of subways, elevated railroads, and surface lines. A recognized leader in the railroad field, Shonts had retained his interests in the Chicago and Alton, the Iowa Central, the Minneapolis and St. Louis, and the Toledo, St. Louis and Western railroads, while he had been bossing the digging of the "Big Ditch." So he stopped off at Washington to consult with several of the executives at the conference.

"You ought to drop in at the hearing and listen to this man Ritchie of the Illinois Central," Shonts was told. "He's the only operating man we have ever seen with a thorough understanding of railroad finances."

Shonts adopted the suggestion. For half a day he watched and listened to the young Scotchman from the Illinois Central. Then he left for New York. Several weeks later Ritchie received a telegram from Shonts asking if he could come to New York at once. The ensuing conference resulted in Ritchie serving for several years as Shonts's confidential adviser, both as to the finances and the operation of the lines under his control.

In addition to running the subways, elevated roads, and street-car lines, Shonts was a guiding force in the financial direction of the Fifth Avenue Coach Company. Worrying over the diminishing profits of the green bus lines, he made Ritchie president, with instructions to put the company back on its feet. Both men thought that the appointment was temporary. It turned out, however, that in this new job, with its intimate human associations, John A. Ritchie had found his real life work. The only reason he accepted the Chicago offer was because he felt that he was being given a wider opportunity for services.

## Have You Quit Asking Questions?

(Continued from page 41)

laboratory has come our ability to make dyes out of coal tar, and perfumes and flavoring extracts out of the same black, sticky refuse.

Out of the curious experiments of the laboratory at any time may come some discovery that may devastate the earth or change the entire conditions of the dispute between labor and capital; or some new force from the atom that shall relegate the steam engine and the gas engine to the scrap heap.

This is an age of research. And research is at least one-half monkeying.

We want our children to amount to something, to have forceful personalities. The degree of force that a person has depends entirely upon the amount of urge or desire there is in him. And chief among these urges is curiosity.

This urge may be frittered away, just as we can fritter away money or love. It may result in making us simply busybodies. When we run to the window to see who is calling at our neighbor's across the

## Know the Joy of A Smooth Healthy Skin

THE first step towards attaining a healthy skin is right living—spending hours in wholesome outdoor activities, etc. But the second, and equally important, is *proper* cleansing. Your skin is like a delicate fabric—easily injured by rough scrubbing or the use of a harsh, caustic soap. Why run the risk of hurting it by using anything that happens to be handy, when you know that Resinol Soap protects it?

Try this exceptional toilet soap for your complexion and see how gently yet thoroughly it cleanses the pores and helps to overcome skin defects. Take a Resinol bath and note the healthy glow that follows. Place it in the nursery and keep baby sweet, clean and contented.

A trial size cake will prove to you the delights of Resinol Soap. May we send you one free? Write Dept. 4-G, Resinol, Baltimore, Md.

BUY RESINOL SOAP BY THE BOX FROM YOUR DRUGGIST OR TOILET GOODS DEALER

# Resinol Soap

HEINZ has developed a new delicious, prepared food—ready to heat and serve. A durum-wheat macaroni made by Heinz, cooked with a specially imported cheese and an appetizing mushroom sauce—a wonderful combination of food and flavor. You can serve it every day and for your best occasions. Try it; your grocer will refund purchase price if it fails to please you.

street, when we open and read another person's letter, when we listen in at a telephone conversation or peep through keyholes—that is curiosity run to waste.

It is a morbid curiosity that makes us like to read details of scandal in the newspaper and tattle about the intimate concerns of people that are none of our affair.

But we are guilty of loose thinking when for this reason we condemn all curiosity. For the desire to know is a precious and indispensable element of the human mind from which all great human achievement has arisen.

Robinson, in his interesting book "The Mind in the Making," tells of Galileo, whom he describes as a thoughtful youth and doubtless given to rich and varied revery. One day when seventeen years old he wandered into the cathedral of his native town Pisa. In the midst of his revery he looked up at the lamps hanging by long chains from the high ceiling of the church. Then something very difficult to explain occurred. He found himself no longer thinking of the building, the worshippers, or the services. As he watched the swinging lamps, he fell to wondering if their oscillations, whether long or short, did not occupy the same time. Then he tested this hypothesis by counting his pulse, for that was the only timepiece he had with him.

**T**HIS curiosity, however, was not enough to produce really creative thought. Others may have noticed the same thing, and yet nothing came of it. To be really creative, ideas have to be worked up and then "put over" so that they become a part of the body of useful knowledge. Out of Galileo's curiosity about the swaying lamps in the cathedral came the highly accurate pendulum clock. From this also came the successful refutation of the old notion of falling bodies.

Newton, whose curiosity was said to have been awakened by the falling of an apple, eventually proved that the moon and all the heavenly bodies were also falling, and discovered the great law of gravitation.

On the 28th of October, 1831, three hundred and fifty years after Galileo, a man named Faraday was wondering what would happen if he mounted a disk of copper between the poles of a horseshoe magnet. As the disk revolved an electric current was produced. This would doubtless have seemed to be the idlest kind of curiosity to the solid business men of the time, who were just then denouncing the child-labor bills in their anxiety to avail themselves of the full results of earlier "idle" curiosity. Yet out of Faraday's curious experiment have come the infinite applications of electricity as motive power which have transformed the world.

There is no doubt that one kind of people who hold humanity back, who impede necessary reforms and keep the world enslaved, is the class we call reactionaries. These are the obstructionists. Professor Robinson truly says that these are not merely the stupid masses, but the rationalizing theologians and most of the philosophers and moralists, all "busily, if unconsciously, engaged in ratifying existing ignorance and discouraging creative thought." The great trouble with these people is their lack of legitimate curiosity. They are satisfied with what is, and do not sufficiently want to know what it is.

And now the question comes home to each one of us: Am I sufficiently curious to be justified in calling myself alive? And is my curiosity trained so that I am curious about the right things and in the right way? Or do my curious instincts simply dribble away into idle and perhaps vicious channels. Here are a few tests:

Take it in your business. Are you curious enough to want to know all about that business and everything that pertains to it?

And do you realize that the knowledge that such curiosity obtains would be to you a great source of power?

If you are a clerk in a dry-goods store, have you ever wondered about the different goods you sell, the silk, the wool, and the cotton, and where they all come from?

There are many things which distinguish the able business man from the amateur, and not the least of these is the fact that the master of any business takes pain to inform himself about everything pertaining to it.

If you are a school-teacher, are you curious enough to find out the various theories of education and to examine and test them in your classroom? Did you ever wonder why some pupils are quick and some are slow, and why a certain child will learn one subject eagerly and be very stupid in others? Without a healthy and persistent curiosity you will be a very poor school-teacher.

If you are a mechanic, are you satisfied with just doing the duties that fall to you, or are you inquisitive upon the whole subject, and do you spend much of your spare time in digging into the mysteries of mechanics, reading all sorts of books, talking with well-informed people, and making curious experiments? Whether you are going to be a great mechanic or a little one depends very largely upon the amount of curiosity that is urging you.

If you are a parent, are you studying your children as interesting problems, making a note of their peculiarities and trying to find out why they exist and how to handle them? Do you know there is such a science as child training and a lot of books published upon the subject? Have you ever tried to find out the laws of child growth and the best methods of developing intellectual and moral strength in your child?

**A**ND there are few people who have better opportunities for indulging a legitimate curiosity and equipping themselves with useful knowledge than the traveling salesman. You are visiting all sorts of towns and meeting all kinds of people. Are you curious to note their differences? And do you study over them and try to find out from them the best way to handle men, and the best way to increase your own efficiency?

Take it in the matter of books: Every book is a challenge to your curiosity. It is all well enough to read a magazine or a novel, and to spend from fifteen minutes to two days pursuing a lot of fictitious characters and following an involved plot to find out how it all comes out. This is indulging your curiosity. It is not necessarily bad. Fiction has its educational value. But does this sort of thing exhaust all your curious impulse? If so, you are apt to become sloppy-minded and vacuous. The mind that is fed on fiction alone will become as anemic as a body that is

# COLOR

**L**UXEBERRY White Enamel does far more than lend an atmosphere of simplicity and charm to the breakfast room.

Wherever it is used in the home it serves an important scientific function—that of raising the degree of all colors used in conjunction with it and intensifying their natural warmth and beauty.

Refinish your woodwork with Luxeberry White Enamel. Your rugs and draperies will possess new depth of tone, your furniture added richness and the walls a freshness that will delight you.

Unless you use Luxeberry Enamel you cannot hope for Luxeberry effects. Luxeberry is the standard of comparison among enamel-makers—and is without equal.

Luxeberry Enamel is made in white and six rare color tones. It is the achievement of the makers of Liquid Granite Floor Varnish and Luxeberry Wood Finish, the original hard-oil varnish.

## Make the Most of Your Spare Time

**T**HROUGH no other work can you obtain such a vast amount of fascinating, valuable, broadening information, in those spare minutes that otherwise would be lost to you forever.

### *Every page holds your attention*

Open a volume anywhere. You will find before you some refreshing, alluring page which you will read to the last word, all in a few minutes. It may be the history of Joan of Arc, a travelogue of Yellowstone Park, a chart of the planets, the story of a great painter or of an immortal piece of literature. Or, you will come to a handsome full-page plate (one of 720)—a painting of the Mayflower, a portrait of Napoleon, a famous cathedral, or some other beautiful picture on heavy, specially made plate paper. Every page contains something you will not only want to see and know, but something you will thoroughly enjoy.

The best minds in America have built this Mentor Library—great scientists, artists, critics, mountaineers, musicians, writers, and travelers. And every article is embellished with beautiful gravure and color plates and with a rich profusion of splendid text illustrations.

### **Simply sign and mail this coupon to-day!**

THE MENTOR ASSOCIATION, 416 West 11th Street, New York City

Send me, on approval, your Mentor Library in five volumes, with the special cross-reference index. If not satisfied, I may return the set after a week's examination, and you will cancel my order. Otherwise, I will remit \$3.00 each month until the full price, \$36.25, is paid. Until that time, title will remain with you.

### *Always timely—for every age*

Every Mentor subject is one of lasting value—literature, science, art, music, history, travel, etc. These handsome volumes widen your cultural background, bring you a thousand new and fascinating interests, round out your knowledge of the world's accomplishments, and give you a firmer standing among well-informed, successful men and women.

The man in his business, the woman in her club and among her associates and friends, the student in high school or college, will all find these volumes profoundly and genuinely helpful. And they will be just as fresh and living to your children's children years from now as you will find them to-day.

### *Owned by tens of thousands*

So great was the demand for this magnificent Mentor Library that only now are we in a position to make shipments. The set is handsomely bound in pebbled green cloth with genuine leather backs, gold titles, numbers, and designs. This durable binding is not only dignified and beautiful but will survive long years of the most constant handling.

### *Send no money now*

We shall send you the set on approval. You can pay for them in small monthly installments of \$3.00. After a week's free examination, you may return them at our expense, if not entirely satisfied, and we shall cancel your order. But lose no time! Only a limited edition is printed and they will quickly be exhausted. Mail your order to-day and receive the most beautiful and richly illustrated library ever published.

nourished by nothing but ice-cream sodas. Does not a scientific book ever challenge your curiosity? Or a book on economics or art or morals or history?

Of course it is harder work to study than it is merely to read; but that simply means that study requires more of the steam of curiosity to make it go, just as an actual railroad locomotive requires more steam than a boy's toy engine.

And the amount of enjoyment you get out of the world you live in depends largely upon how well your curiosity has been encouraged and trained. Haven't you noticed that you do not respond very well when people talk to you about the beauties of nature, and the joy that comes to us from the world we live in? That is because you have not been sufficiently curious.

**Y**OU walk through the forest as a stranger. Don't you ever wonder at the different kinds of trees, and want to know their names and their habits?

Are you acquainted with plant life and with the individualities of the different flowers and grasses and mosses?

Do you know the stars that have been looking down on you every night of your life—which are the planets and which are the fixed constellations? Do you know the rocks, or have you never been sufficiently curious to study enough geology to give you a pleasing acquaintance with the earth upon which you tread? Have you never been curious about the laws of chemistry and the composition of the foods you eat and of the clothes you wear?

If you had curiosity enough, and had it trained enough to push you forward in these directions, would not the world be a much more interesting place to live in? Would you not be less easily bored?

In your own home, have you any decent sort of an equipment of the machinery of curiosity? Have you an unabridged dictionary in which you can find out all about any new word you happen to hear? Do you have a gazetteer of proper names that can satisfy your curiosity about some person or place that has newly come to your attention?

Do you really care to know what is the proper pronunciation of this or that word, and have you a book that will tell you?

Have you an encyclopedia, and are you curious enough when you read about Armenia or Czecho-Slovakia or Uruguay in the newspapers, to go to it and find out just exactly the necessary facts? Have you an atlas, so that on the map you can satisfy your curiosity as to any unfamiliar place of which you have heard?

And, above all, are you bringing up your children with all the means of stimulating and training their healthful, natural, and creative curiosity, or are you letting their curiosity run wild, to lead them into inefficiency, idleness, and perhaps evil?

Are your children curious enough about their own bodies, to know what happens to their food after they have swallowed it, and why? A child is eternally asking why. And the more alive he is the more he asks the question. And are you just as constantly trying to equip yourself either to answer his questions or to show him how he can find out the answers for himself?

Curiosity is our most dominant instinct, and we would do well to give it its due attention.

Not only S W P. (the name of Sherwin-Williams house paint) but every Sherwin-Williams paint, varnish, stain or enamel is made especially for the surface it is intended to beautify or protect. You name the surface. Your Sherwin-Williams dealer will give you the right finish for it.

## Marrying an Empire

Marie—the dashing Queen of Rumania. There is about her the allurements of unproved scandal. The challenging air of adventure and romance—the tales of her love affairs—are almost unbelievable. And, like Eva Tanguay, she doesn't care. But beyond all she is the queen—the most piquant monarch and cleverest diplomat in Europe!

While doddering old men, worn out by a war that they never understood, are rattling around in the shoes of Disraeli, Gladstone, Mazarin, and Richelieu,

playing gingerly with that ineffective thing, the new diplomacy—Queen Marie of Rumania, by her woman's wit, is marrying an empire. And ever since the weddings of 1921, which tied Rumania and Greece into double bow knots, life with Queen Marie has been just one trousseau after another. Don't miss "Marrying an Empire," by Frederick L. Collins—a brilliant picture of Rumanian royalty—more alluring than the most fascinating fiction. It's in the May issue of WOMAN'S HOME COMPANION.

## She Was Always a Wallflower—Until

—well, until she met Lord Somerleigh. All her life Pamela (and she was all of seventeen) had been pampered by her artist father, who thought of her as an elf rather than a girl. She was something to look at and admire—something to paint in glowing colors. But as a real flesh-and-blood girl—the kind that a man would barter his soul for—impossible! All the desirable men at the Cape Cod summer colony thought so anyway—that is, all except Lord Somerleigh, and the way he discovers the real Pamela is an adventure in romance that makes Cinderella's experience seem like a slumming tour. Read this delightful Phyllis Duganne story, "Peter Pam," in the May issue of WOMAN'S HOME COMPANION.

## And in the Same Issue

"Settling Down in Polynesia," by James Norman Hall;  
"The Horseshoe Over the Door," by Elisabeth Sanxay Holding;  
"Bachelor's Wives," by Laura Spencer Portor;  
"The Stranger," by Beulah Amidon Radliff, and many other equally interesting stories and features.

## This Boy Had the Will to Conquer

(Continued from page 55)

in that first unhappy interview, gave me one piece of advice: to study with some good teacher. I never had done this, because I never could scrape up enough money. But now I redoubled my efforts, went without everything except the bare necessities of life, and so was able to have some lessons from Rudolf Ganz, the celebrated Swiss pianist who was then teaching in Chicago. He went back to Europe after a time; but meanwhile I had gained a great deal from his instruction—the only really good instruction I ever had."

"It seems too bad that some wealthy patron, or patroness, did not take an interest in you," I said.

"I'm not so sure of that," replied Boguslawski. "As a matter of fact, a rich woman did seem inclined to take me up at one time. But it involved a sacrifice of my artistic independence to which I could not consent. If the chance had come when I was a child, my parents and I probably would have taken advantage of it. But the struggles I had gone through had made me old for my years. They had also made me strong in my determination to own myself."

"WHEN a young artist becomes the protégé of some wealthy benefactor, this benefactor almost inevitably assumes a sort of proprietorship. The artist is at his patron's beck and call; and this, it seems to me, must inevitably undermine his independence, personal and artistic."

"It is quite different when the money is advanced as a loan to be repaid later. Some companies which manufacture pianos have done this. They finance a young artist, launch him, and advertise him. He repays the money out of the receipts from his concerts when he begins to give public performances."

"Even pianists who already have made a reputation, and who wish to give a season of recitals, are sometimes financed in this way. One very well-known man, a really distinguished pianist, told me recently that when he has repaid the advances made to him, and has discharged all the expenses of his season, he is lucky if he has four thousand dollars left for himself."

"I have never regretted that I decided to stand on my own feet. I continued to do this, by teaching and by playing at the everlasting round of Jewish weddings, until I was almost twenty. Then, one day, I met a musical friend who told me that the Kansas City Conservatory of Music needed someone to be at the head of its piano department. When I said that I would apply for the position, he laughed at me."

"What!" he said. "You think you could fill that position?"

"Yes, I do!" I declared. "I simply haven't had the opportunity to show what I am capable of. This will give me the chance. It will be sink or swim. But if I have to swim, or drown—well, I won't drown! I can promise you that."

"He looked at me for a moment, then

*Crane Beauty in the Open  
Crane Quality  
In all Hidden Fittings*

The remarkable development of water, heating and sanitation systems in American homes has been the work of two generations of engineers, designers and manufacturers. Popular taste has kept pace with this creative progress.

Crane service in this specialized field is comprehensive. It supplies complete appointments for the simplest or the most finished bathroom, kitchen or laundry. It also provides the equally important valves, fittings and piping on whose efficiency the comfort and smooth operation of the home depend.

Crane branches, offices and display rooms in all sections of the country make this service prompt and convenient and render easy and certain the selection of equipment and accessories exactly adapted to your needs and your individual desires.

he said, 'All right! If you have that much confidence in yourself, I have enough confidence in you to recommend you for the position.'

"I wrote my application and my friend did recommend me. The director of the Conservatory was to be in Chicago in two weeks. I spent the interval raising a mustache, so that he wouldn't think I was a mere boy. And I got the appointment.

"I went to Kansas City on a salary of fifty dollars a week—which was more than I had ever before earned. The conservatory charged pupils one dollar a lesson; and sometimes I gave as many as eighty-five lessons a week. That was about fourteen lessons a day, six days in the week. After teaching all day long, until six o'clock, I would snatch a hurried meal, then practice until midnight.

"The second year I was there I persuaded the board to raise the fee to two dollars a lesson. It is never right to continue to sell goods for less than they are actually worth; and I knew our 'goods' were worth more than we were getting for them.

"I also convinced the heads of the school that it would be to its advantage if I appeared in public recitals. Art is no exception to the rule that advertising is necessary, if the public is to see and appreciate what kind of 'goods' you have to sell.

"My immediate object was to become known in and around Kansas City; because that was the field from which the conservatory drew its students. So I began to give local recitals. You probably will laugh"—and he laughed himself,— "when I tell you that while I was working on a program for a recital I used to try the pieces on the janitor.

"**Y**OU see, I felt this way about it, and, what is more, I still feel the same way: I had two things to accomplish: First, my execution must be technically good. The janitor was not qualified to judge me on this point, but I didn't need him for that anyway. I was my own severest critic in regard to technique. But the other thing I had to do was to *interpret* the music; get its message across to the audience. I do not care how mechanically perfect a man's execution may be, if his playing leaves his hearers cold, if he has not made them feel the meaning and the beauty of it all, then he is not a great musician.

"He does not have to choose between playing to the critics and playing to the crowd. He must, of course, have a mastery of technique. But the humblest listener, who doesn't know one note from another, can be made to feel the beauty of music.

"That is why I tried my pieces on the janitor. I could take care of the technique myself; but I wanted to know whether I could make music that would reach and satisfy others. He wasn't easily satisfied either! I can assure you that I felt as happy as if I had received the plaudits of the multitude when he would say, in his blunt fashion:

"Well, Mr. Boguslawski, you done that fine to-night, I like it!"

"For several years, I went on building up a local reputation. Then I thought the time had come to meet the acid test of a New York hearing. This city is the great clearing-house of musical opinion. The critics hear probably ten times as much

## Beautiful FIBERLOID Gift Ware

Your gift will be doubly appreciated if it is made of Fiberloid. For many years this wonderful material has been used for making ivory toilet articles, jewelry, tortoise eye glass frames, fountain pens, gift goods, and many things of every day use.

Fiberloid has become popular for gifts because of its lasting beauty. It retains its brilliant lustre, and will not crack or dent. So dealers will tell you that "Made of Fiberloid" means an additional value to your gift like the word *Sterling* on silver.

You can buy toilet articles of Fiberloid in the standard Fairfax, Rosemont, Berkshire and Avondale patterns. This beautiful Fiberloid material in the colors of ivory, tortoise, gold and amber can be easily engraved and made intimate with monograms of contrasting enamels.

### CRAFT ASSORTMENT

Fiberloid is so ideal for craft workers' use, that we have put up a special assortment of ivory, tortoise, amber and other colors, with full directions, patterns and cement, enough to make many pieces of jewelry and novelties, which is sent postpaid for \$3.00. Satisfaction guaranteed.

Look for the Topkis label

good music as anyone else in this country. They are almost fed up on it. Even if I should give a recital here, I didn't know whether the leading critics would come to hear me. But I determined to try it, at any rate.

"It costs a lot of money to hire Carnegie or Aeolian Hall, much more than I had saved at that time. But thanks to the late Mr. W. R. Nelson, of the Kansas City 'Star,' the matter was arranged, and my wife and I came on. I was so frightened by the ordeal ahead of me that I was sick in bed for twenty-four hours before the recital. When I reached the hall I was so white that even the stage attendant was moved to pity.

"Don't take it so hard, sir!" he said, patting me on the shoulder as if I had been a scared child. "Why, the last time Mr. Paderewski played here, he was so nervous that his friends had to take him and shove him onto the stage! You'll be all right when you get out there."

Evidently the attendant was a good prophet; for I have seen the notices which appeared in the New York papers the next day, and they must have brought intense happiness to the young musical Lochinvar who had come out of the West. The great critics did go to hear him; and Boguslawski returned to Kansas City carrying the laurels of a well-earned success.

He stayed there several years longer. Busoni, one of the most famous pianists in the world, gave a recital in Kansas City during that time, heard Boguslawski play, and begged him to go back to Europe with him and study with him.

"IN ONE way, that was a temptation," said Boguslawski to me. "I had the greatest admiration for Busoni. But I felt that I wanted to stay in America; that, such a I was, I was the product of America. So I decided to keep on as I had begun. After a while, the offer came of a professorship in the Chicago Musical College, one of the leading musical conservatories of this country. I took it. I am associated there with men like Felix Borowski, Percy Grainger, and Leopold Auer, the most famous violin teacher in the world.

"Chicago and the entire Middle West are a wonderful field for the musician. From Minneapolis to St. Louis, and from Detroit to Denver, a great musical awakening is going on. It is a wonderful thing to have a part in this. As a boy I used to dream of personal recognition. That has come; and of course it is very gratifying. But I am sincere when I say that if I had to choose between personal success as a soloist and helping to make music a part of countless other people's lives, I should choose the latter.

"For instance, I love to teach. I really do. People have an idea that a musician teaches under protest; that he does it simply for his bread and butter. My teaching brings me not only the necessities but all the luxuries I have any real use for. But it brings me far more than that. Every new pupil is just one more opportunity for me to enrich people's lives. For that is what an appreciation of good music does; and if the student gains nothing else from his study, he does gain this appreciation.

"I suppose there are hundreds of thousands of men and women who took piano lessons when they were children and who

# SUPPOSE that *all* the General Motors Trucks—

**S**UPPOSE some day that *all* the trucks which General Motors has built were to be driven past your door.

From dawn to dark and into the night the steady movement would carry on, *a stately procession of burden bearers, more than two hundred and fifty miles long.*

What a picture of the scope and variety of American life their cargoes would reveal!

THERE would be great iron pipes for the oil fields, and shaggy logs from the woods; there would be meat and fruit and building materials; furniture on its way from old homes to new; and children in busses, bound for school.

Railroad men measure transportation in ton miles—the movement of one ton one mile. Taking a hundred miles as a fair day's run, the GMC Trucks in service have a daily capacity of 5,869,000 ton miles, which means that they could carry for one mile, in one day:

The annual wheat crop of Kansas—  
*plus* material enough to build two Woolworth Buildings,  
*plus* food enough to furnish breakfast, dinner and supper for four cities as big as Detroit,  
*plus* coal enough to warm the homes of Boston all winter.

Friend of the farmer whose time and produce it saves; friend of the city dweller whose living costs it reduces;

friend of the railroad whose less profitable business it assumes, and whose terminal congestion it relieves, the motor truck has only *begun* the work it is destined to do.

Every year the demand for its service increases, and the widespread resources of General Motors are a distinct advantage in helping to meet this demand. The same sort of engineering talent which has given Cadillac its reputation for craftsmanship, the same factory facilities which enable Chevrolet to pack so much value into its product—these are equally available in the building of GMC Trucks.

And at Dayton, Ohio, the General Motors Research Corporation—the largest automotive laboratory in the world—is a permanent pledge that GMC Trucks will not merely profit from progress in the industry but will steadily contribute to that progress as well.

Either side of Beaver Wall Board may be used. The Red Beaver border appears upon the margin of one side only. It is entirely hidden by the decorative molding when applied.

Write for a free copy of the new BEAVER PLAN BOOK which tells all about Beaver Wall Board and its uses.

# BEAVER

## WALL BOARD

# Look for the "RED BEAVER BORDER"

*It is the sure way of  
knowing the genuine Beaver Wall Board*

Many people who contemplate building, remodeling or repairing, ask us how they can be certain of getting the **GENUINE** Beaver Wall Board.

There is a sure way to tell.

From this date on, every panel of genuine Beaver Wall Board will bear a distinctive Red Border containing the Beaver Trade Mark. Note illustration to the left.

This Red Beaver Border is your assurance that you are getting the Genuine Beaver Wall Board, and the following exclusive advantages:

**1. VIRGIN SPRUCE FIBRE.** Has been proved the best for wall board construction because it combines lightness with great strength. Beaver Wall Board is made of **ALL VIRGIN SPRUCE FIBRE** through and through. An expert can tell this by cutting a piece of Beaver Wall Board and noting that the creamy, spruce color **RUNS CLEAR THROUGH** from front to back.

**2. POSITIVE INSULATION.** Due to the use of long, *virgin spruce fibre*, Beaver Wall Board is filled with millions of microscopic voids or dead air pockets. And building engineers will tell you that dead air is one of the most powerful non-conductors of heat, cold and sound.

**3. 26-LAYER CONSTRUCTION.** Laminating several layers of wood together is widely practiced as a means of overcoming warping and buckling. Beaver Wall Board is made up of **26 LAYERS** of Virgin Spruce Fibre pressed and laminated into one perfect panel. This is another reason for its pronounced durability.

**4. Genuine** Beaver Wall Board is kiln dried and seasoned before leaving the factory.

**5. PATENTED SEALTITE FORMULA.** Genuine Beaver Wall Board is rendered practically impervious to moisture or climatic changes by our exclusive, patented **SEALTITE FORMULA**.

**6. THE BEAUTIFUL ART MAT SURFACE.** Genuine Beaver Wall Board is especially calendered and primed to produce our Art Mat Surface. No sizing is necessary. *Either side may be used.*

Beaver Wall Board comes in 32 and 48 inches wide and in lengths of six to sixteen feet. Saws like lumber. Nails directly to studding or over old plaster walls or ceilings. There is no waiting for damp walls to dry. There is no muss or dirt. Decorating may be done immediately.

Beaver walls and ceilings are permanent—proof against shocks, vibrations, heat, cold and moisture, and are fire-resisting.

The cost of applying Beaver Wall Board is surprisingly low.

**See Your Lumber or Building Material Dealer and Carpenter**

The best lumber and building material dealers in all localities sell genuine Beaver Wall Board or can easily get it for you. Your carpenter can figure costs and apply it for you.

Upon request we will gladly send you a copy of the Beaver Plan Book which tells all about Beaver Wall Board and its uses.

## Painful Burns and Cuts

**Unguentine stops the hurting—starts the healing**

**H**OW many little accidents happen in the kitchen! You know them. Sometimes to little fingers—more often to mother's or the cook's.

A stove burn or hot water scald today—a knife cut or a gash from a can tomorrow.

How they hurt! And sometimes how *slowly* they heal—if you don't know what to put on.

Do this: Keep a tube of Unguentine—"a friend in need"—in the kitchen. At the next accident put Unguentine on the throbbing burn or cut—bandage it cleanly and in a few moments it feels so much better. Soon the injury will be well and you, too, will have learned the great value of this "friend in need."

For thirty-one years Unguentine has been relieving and healing burns, scalds, cuts, bruises, windburn, sunburn, frostbite, chapping and irritations.

For its purposes it is unsurpassed.

Get a tube from your druggist's—he knows what Unguentine will do.

almost never touch a piano now. But that does not prove that the time and money spent on their lessons were wasted. I feel confident that the audiences at all the best concerts and recitals are composed very largely of these people.

"They will tell you apologetically that they haven't 'kept up' their music. But they *have* kept it up! You don't have to play a piece of music yourself in order to, I might say, possess it. If you enjoy and appreciate it when someone else plays it, then it is yours in the highest sense."

"But do they get this appreciation even though they have no great talent themselves?" I asked.

"Yes, they do," was the earnest reply. "Talent is rare."

Boguslawski stopped, thought a moment, then shook his head.

"That is not true," he went on. "Talent is *not* rare. It is less rare than it used to be. In fact, it is not uncommon. The thing that is rare is the force that makes it possible to *develop* talent to its highest possibility. If you ask me what is the one thing I look for in a pupil, the one sign that tells me the boy or the girl will achieve something worth while I can answer you immediately: It is the *will*. I would rather have a pupil with just an average degree of talent, but with a supreme and unshakable will to conquer by hard work, than to have a brilliant, but careless and indolent genius.

"I THINK I am safe in saying that some of the most distinguished musicians are not geniuses at all. They have become great by pure force of will. I have one pupil, a little boy of eight, who is almost certain to achieve something far beyond the ordinary. Not because his talent is remarkable, for it is not. Sometimes he seems almost dull. He is timid and lacks personality. He speaks so low that I have to bend my head to catch what he says."

"But the child has the *will* to conquer. He just stubbornly goes at the job as if it were his only concern in life. He practices four hours a day. Not because anybody else makes him; but of his own will! He will succeed. He will do it by main force—but *he will do it*. And that is the quality I look for. It is what I would look for if I were sizing up people for any other kind of a career. Give me the person with the *will* to do and to achieve, and you may take all the brilliant ones who think they have genius, and therefore can succeed without any particular effort."

"I have found that girls possess more talent than boys. By 'talent' I mean natural ability. They also learn more quickly and they work more conscientiously."

"With these points in their favor, you would naturally expect that they would reach a higher goal—but they don't! Not as pianists, at any rate. Even the greatest women pianists cannot be put on the same level as the greatest among the men."

"I think I can explain this. Here is one significant detail: Women play too fast! That doesn't sound important; but the explanation of it is *very* important. Men have a sort of *patience* which women lack. They can 'bide their time' better than women can."

"Suppose a man and a woman play the same composition, perhaps a long and in-

*"Buy one Royal Cord—  
try it on the right hind  
wheel"*

## How it feels to be the leader of the tire business

**T**HERE was a time when the bigger a business grew the more "uppish" it got.

These days are over—praise be!

The makers of Royal Cords are the leaders of the industry, but they don't feel it any loss of dignity to reach out for new friends.

And they take the very simple way of just asking you to try one Royal Cord. All the U. S. Royal Cord policies are simple.

For instance, Royal Cords have never talked about exceptional mileages. There are hundreds of testimonial letters in the files but they might sound extravagant and misleading to people and that is not a good thing.

Yet the makers of Royal Cords believe that Royals deliver the greatest average mileage of any tire that was ever made. This seems to be proven by the confidence car owners have in these tires.

Royal Cords have never been sold at "big discounts" or featured in "sales". People can't tell what a tire is actually worth if it sells for all kinds of prices in different sections of the country.

The support Royal Cords are getting today from so many new users is the outcome of people feeling confidence and trusting the Royal Cord makers.

When you put Royal Cords on your car you are going to be satisfied. You will see what a good, clean money's worth they are.

## United States Tires are Good Tires

tricate one. The woman plays it with a great rush of feeling. She is swept forward by her emotions. She is in their power—they are not in *her* power. But the man will not be hurried; he builds up his effects with undeviating design; he has his emotions, but he keeps them in their place, so to speak.

"His is the patience of conscious purpose and conscious power. 'I know what I want to do,' he seems to say; 'but I will take my time in the doing.' So his grasp is more deliberate, and therefore stronger. The woman wants to show you everything in almost feverish haste. The result is that she may stir your emotions, but she won't give you the impression of mastery and controlled ability which the man conveys.

"However, when it comes to appreciation of music I think the women are superior to the men. I am speaking now of the average audience, not of exceptional cases. The average man wants 'fireworks' in his music; something like the 'Rakoczy March' for example. He likes brilliant effects; the obvious in extremes. Women have a much subtler perception. They appreciate the finer shades, both in meaning and in execution.

"Possibly this is because of the very thing we were speaking of just now. A great many more girls than boys receive piano lessons. And perhaps this explains why more women than men appreciate good music. Those early lessons were not thrown away. The few hundred dollars which their parents invested in lessons years ago are paying dividends now in a pleasure and a satisfaction which I do not think would otherwise have been possible. The little girls who are practicing their exercises to-day will largely make up the music-loving audiences of twenty or thirty years from now."

## The Vortex

(Continued from page 40)

speed, was not surprised to find a light gleaming in Blunt's cabin as he approached. When the klooch admitted him he saw that she had been crying. For causing her grief he would have enjoyed ripping deeply into Blunt with his keen knife, but at school he had been taught obedience to the white man's laws, strange as they were.

"He hurt you?" he demanded, without even the formality of a greeting.

"A wound of the heart, not the body!" she replied dully.

"A deeper wound and more lasting!" he commented grimly. "But he sails with the fleet; then it will be over."

"No!" she cried. "He must not sail! He must stay with me and the little one who will come with the snows of January. He cannot go now. Go for me to the commissioner and lay it before him—he is just!"

Kululak shook his head slowly. "It is not best. He is determined. Better the commissioners and marshals were not here to force him, because, for fear of them, he plans to slay you as I would the caribou. Alive, you can cause him much trouble, but the dead neither speak nor lift a hand."

A look of wonderment, sorrow, and fear came into her eyes. "He would kill me," she faltered, "kill me and the little one who is to come?"

Kululak told what had passed between Blunt and Cultus Jim. "It was thus spoken!" he concluded. "I shall watch over you as never before." Her eyes softened at his loyalty; then, as her thoughts returned to Blunt, the fire in her dark eyes burned with hate. "Remember," warned Kululak, as he departed, "you must not go to sea with Blunt."

She did not answer. Love was fighting to thrust aside hate. With this conflict came doubt. Perhaps, after all, Kululak was mistaken.

Shortly after noon Blunt returned, not as the klooch expected, reeling from white mule, surly and brutal, but clear-eyed, smiling. Awkwardly he thrust a bag of candy toward her. She accepted it, watching him closely.

"You're pretty good klooch," he whispered, and kissed her. "Guess I'll stay this winter after all."

Then she knew that Kululak spoke the truth. Behind this sudden kindness, calculated to disarm suspicion, she saw plainly the sinister motive.

**THAT** night and the next Kululak slept beneath an overturned dory, not a dozen yards from the cabin. To his listening ears came Blunt's voice. "Klooch, the big boss wants more fish. We'll go out to-morrow."

She objected, but Blunt insisted, and then, to the listening man's amazement, the klooch agreed. Kululak slept soundly the remainder of the night, but with the coming of dawn he grounded his motor dory on the beach and stepped out with the air of one who has been far away.

"Hello, Blunt!" he said in his school English, "fish to-day? Sure! Need the money, huh?"

"The klooch and I are goin' out," replied Blunt carelessly. "We won't need you this time; maybe next, though!"

Kululak cocked a critical eye at the weather. A stiff offshore breeze was blowing. "All right!" he replied reluctantly; "come back to-morrow!" When Blunt carried some gear to the gas-boat, Kululak hurried to the cabin. "You're going?" She nodded. "No! No!" he begged, "this is the day he's waited for."

"And my day!" she replied calmly. "He shall remain here! I'll keep him! Not for me, but for the little one who comes with the January snow. He will be here even when the little one is bent with age. And now, go!"

Kululak obeyed reluctantly.

There are places along the shore of the Bering Sea where the tide sometimes goes out beyond the horizon, leaving a vast expanse of sand bars, quicksands, and mud flats, intersected here and there with sloughs of sluggish water. In its lazy moods the tide returns, one wave after another, each rolling over the flats until it is gradually spent on the vast expanse of sand and mud; yet each advancing wave claims and holds a portion of the waste. At full tide the waves again lap the tundraed shores.

Again, the tide returns in angry mood—an offshore wind whips back the waters and holds them in check until, at last, as if infuriated at the interference, the sea

## Wide Acclaim Hails Plus Value

THE new Overland has achieved everywhere the greatest success of its career. Enthusiastic public approval substantiates our sober belief that Overland—at its record low price—is the greatest automobile value in the world today.

The body of the touring car is *entirely of steel*, beautifully finished in hard-baked enamel. The hood is higher. Body lines are longer. Tires are *first-quality*

Fisk oversize. Seats are lower, and deeply cushioned. And Triplex Springs (*patented*) give Overland smooth riding qualities equal to cars of much longer wheelbase.

The powerful Overland motor gives faithful performance with remarkable economy—twenty-five and more miles to the gallon of gasoline.

Examine this new Overland—drive it—and realize its superlative excellence.

*AT PYTCHLEY HUNT\**

"Well, Archie, I see you've been buying some new tyres."

"New tyres? Not at all, Sir. I've driven those Kelly Cords steadily for nearly a year now."

**T**HAT Kelly Kant-Slip Cord tires retain the appearance of newness for an astonishingly long time is, of course, a source of pride to the owner. But this is as nothing when compared to the satisfaction derived from the long, economical mileage they deliver and the sense of safety given him by "the tread that removes the dread of skidding." It costs *no more* to buy a Kelly.

\*Drawing by Laurence Fellows, London.

risers up in its might and rushes inland in a mighty overwhelming wave known as "the Bore." An irresistible deluge, becoming a vortex as it hurls itself against the uplifted land, the Bore is feared alike by man and beast. The thunder and roar of its voice can be heard before it is seen. This is one place where sometimes the tide is late; where it waits, momentarily, not for man, but another force of nature—the wind.

Blunt had often watched the onrushing of the Bore and its latent power had never failed to fill him with a mixture of fascination and dread. Sometime to-day there would be a Bore, he knew. The wind was already whipping the shallow waters of the flats. But to-day he did not fear it. His plans would take the gas-boat far to sea, safe from Bores and sand bars.

With a final glance about the cabin, Blunt shouldered food and a small breaker of water, and ordered the klooch to follow. Quietly she donned warm clothing and followed him aboard. As usual, and because she alone knew the hidden dangers of slack water, she took the wheel. Her strong little hands gripped the spokes and sent the craft through safe channels as the powerful motor drove it ahead. Blunt was engineer, a duty having the advantage of warmth on blustery days.

The miles slipped astern rapidly. From time to time the klooch changed her course, maneuvering in a way that would have alarmed Blunt had he been above deck to observe. Once she heard him coming, but a quick twist of the wheel sent the craft on another course. He glanced along the horizon, saw no other craft, then went below.

**P**RESENTLY the klooch lashed the wheel and descended to the engine-room. Love may have urged her to go down hoping that fate would intervene; that something to change the course of things the last moment might appear. "You like baby come?" she whispered, her eyes alternately hopeful and glittering.

His grimy hands caressed her, yet a strange trembling of his fingers as they touched her throat whispered a warning. "Sure, Klooch," he said, "now you run back to the wheel before we run onto a bar." Outwardly at least she was as submissive as ever as she obeyed his command. He looked at his fingers curiously. "She was never nearer death than just then," he muttered.

The blue haze of the engine-room was stirred by a vagrant draft: a small grease-coated port light opened and the klooch's dark eyes peered down upon him. Then the port was closed again.

With soft steps she made her way astern, and slashed the tow line of the dories, setting them adrift. Amidships she paused and cut the lashings of the *bidarka*, a light skin boat completely decked over save for a round hole for the paddler. Then she returned to the wheel.

Dead ahead, a matter of yards, the water whitened above a hidden bar. Her practiced eye calculated the distance, the pull of the tide and speed of the boat. With a final twist of the wheel, she slipped the lashing in place, stepped quickly to the *bidarka*, and with the full strength of her young body lifted it clear of the deck, and silently lowered it into the water. It pitched and tossed as it skimmed over the

# Great News for Shavers from Williams

## The New Doublecap Stick

### Doublecap more convenient

Take hold of the stick you now use. Then take hold of Doublecap—its new convenience is striking. Here for the first time is a shaving stick that gives you a full, whole-handed hold, even when the stick is worn down.

### Doublecap more sanitary

Doublecap is protected by a quickly removed sanitary fibre wrapper—a departure from the old-fashioned troublesome tin foil; then further protected by a special wrapping, hermetically sealed. Around the center of the stick is a threaded metal ring, to each side of which a cap is screwed. While you are using one end of the stick, the other end is protected from exposure.

### Doublecap 100% economical

This is the Re-load. Doublecap Re-loads cost less than the original Doublecap package.

Months hence, when you have finally used up the original stick, remove the thin wafer of soap remaining within the metal ring. Just push it out with your finger and stick it on the top of a Doublecap Re-load.

**N**OW you can get Williams' famous Shaving Stick in a really perfect holder; a holder that gives you not a mere finger-tip hold, but a firm, full-hand hold.

The new Doublecap Stick has the same magic-like power of all Williams' Sticks, to make your shave pleasant, more comfortable, quicker. It gives the same thick, busy lather. It has the same toning effect on the skin. And, quite as important for an easier shave, you can get a big man-sized hold on it.

Even the small free trial size of this Williams' Doublecap Stick proves its new convenience. Every shaver, certainly every stick user, should get this proof. Send postal or use coupon below—now.

surface, despite her steadying hand.

The gas-boat grounded with a violent shock. Blunt was sent sprawling. He crawled to his feet, cursing the klooch for her carelessness, and reversed the engine. The laboring craft vibrated and tossed in a futile effort to work free. Blunt stopped the engine and hurried up on deck. His enraged face became ashen as he realized what had happened. With the skill that only a native can acquire in the handling of skin craft the girl was skimming over the water. The tiny *bidarka* was awash most of the time, but the unwavering rise and fall of her paddle was comparable to well-oiled machinery. Blunt cupped his hands and bawled at her; then he whined his pleas with no better success.

Unless some other craft came to his rescue he was helpless. About the boat's hull the water gurgled like the current of a sluggish river. He watched it with silent horror, felt the craft heel slightly as the depth of water no longer lent its support; then ahead sand became visible where a few minutes before all had been water. In the distance the low shore was barely visible. Soon, as far as he could see in every direction, there would be only the bars, mud flats, slack water and sloughs of the great bay. Then the tide would return—an onrushing wall of water, sweeping everything before it! The launch would be battered down and smothered. "And what of me?" he repeated, "What of me?" Less chance for him than for the launch, and he knew it, unless—his frightened eyes sought the shore; then he removed his clothes to the last stitch. "A strong man might do it," he reflected, "and I'm a strong man."

HE LEAPED over the side, cursing the chill of the water. It was knee-deep where he stood, and deeper on toward the shore. He rushed about the sand bar cursing his plight. A thousand devils of doubt rushed in to torment and jeer at his helplessness. An hour of inactivity passed, tortured his very soul. Then the last of the water trickled off into sloughs and low lakes. He began the frantic race for shore.

From the first he commenced to run, splashing across shallows, stumbling through mud, calling upon his great strength to the utmost. A slough barred his path, and he unhesitatingly plunged into the icy water and swam its breadth. Quicksands in patches and sticky mud across which he could neither swim or walk blocked his path at intervals. Detours around these obstacles cut deep into his strength and the precious minutes remaining. "Give me a chance! Give me a chance!" he screamed, the torment of fear clutching deeper with each new obstacle.

He plunged into a small lake, swimming desperately, then as its icy waters chilled him, he suddenly turned and swam back, urged on by the horror of cramps. The effort had cost him dear in strength. He stumbled as he reached the land, but fear of the Bore drove his exhausted body toward the distant shore.

"I'll make it! I'll make it!" he screamed, half insane with joy. "Give me strength to make it; to get my fingers on that klooch's throat; give me revenge, and I'll die happy."

Something was crashing in his ears with the violence of thunder. He stirred slowly and raised himself from where he had fallen.

# Willard Has Both

As good a wood-insulated battery as can be made and  
the only battery with Threaded Rubber Insulation

Since the beginning of electric starting and lighting, wood-insulated Willards have been tested and approved by millions of motorists. They sell at prices within reach of any car owner and are made in sizes and capacities for all makes of cars. There is no better "buy" in a wood-insulated battery, but it will pay any car-owner to seriously consider the superior merits of Threaded Rubber Insulation.

Car owners buy this better battery not only for greater assurance against repairs, but also because Threaded Rubber lessens the danger from overheating in summer and of freezing or exhaustion in winter. Its uniform porosity also assures a definite increase in vim and punch to start a stiff motor. Winter days now seem far off but don't forget that they'll come again!

# Take your store to the places where farm folks gather

Month after month, in these advertisements, *Farm & Fireside*, The National Farm Magazine, has emphasized to retail merchants this thought—that you can increase your sales to farmers by bringing your merchandise to the attention of more farm people.

We have shown in one of these advertisements, for instance, how the Ottawa Farm Machinery Company of Ottawa, Illinois, not content with waiting for farmers to come to them, took their line of McCormick-Deering farm equipment (as advertised in *Farm & Fireside*) direct to farmers. As a result, their annual sales were increased 25 to 50 per cent.

We have cited other instances. How a hardware merchant increased his sales of Devco Paints (as advertised in *Farm & Fireside*) 75 per cent in a single week! How an Arkansas merchant doubled his weekly sales by bringing his *Farm & Fireside*-advertised merchandise to the attention of more people! How a furniture merchant trebled his sales of Hartshorn Shade Rollers (as advertised in *Farm & Fireside*)!

## Why farm sales increased

In every case, the sales of these merchants increased in direct proportion to the number of people to whom the merchandise was shown. In every case, they found a receptive audience—an audience composed largely of farm families who already were interested in the products shown as a result of long-continued advertising in *Farm & Fireside*.

To increase farm trade, take your store to the places where farm folks gather. During the next few months there will be a number of such opportunities—county and district fairs, farmers' institutes and agricultural short courses, farm auctions, bazaars and com-

munity gatherings—opportunities, all of them, to show merchandise, and to make sales, to a greater number of people.

"We always have a booth at our county fair," an Iowa merchant reports. "We display only plain, honest merchandise that every farmer knows about—such merchandise as you folks advertise in *Farm & Fire-*

side. And we find that, year after year, farmers are interested in seeing and examining the products with which they have become acquainted through advertising."

Try a booth at your county fair this year. Plan special sales for days when farmers' meetings are held in your town. Exhibit your goods, when possible, at farmers' institutes. Arrange with your local auctioneer, if you handle any of the more expensive articles in the list below, to auction off one brand new article at each farm sale.

Emphasize, in your talks with farm families and in your printed announcements, that the products you are showing are advertised in *Farm & Fireside*. By doing this you are reaching out to hundreds of the more prosperous farm families in your community—farmers who look upon *Farm & Fireside* as their guide to better farm methods, better farm living, better farm merchandise.

## Send for this free book

Hundreds of merchants are increasing sales, increasing their number of customers, by taking their merchandise direct to the farm homes. We have compiled a number of these experiences into an interesting booklet, "Projected Selling," a copy of which will be sent free to any merchant who requests it.

Learn the facts about Projected Selling—the new method of increasing farm trade. Just write us on your letterhead, "Send me 'Projected Selling,'" and your copy will go to you by return mail.

en face down in the mud. Over the flats, louder than the dismal wind, came a new sound. A low, distant roar, at first faint, then louder, then dying away.

"The Bore! The Bore!" he screamed. Ahead, the flats were smooth and hard. He still had his chance, and as he fled again toward the shore line and safety, the thudding of his naked feet on the sand, the pounding of his heart and gasping of his lungs drowned even the voice of the Bore.

A half-mile he ran, a half-mile that took heavy toll of his dwindling reserve of strength. Then he stopped abruptly. The devil himself, toying with a lost soul, could not have spread a more entangling web than the spread of mud and slime at his feet. The roar of the Bore was louder, steady, dominating even the terrified drumming of Blunt's heart. He turned and saw the mighty onrush, miles in width, its seething crest standing out white against the leaden horizon; saw it smother bars, fill pools and sloughs, yet always seeming to increase rather than diminish.

The instinct of self-preservation shook off the spell, and he turned and fled once more, his feet sinking deeper and deeper into the slime, until, with a despairing scream, he sank to his knees. The dilated eyes told of reason gone. From the lips that had dripped oaths in the hour of his extremity, now came a strange gibbering—and then laughter; a shrill, weird laugh that matched the grin of mania on his face; a laugh that would have congealed the blood had anyone been there to hear.

And the Bore, its roar triumphing even over the wind, thrust out a tongue of white water toward this object in the slime; it hissed menacingly, and then, smothered the creature's laughter with its tumbling crest. An arm, strong, white and clean, gleamed an instant in the backwash of the gigantic vortex, then vanished. The Bore rushed on!

THE klooch stirred uneasily and shivered. Slowly she opened her eyes. The tundra beneath her was wet from her clothing. Near by, well above high water mark, was the *bidarka*. She passed her hand wearily over her eyes as if to sweep away the horror of the last few hours, the frantic effort that had been required to paddle to safety, skimming this slough and that, working up channels and carrying the *bidarka* over bars.

Her eyes turned seaward. The black waters of the Bering Sea covered the flats now; small swells, oily and restless, rose and fell. "Always," she whispered, "he will be here, always for the little one who comes with the January snows."

From over the waters came the steady "pop! pop! pop!" of a marine motor. Presently it stopped and a dory grated on the beach. Kululak splashed ashore and found her. Tenderly he gathered her up and carried her to the dory, where he wrapped her in blankets and poured hot tea between her lips.

"*Alki nesika tenas . . .*" she murmured.

"Sure thing!" he blurted in cannery American, patting her soft cheek gently. "To-morrow we see preacher, huh? Sure Mikel!" At this point Kululak's cannery slang failed him. He had a picture to portray and he painted it with the glowing colors of his own dialect. He talked of a long, long trail, flowered with happiness and free from the barriers of race.

# Blame Yourself

## If This Message Doesn't Bring You A Big Salary Increase

Take any ten average men who are in blind alley jobs at low pay. Analyze each case without prejudice. You'll find that every one of them is solely and entirely to blame for his poor earning power. Every one of them has had a golden opportunity. They either have failed to recognize it, or, recognizing it, lacked the courage to follow it up. But now comes your chance. If this page doesn't bring you a big increase in salary—quick—you have no one to blame but yourself.

By J. E. Greenslade

LET'S be specific. What do you want in life? You want more money than you're getting. You want your own home, a car, membership in a good club, you want to wear good clothes, educate your children and put away enough money to make you independent. If you are like other men, you want to be your own boss in a position that grows every day in interesting fascination. You want to travel, see the world, and meet the wide-awake people who are doing things.

All right. I'll tell you a quick, easy way to accomplish all this. If you don't take it you are the only loser. You are the only one who will have to face the accusing finger of the man you might have been. If you do take it, you'll thank me the rest of your life for putting this information in your hands. For now it is possible for you to quickly enjoy bigger earnings, and have all the joys in life that your bigger self demands. If this was a guess I couldn't print it. I know it to be a certainty. It is proved by the cases of thousands of other men who have done exactly the same thing. Listen.

### What It Brought These Men

Charles Beery, a farm hand of Winterset, Iowa, was offered this chance. He took it and jumped from \$18 a week to a position paying him \$1,000 the very first month. J. P. Overstreet, Denison, Texas, was on the Capitol Police Force at less than \$1,000 a year. He wasn't content with a bare living and he jumped to an income of \$1,800 in six weeks. F. Wynn, of Portland, Oregon, an ex-service man, wanted the joy of a real success. He earned \$544 in one week. George W. Kearns, working on a ranch for \$60 a month, took the quick road I offer you and in two weeks he earned \$524. Warren Hartle of Chicago was a railway mail clerk for ten years—in as deep a rut at as low an income as any man could stand. But he wanted success, he longed for the good things of life that he saw other men having. He took my advice and earned over \$7,000 the first year.

### The Secret Is Yours

But, of course, you want to know how it's done. I'll tell you. Although none of these men had ever sold a thing in their lives—though many believed that a salesman must be "born" a salesman—we took them, without experience or training of any kind, and in a short period of time made Master Salesmen of them. Then our Employment Department

helped them to select the right position and they were off with a boom to the success they had dreamed of.

The National Salesmen's Training Association can do exactly this for you. If this big organization of Master Salesmen and Sales Managers had raised the salaries of only a few men, then you might call it luck. But we've been doing it for fifteen years, day in and day out. Today we're so accustomed to the amazing increases in salary our members receive that we take them as a matter of course.

There is only one thing I ask of you in return for this offer. Don't let the idea of a big salary, the thought of traveling all around the country and meeting worth-while people, make you think that the job is beyond you. Keep an open, unprejudiced mind on this subject—at least until you have seen the remarkable book that I want to send you without charge.

### Read This Free Book

This book, "Modern Salesmanship," explains why thousands have quickly succeeded in the selling field—how it is easy to make big money once you are in possession of the Secrets of Selling—how you can quickly get these fundamental secrets, apply them and achieve a quick and permanent success. This is the book I will send you, absolutely free of obligation and expense. Read it through and then decide for yourself.

But remember this one thing: This is your opportunity. If you don't realize a big salary increase from this message, you have no one to blame but yourself. Send me the coupon before you turn this page and I'll send "Modern Salesmanship" immediately.

National Salesmen's Training Association  
Dept. 23-E, Chicago, Illinois

National Salesmen's Training Association  
Dept. 23-E, Chicago, Illinois

I am willing to investigate the opportunity you offer without cost to myself. Please mail me Free Proof that I can become a Master Salesman and qualify for a good sales position. Also send me your illustrated book, "Modern Salesmanship," and particulars of membership in your Association and its Free Employment Service. This is all free of cost or obligation.

## What I Would Do With a Million Dollars

### FIRST PRIZE

#### Not So Much to the Family—More to Helping Others

**T**HIS morning I woke to find myself heir to a million dollars. The family cannot believe it at first. Are we to have a life of ease after the years of struggle and deprivation?

Son wants a sport car; Daughter wants fine dresses and "inner circle" friends. I hope God will give me the courage to say "No," and to give my boy only enough for a good education and wholesome pleasures and my girl enough to place her on an equal plane with those girls in that class of social life where friends are made through personal worth and not by the gleam of gold. The little wife and mother shall have what she wants—richly does she deserve all that she asks for, and only too small will be her requests.

The burden of debt shall be lifted from the little church, yet the pleasure and need of giving shall in no way be removed from those who meet there for worship.

Many dollars will be used in establishing profitless factories, which will give such work to unemployed in place of charity as will be a benefit to the community and an aid in building up the country. These self-supporting, contented groups of workers will know that their toil is helping their own business, that its proceeds are turned back into their pockets, and that its welfare is their own welfare.

What money is left I will use to build libraries, to pay health instructors, to beautify cities, to help the struggling student, to reward notable achievements, always trying to hold in view the plan that only honest need, desire, or effort on the part of the receiver will merit my interest. I hope that my life, hard but happy, is not going to be spoiled because I am given the trust of a million dollars.

The alarm jangles; I sleepily shut it off, and arise to my work wondering what I would do with a million if it were a reality, not a dream.

H. B.

### SECOND PRIZE

#### She Would Improve Her Small Home Town

**B**EING a government clerk, working seven hours a day, living in Washington and earning a little better than a living may sound "real swell" to the folks back home, and it really is compared with being tied to a kitchen stove and sink ten or fifteen hours a day on a farm, for a mere existence, but my Heart, Home, Relatives, and Friends are in a pretty little village among the hills of New England.

What would I do with a million dollars? Would I dress in beautiful clothes and ride

# OLDSMOBILE

5-Passenger Brougham \$1375

## Oldsmobile Wins by Comparison

Down below the beautiful body of the Oldsmobile Four Brougham is the real reason for the growing tide of Oldsmobile popularity. For here is chassis superiority which is apparent even to the untrained eye.

The frame is stronger—7 inches deep in comparison with the 5½-inch average of other cars of this type. Also the axles, cross members, king bolts and shackle bolts are larger and stronger. And here is the reason for the Four's greater riding comfort—it has a wheelbase of 115 inches instead of the usual 110 inches, and the rear springs are 54 inches long as compared with the 50-inch average of cars in this class.

The Oldsmobile Four valve-in-head engine is built over-size throughout. The piston displacement is 224 cubic inches—the average of cars of this type is 190 cubic inches. This explains the Four's many sweeping victories in hill climbing contests where an engine is bound to reveal its true worth. Yet, with this immense power goes smoothness of operation at low speeds and fuel economy which is amazing. Ask Oldsmobile owners.

In a word, the Oldsmobile Four exceeds every mechanical standard for cars of its class. It offers you greater security, superior comfort, brilliant performance and extra years of satisfying service.

A PRODUCT OF GENERAL MOTORS

Here is the white blackberry. It is one of hundreds of triumphs of the man who made Nature's secrets his secrets. Why not let him work with you in your garden this season—the free book tells how.

## Know What Burbank Knows

**M**ANY an amateur gardener spends years learning what Burbank can tell him in five minutes.

Did you know, for example, that if you plant gladiolus—or almost any other lily bulbs—in the same place for three years, the third year's crop will be a failure?

"Bacterial diseases," says Burbank, "attack plants that are planted year after year in the same place. The remedy is to rotate the crops."

Do you know how to make the bees produce new flowers—how to graft fruit trees—how to turn white flowers blue, and so give a small garden the appearance of a large garden?

Burbank will tell you. You need not envy some rich neighbor his highly paid professional gardener. You can have the greatest gardener who ever lived—Burbank himself.

Send to-day for the useful little pocket volume, "**Half-Hour Experiments with Plants**"

Not only does it contain some of the most useful information from his life work—the eight splendid volumes he has written—but it has been published free for every American gardener—professional or not—who wants to grow better fruits, vegetables and flowers. When you follow its suggestions, you have Burbank working with you!

**P. F. Collier & Son Company**  
416 West 13th Street, New York City

**P. F. Collier & Son Company**  
416 West 13th Street, New York City

Send me by return mail, free of charge, "**Half-Hour Experiments with Plants**;" and at the same time tell me how I can secure, if I wish, the complete eight-volume edition of Burbank's works on small monthly payments.

Name.....

Address.....

Send for the little book to-day.  
This convenient coupon saves  
you the trouble of writing a letter

through Main Street in an expensive car? No indeed! Would I give large sums to Charity and call it enough? No, again.

First, I would go back to the pretty little village and anonymously, if possible, have installed a much-needed water and sewage system for health, convenience, and fire protection. Next I would build a High School, Auditorium, and Community Center for the thirty or forty students who now ride from seven to twenty miles in busses and on trains every day to get an ordinary high-school education. I would have movies, properly conducted dances, and socials in the community center. I would complete the plans for a public Playground, Baseball Park, and Tennis Courts that have been tabled for ten years for lack of funds and the necessity of the "Younger Set" to leave town to find employment.

Donations? Yes, selected; particularly a trust fund for the little struggling country church, and other places where I know it is needed.

Now for a little selfishness, but not too selfish, as I would not care to go alone on a trip to Niagara, Salt Lake, Yellowstone, California, Panama, Rio de Janeiro to the World's Fair, Cuba, Florida, and back home to see how my plans were progressing. With my home remodeled, an automobile, some good books, and all my friends, what more could I ask? Hope the Million is not overspent, I would like a trip abroad.

MISS E. C. B.

### THIRD PRIZE

**What to Do with It? Why, Keep It for My Own Use**

**T**O BE diplomatic, I suppose I should say that if I were to wake up some fair morning the proud possessor of a cool million, I should play "Lady Bountiful," and philanthropically relieve myself of a goodly portion to alleviate suffering.

But as a remote descendant of George Washington, I cannot conscientiously say such. Therefore I'll tell the truth, and as a consequence, talk myself out of the prize.

My friends would expect me to "live up to" so vast a fortune, and I would try to do so. After having purchased an imposing dwelling (such as are seen in movie books), a car for each member of the family, and a few other little things it takes to impress one's neighbors, I'd have about five hundred thousand, or half of it, left. "What would I do with that?" you ask.

I would hang on to it as none but one who had once lived in a shingled bungalow, and had at last achieved her "dream home," and dreaded a reverse again, could hang on. For I would live in a constant, grinding fear of the "money not holding out."

Of course if I did what I *should* do with the million, I would open coal yards in some of the large cities, where all needy people would be allowed to carry away as much as they were able, without the aid of wagons, or any other vehicle. Thus, I would eliminate all but those worthy of charity, for there would be but a scanty number who would carry coal in sacks unless they were in real want.

MRS. V. B.

# \$1.00 A SUIT

## 5 Big HANES Features

- 1 Hanes large, roomy armholes, taped instead of turned under. Can't curl or rip—but a friction-free surface that really wears.
- 2 Hanes webbing belt guaranteed 3-thread elastic webbing instead of single thread, gives more elasticity and greater strength. Specially sewed to prevent tears and rips.
- 3 Hanes closed crotch is cut and stitched in a special way that really keeps it closed. That means added hot-weather comfort.
- 4 Hanes crotch lap buttons sewed on the seam. Won't come off. 4 thicknesses of material instead of customary 2. No patch used.
- 5 Hanes wide, full-length knees cut so as to give greatest freedom without binding or creeping up the leg.

**You've got it all  
in "HANES"  
at \$1.00**

**HANES**  
Full Cut  
ATHLETIC UNION SUITS

**WHAT** we put into "Hanes" Athletic Union Suits for \$1.00 cannot be duplicated anywhere near the price! As manufacturers we know this; you will prove it when you personally understand the comfort, workmanship, material and service that "Hanes" hands out!

Check up "Hanes" in comparison! We tell you "Hanes" is made to meet the world! Examine every detail from the quality of the nainsook down to the four thicknesses of material that holds the crotch lap button! "Hanes" is generously full cut and allows for the hardest work and play. Every strain-point is reinforced!

Put the youngsters in "Hanes" Athletic Union Suits—they give such wonderful service. 2 to 16 years, in sizes 20 to 34.

**HANES GUARANTEE:** We guarantee Hanes Underwear absolutely—every thread, stitch and button. We guarantee to return your money or give you a new garment if any seam breaks.

## Vision

(Continued from page 16)

"There is only one man who fits that description," I said. "You must mean Willard Straight."

"Yes, Willard Straight," he answered. "The other man had all the advantages, apparently; but he never saw beyond his own business and social circle. Straight had Vision."

It was too good an opportunity to be missed. There was the word that eludes definition, and here, sitting in front of the fire, was the man who, probably more than any other American, has seen the word at work.

"I wish you would talk about some of the Men of Vision you have known," I said to him. "And tell me one thing, particularly: Is this mysterious quality something that only one in a million can possess—a gift, like rich parents, or talent for music? Or is it latent in average folks, needing only to be recognized and fostered? How do you discover it in the men you employ? Who was the first man you met who had it in unusual measure?"

**IT WAS** a good fire and the chairs were comfortable. I threw on another log and turned out the lamp. Somehow, firelight seemed appropriate for a talk about Vision. How many men, I wondered, have dreamed dreams and conquered empires in front of an open fire?

"I don't have to hesitate over your last question," Doctor Mott began. "The first man of really great vision whom I knew well was Dwight Lyman Moody. You do not hear his name so frequently these days, for events move fast and even outstanding men are quickly forgotten; but I think I could undertake to guide you to at least a hundred cities in this country and point out some beneficent institution, or influential man, or group of influential men, as living proofs of the vision of D. L. Moody."

"You remember his story. When he was four years old his father died, leaving nine children. The little stony farm was mortgaged and the creditors took everything, even the kindling from the wood pile. Dwight was tossed about from pillar to post, receiving a very meager schooling—he was never a scholar in any sense—until, at the age of seventeen, he was offered a place in a store on condition that he attend church and Sunday-school regularly. The part of Boston where he lived was dense and dirty, filled with ragged youngsters. It was not long until Moody had recruited a corps of them as a Sunday-school class, and in that crowd of rough-talking, hard-hitting young rowdies Moody found his vision. From that day he lost his enthusiasm for making money and became an enthusiast about men. Having saved a thousand dollars, he resigned his job and went to work heart and soul in the mission he had established. You can easily imagine the consternation of his relatives and practical advisers."

"Your thousand dollars will be gone in no time," they exclaimed; as, indeed, it was.

"Never mind," replied Moody. "I am working for God, and He is rich."

"In that faith, backed up by tremendous energy, he set out on his career, which exerted an influence on his generation hardly second to that of any other man.

"You ask me to give a working definition of vision, and I should say in answer that it is the capacity—

To see what others do not see.

To see further than they see.

To see *before* they see.

"The third part of the definition is fully as important as the other two. George W. Perkins had framed in his office a quotation from Roosevelt which ought to be in almost every office: 'Nine tenths of wisdom is being wise *in time*.' A man may be greatly hampered by education or opportunity; he may be able to see only a few inches beyond his competitors. But if he trains himself to keep looking, if he can manage to see those few inches twenty-four hours ahead of the crowd, that is all the advantage he needs.

"Moody had vision of all three sorts. He had a wonderful power of looking into men and seeing possibilities which the world had not discovered, and of which even the possessors were often unconscious. Literally, I never saw him discouraged about any man; there was always something good, something that could be stirred and appealed to. Now, just think for a minute what power that sort of vision gives. The amount that any one of us can accomplish is governed by the tools with which we must work; and those tools, in most instances, are other men. If we go through life suspicious of other men, expecting nothing great of them, prepared for repeated disappointments, we are merely dulling our own tools. Moody expected *much* from every man he met; and the man, rising to meet the expectation, became twice as effective or ten times as effective a tool for Moody's work.

"IN THE same way he had a vision of the cities that he visited. They might be dirty, and sodden, and lacking in pride or spiritual enthusiasm—Moody never saw them so. He saw them transformed by the power of a great ideal and of a great Saviour; he would stand before an audience which had come into the huge hall apathetic and, it might be, unexpectant, and picture to them the possibilities of human life in that city with an audacity that was perfectly sublime. And the audience went out with his vision to make some part of it, at least, come true.

"Finally, he had a vision of money in its power to work for human betterment, and he held that vision up before the men of wealth in such a way that hospitals, city missions, association buildings, colleges, and churches literally blossomed under his touch. One of his biographers tells an incident which is worth quoting:

"He set out one day with a prominent clergyman in Edinburgh to raise money for a mission in that city. The minister, who was known and had access everywhere, went from one home to another, asking for ten pounds or fifteen, and congratulated himself on his success. But Moody was far from happy.

"I saw it was going to take all winter at that gait," he said. "And so (not daring to criticize him), when we came to the next house (that of a very grand and wealthy woman) I said, 'How much are you going to ask her for?'"

"Oh, perhaps fifty pounds."

*Mrs. Gowen, in owner's cabin, writing up the log of the cruise on her Remington Portable.*

*The famous 'Speejack', Mrs. Gowen's motor yacht, now in the hands of the U.S. Navy.*

## Around the world with the 'Speejacks'

THE 35,000-mile cruise of this little 98-foot motor yacht was a thrilling exploit, replete with courage, daring, hardship and adventure.

Lonely tropical islands of the South Seas, off the routes of trade—the East Indies, the Red Sea, the Mediterranean—the empty miles of the Atlantic, were covered by Commodore Gowen and his wife in a wonderful voyage of more than a year.

The log of this amazing cruise was written, from start to finish, by Mrs. Gowen, on a

## Remington Portable Typewriter

Here is Mrs. Gowen's own story of how this sturdy machine performed:

"One of the most useful necessities of our equipment for the 'Speejacks' was the Remington Portable Typewriter we purchased before leaving America. It stood the inclement weather, the torrid heat of the tropics and the frequent douchings of salt water without loss of efficiency.

"I don't suppose that any typewriter in existence ever had harder wear or went through a more stormy period than did this typewriter.

"It is in as good condition today as the day we bought it. I am still using my Remington with a great appreciation of its endurance and efficiency."

The Remington Portable has the Standard four-row Keyboard. Fits in a case only four inches high. For sale by over 2500 dealers and Remington Branches everywhere. Write to us for "Your Ever Handy Helper." Address Dept. 59.

*Easy payment terms if desired*

**Remington Typewriter Company**  
374 Broadway, New York

*A good typewriter deserves a good ribbon. Use Paragon Ribbons on Remington Portable Typewriters. Made and sold by us.*

## Why worry about your baggage?

**EVERY** season tourist baggage is exposed to many hazards. Are you prepared for possible loss? Your baggage is valuable. *Insure it.* A short trip is as great a risk as a long tour. *Always insure.*

A North America Tourist Baggage Policy will relieve you of countless worries when traveling and protect you from financial loss if your baggage (or any part of its contents) is damaged or lost.

## "WATER-BUG"

THE LIGHTEST, LIVELIEST BOAT MOTOR ON THE WATER.

"I kept still, but when the door opened into the room where she was, I just pushed ahead and said:

"Madam, I have come to ask you for two thousand pounds to help build a new mission down at Carrubers Close."

"She threw up both hands and exclaimed, 'Oh, mercy! Mr. Moody, I cannot possibly give more than one thousand.'"

"This reply astonished the timid minister so much that he almost fainted, and when we got outside he said: 'You'd better go ahead.' And I did."

"I am not sure whether Moody and Andrew Carnegie ever met," Doctor Mott continued. "If they did they must have enjoyed each other. Of all the men of business whose vision had impressed me, and there have been many, I think Carnegie deserves to be mentioned first. Always he saw a little farther and a little sooner than those who were pitted against him; his whole life teems with evidence on this point. When hardly more than a boy in years he had seen in the Pennsylvania Railroad Company's works the first small bridge built of iron. It proved a success.

"I saw that it would never do to depend further upon wooden bridges for permanent railway structures," he writes. "An important bridge on the Pennsylvania Railroad had recently burned, and the traffic had been obstructed for eight days."

"Thousands of men saw, or read about, that fire. To them it suggested nothing except that a new wooden bridge would have to be built.

"**H**ERE is a paragraph by Carnegie himself to the same effect:

"While visiting the Continent of Europe in 1867, and deeply interested in what I saw, it must not be thought that my mind was not upon affairs at home. Frequent letters kept me advised of business matters. The question of railway communication with the Pacific had been brought to the front by the Civil War, and Congress had passed an act to encourage the construction of a line. The first sod had just been cut at Omaha and it was intended that the line should ultimately be pushed through to San Francisco. One day, while in Rome, it struck me that this might be done much sooner than was then anticipated. The Nation, having made up its mind that its territory must be bound together, might be trusted to see that no time was lost in accomplishing it. I wrote my friend, Mr. Scott, suggesting that we should obtain the contract to place sleeping cars upon the great California line. His reply contained these words:

"Well, young man, you *do* take time by the forelock."

"Out of this flash of vision, promptly acted upon, grew the negotiations which resulted in the formation of the Pullman Company. Carnegie had been wise in time. But many men in their youth have vision, only to lose it, and draw more and more into themselves as they advance into middle age," Doctor Mott continued. "The inspiring thing about Carnegie was the fact that his vision kept so clear and keen up to the very end of a long life. It was pathetic to hear him tell of his hunger for books as a boy; but even as he talked about it his eyes would light up, he would lean forward and begin to tell of his libraries, and how he meant to put good books within the reach of boys in every town, so that no boy, in the future, should starve as he had.

"The war thrust deep into Carnegie's heart and undoubtedly hurried his death.

He had dreamed so long of a warless world and invested so heavily in his dream, building the splendid palace at The Hague, and establishing his international foundations of various sorts. Yet even through the smoke and suffering of the battle he kept his eyes focused on his vision. He began to see before the end that out of the war must come some sort of international understanding, that all which he and other great builders had done in drawing the world close together with bands of steel, and wire, and ships, and other methods of communication, especially in the promotion of conference, consultation, and common action, must necessarily bear fruit. So he died, as he had lived, discounting discouragements, refusing to accept any limitation as final, looking always at the something better and bigger just beyond.

"Thus, though they differed so widely in externals, Moody and Carnegie seem to me to belong together, as illustrating the power of vision. And with them, if I were to select a representative from the statesmen I have known, I should put Roosevelt. He lived so much in the limelight, so many of the illustrations of his vision and vigorous action in obedience to that vision have been printed, that dozens of anecdotes occur to any who knew him.

"Once when I saw him in the White House I happened to mention the fact that I was preparing a little book on the 'Future Leadership of the Church,' and a series of accompanying pamphlets. Now, that is rather a technical subject, so to speak, not a matter in which a busy President of the United States might be expected to show any special interest. He had a thousand problems on his calendar pressing for decision; the most that could have been expected from him was a casual word of friendly interest. But Roosevelt kindled at once.

"I'd like to write a letter to go with that book and those pamphlets," he exclaimed.

"I told him that I should be delighted, of course; and I went away, supposing either that he would forget the suggestion, or that I should receive a brief note, bearing obvious evidence of the pressure under which it had been prepared. Imagine then my surprise to receive within a week a long, carefully-thought-out letter—a real, outstanding contribution to the purpose which the book was seeking to express.

"A FEW months later I called on him again, this time just before a journey to Russia, where I had been invited to address the students of the principal universities; and an almost identical thing happened.

"I want to send a message to the young men of Russia," he exclaimed. "Will you take it for me?"

"The message proved to be a four-page letter, which reached me in New York shortly before I sailed. It revealed marvelous foresight as well as insight regarding the limitless possibilities of the Russian peoples."

"Those incidents have no great historical significance," Doctor Mott went on. "Hundreds of men could tell Roosevelt stories of the same character. But trivial as they are, they throw a great light on the secret of Roosevelt's power. His vision saw an opportunity in even the smallest occasions; the great structure of

his influence was built up out of thousands of little things. I say to men sometimes, 'If you have lost something, the place to look for it is where you think you lost it.' If you have lost vision, the place to find it is at your right hand. Moody found his vision in the crowd of urchins who lived in the same street; Carnegie found the vision of his bridge company in that crude little iron bridge in the Pennsylvania shops; Roosevelt saw in every man who came to him an opportunity to broaden his influence for good.

"That seems to me to be a partial answer to another part of your question," Doctor Mott continued, "the part in which you ask whether vision is a quality that only one in a million can hope to have, or whether the seeds of it are in all of us. The beginnings of vision are in us all; we cannot quarrel with fate on that score. So sure am I on this point, so confident that vision develops with exercise, like a muscle, that the tests I apply to men who are to be associated with me are tests that seek primarily to determine whether the processes of development are at work. Of course I want to know a man's background, and to have his own statement of his purposes, as he conceives them. But beyond that I want to know not how far ahead he thinks he can see at the moment, but whether growth has stopped or is going vigorously on.

THESE are the tests:

"1. Does he do little things very well? A great deal was said and written, especially during the war, about executives who take no cognizance whatever of details. My experience with executives has been that the biggest of them are frequently 'detail men' to a degree which would astonish the man on the street. They delegate great powers, to be sure; but the little things which they touch—and they touch many of them—they care for with a fine precision and thoroughness. No man can be more damaging in any organization than a would-be executive who, in his reach for larger things, despises and neglects the little responsibilities confided to his care. Such men are visionary, not men of vision.

"2. Has he learned the meaning of order as to time and place? Napoleon fought his earlier and most brilliant battles against forces far superior to his own. But he arrived always a little before the opposing generals expected him. Men who have the beginnings of vision get to the place of their engagements at the time appointed, or a little before.

"3. Has he learned the meaning of priorities? Does he do first things first? So few men think things through before they start. Hence the work of the world is constantly delayed because some perfectly well-meaning individual, who has been working with good conscience, is busy on an operation that ought to be Number 20, when he should have started and finished Number 1.

"4. How does he use his leisure? If I can know what a man does on street cars and trains, on holidays, and in the free hours of the evenings, I can give a pretty good guess as to where he is headed and how likely he is to arrive. The first time I saw Roosevelt after his election to the Presidency he was standing in the rear corridor of a Pullman car, where he had slipped away to escape the reporters and politi-

## "That is how I should protect my family"

"What this booklet says is right to the point: 'To completely safeguard your family's future it is often not sufficient to leave to them money or property in bulk, but it is wise to place at least a reasonable proportion in trust for their benefit.' That is how I should protect my family."

"IT IS EASIER to make money than to keep it," runs the adage. Yet men who know how hard it is both to make and keep, expect their families, who may merely inherit a large sum, to know how to protect it.

There is a way to safeguard such funds. By having a proper will or trust agreement drawn, you can leave your insurance, securities, and other property in the care of a trust company for the benefit of your family.

The trust company will make sound investments and pay the income regularly to your beneficiaries. If you so direct, it will pay parts or all of the principal, at stated periods, in case of illness, or in other contingencies. A trust arrangement is so flexible that you can accomplish with it almost any purpose you may

have in mind. Consult a trust company as to how it can serve you.

The trust companies of the United States hold hundreds of millions of dollars of trust property in their care. By naming a trust company as your trustee, you can insure fidelity to your wishes and protection for your family.

### Ask a Trust Company

for the booklet, "Safeguarding Your Family's Future." It may help you solve your problem. It discusses wills and trusts, their protective features, and the advantages of trust company service. You can also obtain it by writing to the address below.

cians who had been crowding around him all day long. I was curious enough to discover what book he had in his hand. *He was reading Plutarch's 'Lives.'*

"5. *Has he intensity?*" Emerson said, "Nothing great was ever accomplished without enthusiasm." There are men who come into your office bringing something electric with them; you feel the throb of their interest even before they speak. And there are other men who bring nothing but the vague, undefined desire for a job. Unless I, myself, am stirred, even if only a little, by the energy and magnetism of a man, I have very grave doubts whether he will create much of a stir in any position he may seek to fill. This may sound very unscientific; it may seem to attach an undue importance to first impressions. But, after all, business is made up of a succession of first impressions; few busy men have time to read letters of recommendation, and few discerning men attach great importance to them. They warm toward a man, or are cold, according to the thrill, or the lack of thrill, which he carries with him when he steps through the door.

"6. Moreover, I want to be sure on this point: *Has he learned to take advantage of momentum?*" Or does he, with a small success, lean back upon his oars? Almost every biography you read impresses you with this fact—that, while it may take years to lay the foundation of a big achievement, the achievement itself is a matter of a few years, sometimes of a few months. It is like one of these modern skyscrapers, whose parts have been fashioned in steel mills hundreds of miles away. Day after day you pass what appears to be only a hole in the ground, sunk with painful toil through the solid rock. Then the foundations appear, and suddenly, as if by a miracle, the building is buckled together and stands complete. Businesses are like that; men are like that. A man will work for years preparing himself; at length comes a little recognition, a little success. That is the crucial time. If he slackens his effort, if he begins then to take things a little easier, he has staked out the boundaries of his career. But momentum, rightly accelerated, increases in geometric ratio; there are times when a month is worth a decade if a man who has been pushing hard knows how to push just a little harder.

"THOSE are not new tests," Doctor Mott concluded. "All executives, I imagine, apply them in one form or another. If a young man measures up to them, even though his vision at that moment extends only to the job immediately before him, I feel pretty confident that he is coming out all right. He can develop his vision. There are three perfectly definite things which he can do to develop it:

"First of all, he can mingle with people who have vision. They are not all in New York or Chicago; every Main Street has men in whose presence it is easier to believe. Nor are all the men of vision still alive; thousands of them live only in books, and must be cultivated there. In my own library the largest section is devoted to biography; it is a favorite form of reading with me. I have already referred to that time when I found Roosevelt, at the beginning of his Presidency, renewing his friendship with the great

statesmen and generals and sages of the ancient world. I went home from that trip and dug out my own copy of Plutarch and read it through again. I finished with a renewed consciousness that no man can spend long hours with Plutarch's characters and not take on quality. The Men of Vision are our slaves; every book shop offers us the service of their inspiration and guidance, for a few pennies. How shortsighted we are if we pass our whole lives in the company of those who are no bigger than ourselves.

"THERE is some power in nature that enlarges and lengthens a man's vision. Just how to define it I do not know, but I have experienced it myself and many men have testified to it. It is, in my judgment, the second source of help open to every man. Cecil Rhodes, you remember, built his house in a place which commanded a view of the great Table Mountain. When I was there I was told that it always made him uncomfortable when a visitor sat with his back to that wonderful outlook; Rhodes would stir uneasily in his chair and finally ask the visitor to turn around. Sitting there, often alone, and looking out over the audacious achievements of nature, he built the dreams that became an empire. It is not by chance, as someone has remarked, that all the great religions have come to us out of the East. There is something in the vast expanses of the desert which sets the souls of men to brooding on the wide-reaching and eternal things. I said a little while ago that the place to find vision is right around you, and I do not mean to say anything which will contradict or detract from that statement. But many men never see, because they do not take the time to think. It is worth while at frequent intervals to get away, into the woods or mountains, or beside the ocean or on the edge of the great plains, and there to revise our petty and immediate concerns in the presence of Nature, whose spaces are so vast and whose processes are so patient, so eternal.

"Finally, there is Faith, the third source of vision and the most important. You know there is a verse in the Bible which reads: 'Faith is the substance of things hoped for.' I have never liked that translation; the marginal reading seems to make the meaning much clearer. 'Faith,' it says, 'is the giving of substance to things hoped for.' That throws a very different light on the matter, doesn't it? Plenty of people talk about Faith, by which they mean a flabby hope that somehow everything will come out all right. That Faith is futile, it disgraces the name. Real Faith says: 'I believe in myself. I believe in other men.' As Moody did. As Carnegie did, suggesting as his chief claim to fame that he had 'known how to get men around me who had more brains than myself.' And, 'I believe in the significance of the universe, that somehow behind it there is a great guiding Mind.'

"In crossing the Pacific last spring I talked for a long time with Admiral Baron Kato, on his way home from the Washington Conference, now premier of Japan, and one of the powers of the present-day world. Said he very earnestly:

"All the peoples of the world are looking to America for light and faith."

"For the faith which sees clearly and works confidently to bring things to pass."

## A Great Woman—Who Didn't Know It

(Continued from page 58)

class in Sunday-school—for the same reason she told stories at the home. It was there she met David Bruce. Bruce was a student at the university. He was studying for the ministry. Just an ordinary man, with not even a special talent for speaking—an ordinary man who wanted to be useful. He was very boyish then and good-looking in his big, fair way. He did not look much like a theological student.

Bruce noted Sarah's class before he noticed her. It was made up of boys at the difficult age of ten. Another class, boys the same age, was unusually riotous. Bruce looked from this class to Sarah's. Every pair of mischief-capable hands was quiet. Every pair of trouble-hunting eyes—black, blue, and brown—was absorbedly watching Sarah's face. So Bruce watched, too. Bruce soon began coming to Sunday-school more to watch Sarah than for scriptural guidance. In time he came to know her.

Sarah had not counted on having any David Bruce upsetting her dreams. But she married him after she'd known him just seven months. Her folks were pleased. They thought she had done well.

After her marriage Sarah had some bitter moments before her ambition yielded to her love. Even then it was only a half-surrender.

"I don't have to be ordinary just because I'm married," she insisted to herself. "A minister's wife has all sorts of opportunities to use her ability. David is going to have a big church some day, and I'll have to be ready when the time comes—to do my half."

SO THE dream still clung. But four babies came then, like a little flight of stairs—Kathleen and Philip and David, Junior, and Chloe. They lived in Coryville when the children were born.

Sarah had been so glad of the first one. The planning and the waiting and the extra tender loving from David were very sweet.

But when Chloe came, Sarah was a little worn and quiet, and the first wildly exquisite sweetness of motherhood had become a little dulled. They had to move when Chloe was only six weeks old, and it took so much strength and so much money. The fun of making the little salary stretch was not so full of laughs as it had been. For one extra—that didn't seem much; but shoes and stockings and hats for four—that did mean pinching. And Kathleen was starting in school; that meant books. David was shabby.

Measles and whooping cough and croup—Sarah came to know them all, sometimes with a horrible fear in her heart. She learned how to sew. And now she no longer saw herself a public idol. She admitted to herself that it was out of the question with the four little Bruces.

She brought her stories out of the past. She had purposely let them go. It somehow hurt to remember them. But she got them out and memorized them anew, lying awake nights to go over them in her

# Who Raises Checks?

## Penman Gets 10 Years

F. J. Colladay, 40, in an attempt to pass a check raised from \$48.50 to \$26,148.50, in Cleveland, on January 2nd, was arrested and convicted to Ohio State Prison, Columbus.

Colladay, whose right name is Fred Wm. Unger, is believed by the authorities to be a member of "a gigantic ring of check operators." He refused to betray his pals and took his medicine. His confederates are still at large.

On December 21st Colladay sold a Liberty Bond to a well-known Detroit brokerage firm. He received their check for \$48.50, drawn on an ordinary unsafe bank check and written with a patent check protector machine. Using the same type of check writer, Colladay cleverly altered the amount. He is then alleged to have forged the certification of The People's State Bank, Detroit.

On January 2nd he attempted to cash the check at the Cleveland Trust Company but was arrested by Bank Detective John Shibley. As Convict No. 47752 he is now doing 10 to 20 years in Ohio State Penitentiary.

This is but one of the many such cases each year. Super-Safety Insured Bank Checks provide the only positive protection against check alteration.

## Why banks now give depositors \$1000 insured checks

Burns Protection

Are you one of the people who thinks that, just because your checks have never been tampered with yet, you are immune from checkraisers? Every time you sign an ordinary unsafe bank check you invite alteration. Over \$50,000,000 was lost in 1922 in check frauds alone.

Insured by the Hartford

Now every bank depositor in the country can have positive protection for their checks.

Go to the bank in your city which has its customers' best interests at heart. You will probably find they now use Super-Safety Insured Bank Checks. Or they will be glad to know about them.

Besides defying acids or erasers, these checks are insured. In the front of each check-book there is a miniature insurance policy in the Hartford, protecting you up to \$1,000 against loss by alteration. The bank keeps the master policy. Behind each check, and the bank, is the added protection of The William J. Burns International Detective Agency, Inc. Send for our private edition of the great book by Burns, "Stories of Checkraisers—and How to Protect Yourself." This interesting book will be sent free. Just mail the coupon.

And ask your banker to tell you about Super-Safety Insured Bank Checks. He is probably one of thousands who now gives his depositors this positive protection.

We Began  
Saving"

"Remember how we used to try to accumulate money, how we used to make New Year's resolutions to put aside so much a week? We would stick to it for a little while and then give it up. Years went by, and we never got any richer. Now that we have a nice little pile of bonds tucked away, it seems strange that we were so slow to find out that the only sure way for us to accumulate money is to invest it while we have it, on pay day."

Investing on pay day, even as little as \$10 at a time, is the only way most people can get ahead financially. But such investing is a sure, powerful and increasingly rapid way of accumulating a little fortune. When you buy Miller First Mortgage Bonds, paying up to 7% interest, and when every partial payment you make draws interest at 6% from the day we receive it, the interest payments help you toward success faster and faster. Write today for the free investment story, "When Lucy Farrar's Ship Came In," which tells how one family succeeded in accumulating money.

\$100 Bonds; \$500 Bonds; \$1,000 Bonds  
Interest Paid Twice Yearly

Yield: Up to 7%

Partial payment accounts invited

mind. One day it came to her that they were even more beautiful than when she had told them to the seventy little Hebrews of the Adams Street School. She grew fascinated at bringing out their hidden meanings and delightful phrasing.

The attic of the new home at Arden Center Sarah fixed up for theatricals. She called it the nursery to David, but it was in reality the stage on which her dreams were played. She scrimped on carpets and dishes and hundreds of little things to further the dreams. The parlor curtains that had seemed quite all right for Coryville were three inches too short for Arden Center, and they showed wear where baby hands had pulled at them; but Sarah kept them white, and darned them—and bought a book of fairy tales.

They had been married twelve years before the realization that David was an ordinary man came to Sarah. Always before he had been a brilliant young man working toward a big goal, and she and the children were working with him. But the time came when she saw him as he was: faithful, energetic, loving, kind—but ordinary. She knew then that they would go on living in places like Arden Center to the end of the chapter. It did not lessen her love for David. It added to it a fierce, protective tenderness. But the dreams all went into the children.

Kathleen was like her mother—vivid, dark, a joyous little mimic. Philip was like his father—lovable, but quite commonplace. Davie, Junior, was quiet and dreamy; but he had a startlingly keen humor and a passion for books; Chloe was the puzzle. She was undeniably beautiful, but with a far-off, proud beauty hard to understand.

"At any rate, they shall have a chance to become big men and women," Sarah vowed to herself. "They must have a chance from the beginning."

SHE realized after a few years that their home, while comfortable, was not different from many, many other homes of Arden Center. She had been going to have a new suit, the first in five years, that fall. She had gone without butter for two years in its anticipation. But she went to the city and spent the money for a picture, a copy of a very great painting. It was a good copy. David was disappointed that she had not bought the suit. Sarah took down three pictures of no value and hung the new one. It transformed the whole house for her, and she watched its influence creep into the lives of her children.

She saw that the plain or fussy clothes of the Arden Center children all were from the same mold. She began to make her children's clothes different.

To the one good picture were added in time three more equally good. The little shelf of books became many. It meant potatoes boiled in the skin to avoid waste, an intense care of the little stony patch they called their garden, hours of study as to how to get the most out of a yard of gingham, stockings darned and redarned and then patched. But Sarah, watching Kathleen unfold dramatic powers far above what hers had been, and David writing little compositions with a touch of genius in them, was glad to sacrifice.

Other boys and girls were always in their home. Sarah blessed the stories and the pictures and the hard-taught,

homemade lessons that enabled her children to pick the chaff from the wheat of these friendships. Sometimes she felt far away from them all herself, and she was hurt at the feeling. She wanted to let them know she understood their strivings, their temptations, their dreams. But she couldn't tell them; so she made pop corn for the crowd instead.

Chloe continued the enigma all through her school days. Yet somehow her mother hoped the most for Chloe. It seemed to her as though, back of the child's queenly silence must lie something big and powerful. Yet she showed no special aptitude for anything.

"They must go to college," Sarah and David had agreed from the beginning.

When the time came Sarah took the children and went up to Syranac. David stayed behind in Arden Center.

Sarah took college girls to room. She had to earn money some way. It hurt at first that she had to break up the privacy of their own home, but it had to be roomers or perhaps something more difficult. Sarah determined, however, that it should still be their home. And she made it so. Two of the well-loved pictures came from Arden Center and a few intimate pieces of furniture, and dishes and most of the books. Even with second-hand furniture, Sarah found she could make the roomers' rooms homelike. She tried to put in each girl's room at least one thing that made it distinctive, a something such as she had tried to put into her own children's rooms and lives.

KATHLEEN took up work in Fine Arts. She was soon the acknowledged leader of the College Dramatic Society. Philip studied engineering, which was quite what Philip should have studied. Perhaps he lacked the vision ever to make a great engineer, but he would make a faithful, accurate, dependable one. Davie's boyish talent for composition continued to develop and he wrote, wrote, wrote. Davie would write something remarkable in time—one of the literature professors told Sarah so. She knew he would, too.

Chloe made no special mark in anything. She was unapproachable still, and yet there was a sweetness in her lovely gray eyes, a charm about her quiet speech that entranced her mother. She liked athletics, and she got fair marks in languages; but she didn't shine anywhere. She would have been very popular if she had let herself go a little. In small, subtle, not-to-be-expressed ways, Sarah thought she was more unselfish than the rest. But all the time Sarah had a sense of waiting for her to wake up to her destiny—to unfold into something marvelous and dazzling.

Sarah had dreamed that in Syranac she would have a little chance to unfold herself. But it took so much contriving to make clothes enough for Kathleen and Chloe, so much time to look after the roomers and keep the home a home, it took so much energy to keep bills down so that there would be enough for books and tuition, that there wasn't much opportunity left for self-improvement. The children helped, all of them. The boys found lots of outside work, and Kathleen earned quite a bit giving readings in unimportant suburban towns for an entertainment bureau. Chloe went out

Among public betterments open to all cities, better street lighting makes the most improvement at the lowest cost

## If Mandan can, you can

The same street lighting engineering service that helped Mandan to illuminate is at the service of your city. These specialists are part of the General Electric Company; an organization of 100,000 men and women who make apparatus through which electricity is put to work.

One of the best lighted towns in the United States is Mandan, North Dakota, which has one ornamental street light to every ten residents.

Better street lighting means safer streets and higher property values. Yet the cost per person per year is so small that every live town can afford it.

If Mandan can, you can.

# GENERAL ELECTRIC

evenings and stayed with the children of the professors. She even washed dishes occasionally for the professors' wives. Her mother objected to the latter. Chloe's lovely lips went down, wryly humorous:

"Thirty cents an hour—it doesn't take many dishpans full to make a new shirt-waist, Mumsie!"

For four years Sarah and the children stayed in Syranac. They'd all gone to college together. Rather a queer situation; but Kathleen had waited a couple of years for the rest to catch up; the boys had always stuck together, and Chloe, with a little extra tutoring and a couple of entrance conditions, managed to hang on. They were known on the campus as "The Bruces." They couldn't have come at all unless in the way they had—with the rooming house and Sarah to sew and mother them all.

At commencement time David came up. He was happily proud of his boys and girls, and still much in love with Sarah.

Kathleen had the leading part in the college play. Sarah could have cried with joy at her ability. Kathleen had been offered a chance to go abroad and study. She would be famous. She was almost famous now. She was, at least, very important in her own small world and beginning to be talked about outside it. Philip had a fine chance with an Oregon firm. Davie had already had real encouragement from a worth-while publisher. It was their last night in Syranac that Chloe came to her mother, who was up in the girls' bedroom.

"Mumsie," she said—she seemed far away as always, and yet Sarah noted that her eyes were gloriously alive, that her lips smiled in such sweet tenderness that it hurt—"Mumsie, I'm going to marry John MacCullam."

SUDDENLY Sarah felt old and worn-out and useless and disappointed. She had tried to build surely and strongly, but she had a hideous sense of failure. Kathleen and Philip and Davie—all where she had dreamed they would be. But Chloe—somehow she had depended most of all on Chloe, and Chloe—was going to be married!

Married to Dean John MacCullam of the College of Pedagogy, a young man to be a dean and a very brilliant man; but somehow it was not what she had dreamed of for Chloe. The sense that everything was finished, that she was not needed any more, turned Sarah suddenly sick. All her dreams—and now nothing. She knew suddenly that she had been mistaken. She had thought that when her children made true her dreams, she would feel a share in the fulfillment. Their life would be hers. She would feel the success that had been denied her, in their success. But it was not so. They had all made good—and she was not part of it. They could all go on quite well without her. She had thought part of the glory would fall on herself. It did not even remotely touch her.

Sarah longed unaccountably to put her head on David's shoulder and cry. Not that David would have understood her tears. But David was somewhere with the boys. Kathleen was at the theatre. All the roomers had either gone home or out somewhere. The house was very quiet. Sarah remembered that the boys

John Lloyd Wright, Inc., 716 N. Wells St., Chicago

had asked her to have something to eat at nine. It must be almost nine.

She put on some slippers in place of her new uncomfortable in-honor-of-Commencement shoes, and crept down to the kitchen. But once there she couldn't seem to think of the nine-o'clock feed for her boys. She felt so old and tired. She would sit down just a minute. She went into the living-room and sat down in the quiet of the June dusk.

Suddenly she heard a man's voice from the veranda. John MacCullam's. Then Chloe's in reply. They were talking of her!

"Yes," Chloe said in that strangely sweet voice of hers, "yes, John, Mumsie is wonderful. I'm glad you see it, too. I didn't use to realize it so much; but lately, since I—I've loved you, I've known it better. You know, we've never had much in the way of money. Ministers' families aren't apt to. But still, it seems to me, we've had *everything*. See what Mumsie's made Kathleen into; Kathleen's going to be great! And Davie too. I remember now all the stories and games when we were little, and I can see they all had a purpose—though of course they were just fun then.

"And she's brought out the very best in Philip. Philip's no genius, but he's going to get ahead!"

THERE was silence for a minute. Sarah waited breathlessly. There was an inaudible whisper from John MacCullam. Then Chloe's voice again.

"But I'm not envious of the rest," she said softly. "I think sometimes that I've got the very best of all from Mumsie. I'm not as clever as the rest. I've sort of stood off and looked on at them all my life. But by looking on I think I've caught a vision of home-making that maybe the rest of them have been too busy to see.

"To make a home, John,—such as my mother has made—out of nothing! It seems incredible. In little towns where there were no books, no amusements, no good music, no anything! But she gave them all to us right within our own walls. There wasn't any money; it just came out of her, somehow. And above everything there was love. Why—she and Dad—"

Another silence.

"I think I have an idea, dimly of course, but a sort of realization of how we can make a big thing out of our home. And when I think of some of the careless, inspirationless homes I've been in—that's a pretty big heritage, John. I wish I could tell Mumsie what she's done for me. But you know how you just *can't* say things to your own folks that you live with day after day! Only, it seems as though I must tell her how wonderful she is, how dear, how out of the ordinary, how—"

Sarah got to her feet blindly, and stumbled out into the kitchen. She opened the table drawer, took out the bread knife and began to make sandwiches hurriedly, satisfyingly man-sized sandwiches. She opened her last jar of grape conserve. She got out the coconut cake. Once she wiped her eyes quickly on her apron. But back of the tears was radiant joy, and, better than joy, peace.

## If the subscriber paid direct

Suppose that every Monday morning all the people who have a hand in furnishing your telephone service came to your door for your share of their pay. From the telephone company itself, would come operators, supervisors, chief operators, wire chiefs, linemen, repairmen, inspectors, installers, cable splicers, test-boardmen, draftsmen, engineers, scientists, executives, bookkeepers, commercial representatives, stenographers, clerks, conduit men and many others, who daily serve your telephone requirements, unseen by you.

There would be tax collectors to take your share of national, state and municipal taxes, amounting to over forty million dollars. There would be men and women coming for a fair return on their money invested in telephone stocks and bonds—money

which has made the service possible. Then there are the people who produce the raw materials, the supplies and manufactured articles required for telephone service.

They would include hundreds of thousands of workers in mines, smelters, steel mills, lumber camps, farms, wire mills, foundries, machine shops, rubber works, paint factories, cotton, silk and paper mills, rope works, glass works, tool works, and scores of other industries.

When you pay your telephone bill, the money is distributed by the company to the long line of people who have furnished something necessary for your service. The Bell System spares no effort to make your service the best and cheapest in the world, and every dollar it receives is utilized to that end.

## FISHING FACTS

—and Outers' Recreation  
for 4 months—\$1.00

Here is a 96-page handbook packed with valuable information and instruction on every form of fresh-water fishing. Illustrated. Authoritative. Simply written and intensely practical. Priced at 50c and worth ten times that amount to any angler—novice or expert.

Four big monthly issues of America's liveliest outdoor magazine (regularly 25c per copy) and "Fishing Facts"—yours for \$1.00. "Fishing Facts" alone 50c.

Ask 2. OUTERS' BOOK CO.  
302 North Dearborn St. Chicago, Ill.

By what you might call a process of natural selection, every man with an extra tough beard sooner or later becomes an addict of Mennen's. Some men have naturally docile beards. If allowed to grow, such beards are of fine, silky texture. These men are to be envied, for they have no shaving problems. Any soap, cream, or salve will soften their beards. Shaving with them is little more than a gesture.

But it is an altogether different matter for the fellow whose face around five o'clock begins to look like a miniature field of Kansas corn stubble. That kind of a beard is a stern reality. Its owner goes through a regular course of trying every razor and shaving preparation. He becomes a shaving skeptic.

But at last he buys a tube of Mennen's—not hopefully, but because he *must* try something else. I doubt if we've ever missed out on one of these tough cases.

Mennen's will positively soften the meanest beard that ever soured an otherwise cheerful nature. I'll back up that statement in a few minutes—in the last paragraph to be exact. Furthermore, these mean beards, when Mennenized, come off smoothly, gently and as closely as you like. The skin isn't drawn or irritated. There is no after smart.

For Mennen's, in addition to being a great beard softener, is a skin conditioner. It contains Boro-glycerine. After one Mennen shave, Boro-glycerine is the name of a friend. It is a healing emollient which softens and relaxes skin tissues, is mildly antiseptic and keeps your skin soft, pliable, and healthy. A tough beard almost invariably means tender and easily irritated skin.

The creamy, non-drying Mennen lather can be built with any water—cold or hard—without rubbing with fingers.

Buy a tube of Mennen's. Use it for a week. If not convinced, send tube to me and I will refund purchase price.

THE MENNEN COMPANY  
NEWARK, N. J. U. S. A.

*Jim Henry*  
(Mennen Shave-cream)

## Wheels Within Wheels

(Continued from page 15)

When at last dinner was over, Rob Peters made for the library, where he was joined by Ralph Howland. These two held confab, until Magee, in the billiard-room adjoining, overheard parts of the conversation and, unable to stand it longer, walked into the library.

"This is a private session, Mr. Magee," Peters said.

A quick glance at Howland made Austin Magee drop into a chair, with the easy remark, "All right, Mr. Peters, go ahead with it."

Instead of which, Rob Peters rose and went angrily from the room.

The two men looked at each other.

"I've had news," said Magee, glancing about warily; "I can't go into details to-night; but there is a hope—"

"Lord, man, there's long been a hope—can't you say more than that?"

"Not to-night, Mr. Howland; and, besides, I want to speak to you now about this mine matter."

Ralph Howland stared at his secretary as if he had voiced some terrible treason. Then he said coldly, "Magee, I have not asked you to do that."

"I know it, Mr. Howland, but—"

"You know it; then you have nothing to say. I thought you must have mistakenly imagined I wished you to discuss it."

"I did not, nor do I wish to discuss it; but I do want to warn you—"

"You warn me! Austin, have you taken leave of your senses? You never spoke like that before! I will overlook it this time—but not a second time!"

"There will be no second," and very quietly Magee rose to go.

"Wait, Magee, a moment. What about the—the other matter?"

THE secretary hesitated a moment, for he was angry beyond all bounds. An instant of reflection, however, made him turn and sit down again. Drawing a memorandum book from his desk near by, he began a low-toned conversation which was steadily and continuously carried on by the two men for a quarter of an hour or more. They were so intent that they did not hear Leonard Swift's entrance.

"What's this?" Swift asked sharply. "I inadvertently overheard a part of what you were saying and I think I should be told all."

"Tell him, Mr. Howland," Magee got up suddenly. This time he went straight up-stairs to his own room.

In the hall he met Rob Peters.

"Howland at leisure?" he asked. "I'd like a few words with him."

"Mr. Swift is with Mr. Howland," Magee returned curtly, and passed on.

It was not long after this that the thunder, which had subsided to mere rumblings, began to grow louder. Another storm, doubtless, following the earlier disturbance. Mary Howland, in kimono and slippers, came from her room, evidently looking for her husband, but Edith Mills intercepted her in the hall.

"Come into my room, dear," she said.

"No," said Mary, "I want Ralph," and she went on down-stairs.

Next morning the sun rose clear, and the October landscape was as gorgeous and beautiful as if it had not been whipped and torn by the electrical storm of the night before. The few servants earliest on duty were about and one of them opened a back kitchen door in response to a knock.

Conrad Stryker, the half-wit, stood there. He was a strange-looking person—a strong man of about thirty, physically well built, but with a pale, vacant face, and staring blue eyes that rolled from side to side as if worked by some mechanism. His head was wide across the top. Anything going in at one ear and out at the other would have farther to travel than in most cases. He spoke earnestly but incoherently.

"Mr. Howland is dead," he said, turning round slowly, then suddenly turning back. "You want my father? I say—you want my father?"

"Go along home, Conrad," said Charles, the good-natured second man of the Howland house. "What are you doing out so early in the morning? Run home now."

"Yes—but Mr. Howland is dead."

"No, he isn't. Good-by, Conrad; go home now."

"Wait, wait!" the fellow cried, as the door was slowly closed against him. "I tell you he is dead—dead. You must have my father! You must! You must!"

CONRAD'S father was the village undertaker, a respected citizen of Normandale who had carried on his business for many years. The tragedy of his idiot son had saddened his life, and the harmless half-wit was the protégé of the whole community. Old John Stryker had performed his services for every family in the village, more than once in most of them.

Charles paused a moment, the door ajar, and looked at Conrad. He knew the poor unfortunate well, for he was often about the premises, and he saw that the vacant blue eyes were steady.

"Why do you say that?" he asked curiously. "Mr. Howland is in bed and probably asleep."

"No, no, no! He is not! He is not!" The voice rose to a shriek. "He is dead—in his room—his big room—by his desk—Come, I will show you."

Conrad's strong hand grasped Charles's arm, and half unwillingly, half fearfully, Charles let himself be led along by the idiot, who strode with him around the house to the great front veranda. Up the steps they went, and pausing at the open window Conrad pointed through it.

Trembling, Charles looked in, and saw his master, his head fallen sideways on his desk, his body relaxed and arms hanging down. He might be asleep, but he surely had all the effect of a lifeless man.

"Dead!" the half-wit crooned, softly. "All dead—dead—dead—" He chanted the word.

"Shut up!" cried Charles, his nerves giving way. "Stop that infernal noise! What does it mean? I daren't go in—"

He turned and ran back down the steps and around to the kitchens again, looking for his superior, Martin the butler. That

important personage was just coming down the servants' stairway.

"Mr. Howland is in the library—" Charles began, and his wild-eyed, agonized expression startled even the calm of the imperturbable Martin.

"Well?" he asked. "What of it?"

"Come!" and, beckoning the butler, Charles went toward the front hall. The door of the library was closed, and to the amazement of Martin his subordinate unceremoniously opened it.

Then both men stood still in horror. Viewed from that side, it was plain to be seen that Ralph Howland was indeed dead. No second glance at the staring eyes, the white face, was necessary.

And beyond the huddled form, outside the open front window, they saw the idiot boy, his mouth open and his round blue eyes gazing at them.

"You want my father?" he repeated.

"No!" cried Charles, in utter exasperation at his persistence. "When we do, we'll send for him. You go home."

"Wait a minute," said Martin. "What are you doing here, Conrad?"

"He was wandering about when I came down," said Charles. "Send him home. What must we do, Martin?"

"Go for Mr. Magee," the butler ordered. "Don't tell anyone else, until he says so. He's in charge—"

"Mr. Swift—" Charles suggested.

"No; get Mr. Magee first."

SO CHARLES went quickly up-stairs and tapped at the secretary's door.

"Well?" was the response, as Magee opened the door.

"Please come down to the library, sir," Charles said. "Don't wait to dress—put on a bathrobe!"

Quick-witted Austin Magee wasted no time on questions. Slipping into some clothes and hurrying down-stairs, he reached the library door to see the butler bending over the body of his dead master.

"Don't touch him, Martin," he cried sharply. "What has happened?"

"He's dead, sir," said Martin solemnly.

"Dead, dead," chanted Conrad, from the window. "You want my father?"

"He can't be dead!" said Magee, closely scanning the white face; and then, as he felt of the still wrist and the cold flesh, he added, "But he is!"

For a moment, Magee stood staring—unseeing, but thinking quickly.

Then he said, "Charles, go and get Mr. Swift. Tell him to hurry down. And, Martin, you go about your work. Serve breakfast as usual. You must tell the other servants, I suppose, but don't allow any noisy excitement or hysterics. We have Mrs. Howland to consider first of all. Don't let her be told of this by a servant."

"Very good, sir." And Martin disappeared.

Once alone, Magee did not look again at the lifeless body of his employer, but with swift, efficient movements he went straight to the safe, opened it, and rapidly selecting various papers and bundles of papers, transferred them to his own desk, which he closed and locked. He stood in thought a moment, then, listening for footsteps on the stairs and hearing none, he opened a drawer in Ralph Howland's desk. The position of the dead body made this difficult, but Magee managed it. He took out more papers and put these

## The Toll of Toil

**T**IRED faces—pinched, puffed, pallid. We see them on our homeward journey every day. They are the toll of toil, the price of progress.

Tonight examine these faces. Imagine a fairy wand which would erase every tired line, lift every drooping muscle, cleanse and close every relaxed pore and then restore the flush of clean, vigorously coursing blood!

There is such a "fairy wand." Its name is the **BONCILLA BEAUTIFIER CLASMIC PACK**. Here is conclusive proof of its quick, definite action.

### 839 People Made This Test

We asked 839 people, men and women, to write and tell in their own words just what the *Boncilla Clasmic Pack* did for them. Then we classified their replies. Here they are:—

- 447 said it removed pimples and blackheads.
- 105 said it removed their wrinkles and gave the facial muscles a youthful firmness.
- 47 said that it removed the oil from their skins.
- 119 said it closed the pores.
- 213 said it gave them color.
- 45 said it gave them a vigorous feeling.
- 8 said it took away that sallow look of the skin.
- 17 said it removed tan, sunburn and bleached freckles.

### An Inexpensive Test for You

Such definite testimony as this from men and women in every walk of life means much to you. In order that everyone may test the *Boncilla Clasmic Pack* we offer the *Pack O' Beauty* for only fifty cents. This serves as an inexpensive introduction. The coupon below should be used.

### Recall This Important Point

*Boncilla* is the *Clasmic Pack*. The results above were secured with *Clasmic Packs*. The conclusion is obvious. Remember it so as to insure the same results these 839 men and women obtained. All good druggists have *Boncilla*.

### What Is the Pack O' Beauty?

It consists of four complete *Boncilla Clasmic Packs*, *Boncilla Cold Cream*, *Boncilla Vanishing Cream* and *Boncilla Face Powder*. It is certainly an exceptional value and it is yours for 50c and this coupon. In the light of this definite, conclusive testimony, is there any reason why you should not mail this coupon now? The experience of 839 men and women insure your own thorough satisfaction. So don't delay.

## The WATCH CHAIN for Vestless Days

SUMMER makes a vest unpopular. But it also complicates the wearing of a watch. The long chain is laid away till fall and your watch becomes a liability, if carried loose in trousers pocket.

How, then, will you wear it? With a Simmons Belt Chain, of course! This trim chain is just long enough to reach from belt to watch-pocket in a graceful curve. Its patent clasp locks securely around the belt. At your wish it slips off again—by the releasing of its strong but tiny clasp. Nothing could be neater, nothing safer for your watch.

This Belt Chain is as beautifully and as thoroughly made as all Simmons Chains. There is the same substantial shell of gold, Platinumgold or green gold drawn over a less expensive base metal. The same variety of link styles is at your disposal.

There are many popular designs—\$2.50 to \$5.

See the Simmons Belt Chain at your jeweler's.

R. F. SIMMONS COMPANY  
Attleboro Massachusetts  
R. F. SIMMONS CO. OF CANADA, Ltd.  
Toronto Ontario

"For fifty years unsurpassed in watch chain value"

The Belt Chain neatly reaches from belt to watch-pocket.

In the panel above is shown a popular pattern twice enlarged. Notice the soundness of each link.

Patented clasp closed

Patented clasp open

also in his own desk, and again locked it. When Swift entered, the secretary stood with folded arms gazing at his one-time employer.

Leonard Swift, with tousled hair, dressing-gown over his pajamas, and shuffling bath-slippers, stopped short as he entered the room.

"My God!" he exclaimed. "He—he isn't—"

"Yes, he's dead," and Magee stood without moving.

"What—what from? Heart disease?"

"How do I know? He had no heart disease that I ever heard of!"

"But what else could it be? He wasn't—wasn't—" Swift's teeth chattered and he could not bring out the dreaded word.

"Murdered?" said Magee coldly. "I don't see any sign of it; but I think we must call a doctor at once."

"Yes, yes, of course. You do it, will you, Magee? I—I must dress."

"Yes; but wait a minute, Mr. Swift. I'll call the doctor, and he'll know what to do; but what about Mrs. Howland? Who will tell her?"

Swift considered.

"I can't," he said, at last. "Oh, I couldn't do it. Get—why, get Miss Mills to tell her. It's a woman's job, seems to me."

"Either Miss Mills or Nurse Lane," Magee put in; "both of them, I should say. Go on up and dress yourself. I'll send somebody for Amy Lane."

THERE was time enough to move slowly, Magee reflected. Since Mary Howland did not already know of the tragedy, it was probable that she would not be anxious for an hour or so, at least. If awake, doubtless she thought her husband in his own room; if asleep, she was secure for the moment. So Magee sent a message to Nurse Lane to come to him in the living-room as soon as she could do so. Then he closed the library windows, and shut the door as he went out.

"Has something happened?" asked Amy Lane, as, fully dressed and composed, she came to Magee.

"Yes; Mr. Howland is dead."

"Oh, my poor lamb!" and Lane's thoughts flew to her mistress. "Oh, how can I tell her? What killed him?"

The instant acceptance of the situation was characteristic of Lane; she had concern only for her beloved mistress.

"I don't know. I'm about to call Doctor Avery. He died in the night—he was still down in the library—"

"Bless us, Mr. Magee, was he murdered?"

"Not that I know of—" Magee looked at her thoughtfully. "Nurse, it's an awful situation, in any case. I'm going to depend on you to do your part, which is, of course, looking after Mrs. Howland. But, also, I want you to keep the servants in order. The women, particularly. I don't want a lot of talk and gossip and curious speculation. Understand?"

"I understand, sir," and Lane looked at him gravely. "Am I to tell nobody?"

"You are to tell Mrs. Howland. Lane, what do you think? Will Mrs. Howland be hysterical, or will she take it quietly?"

"Hard to say. She's more likely to be struck dumb—yet, again, she may go into violent hysterics. You know, there's been nothing like this since little Angela died."

"I know. That nearly unseated her reason; this may entirely do so. Do you want me to be present, or—or Mr. Swift?"

"No, not at first. I can do best alone. Of course you'll see her after."

Lane stalked from the room; but her usual militant bearing was gone. She was trembling, almost limp.

After calling Doctor Avery on the telephone, Magee remained in the hall, and shortly afterward Edith Mills joined him.

"Mr. Howland is dead," Magee said briefly. "He must have died in the night—while seated at his desk."

"But how—what—" Edith began.

"I don't know," and the secretary looked at her blankly; "it may have been a stroke, or heart disease."

"Where is he? I want to see him!" Her gray eyes filled with tears and her red lips quivered.

"Go into the library if you wish," Magee said, a little more gently. "Of course, do not—do not touch him."

"No." And without another word, Edith Mills went into the library and closed the door behind her.

Presently a suppressed shriek sounded from the library, and Magee rushed in.

"Oh!" she cried, "oh, that awful boy, that horrid idiot! Make him go away!"

Conrad was outside, his face pressed against the glass of the window.

"I'll settle him," said Martin, who had followed Magee. Out through the front door Martin strode.

"Conrad, you must go home at once—right now; and stay there! Go, go along."

By way of emphasis, Martin took hold of his arm and started the idiot toward the gate. "Go on, now!"

Reluctant, but obedient, Conrad went, muttering as he slowly shuffled his way through the fallen autumn leaves. As he went, a motor car passed him, and in a moment Doctor Avery entered the house.

IN SILENCE Doctor Avery approached the still figure and began his examination. Magee stood by with folded arms. Miss Mills, coming near him, watched the doctor, while her long white fingers twisted nervously. Martin came to the doorway, from which he was hastily pushed aside as Leonard Swift came through.

"What is it, Doctor?" he asked. "What killed him? Was it a stroke?"

Swift drew near, and ignoring the others took upon himself the mantle of authority then and there.

"Make your report to me," he said importantly; "now Ralph is gone, I'm at the helm. What was it, Doctor?"

"I confess I'm puzzled," and Doctor Avery turned a perplexed face toward his questioner. "I know Ralph Howland's physical condition as well as I know my own, and he had no tendency toward heart disease, no trouble of that sort whatever. He had no ailment that could have brought about this sudden death."

"Then was he—was he—!"

It was Edith Mills who spoke, her eyes big with terror, her face agonized, and her whole body quivering.

"I don't know." Again the doctor gave that baffled look. "There is no evidence of a crime." He scrutinized again the dead face, and bent closer and sniffed at the lips. "It is the most mysterious thing I ever saw! I must call in Mason."

"Shall I do it?" asked Magee.

"Yes. Call Doctor Mason, the county medical examiner, at once."

Still pondering, the doctor again examined the body, looked about the desk, and glanced over the room.

"Where's the bird?" he asked suddenly. The others followed his eyes to the gilded cage of Ralph Howland's pet canary. The door was slightly open and the cage empty.

"Queer!" Leonard Swift said. "That bird was the apple of Ralph's eye. Who could have left the door unfastened?"

"What about Mary?" asked Doctor Avery. "Does she know?"

"Not yet," Swift told him. "I just saw Nurse Lane, and she said she should wait until Mary had eaten her breakfast before she told her."

"Good," Avery commented. "Then let us have breakfast; I've had none, and we could all do with a cup of coffee."

It was Mrs. Howland's custom to breakfast in her room, so the others went to the dining-room.

"Guess I'd better tell Mary myself," said Doctor Avery, after he had made a hearty meal. "No telling what she'll do."

AS HE had cared for Mary Howland's physical well-being for many years, he tapped at the door of her boudoir without ceremony.

"Why, Doctor Avery, what are you doing here?" she exclaimed, as Nurse Lane let him in.

"How are you this morning?" and the doctor looked at her intently.

"All right," she returned brightly, but the eyes that looked up at him across her untouched breakfast tray were moving restlessly about, and her wandering gaze was unintelligent and uncertain.

"She won't eat," complained Lane; "she won't touch her coffee."

"Never mind. Put it away for the present," and the doctor sat down beside his patient and took her hand.

"Mary," he said, watching her closely, "where is Ralph?"

"Where is Ralph?" she repeated. "Yes—that's so; where is Ralph?"

"Do you know?"

"Do I know? No, I don't know—do you know? Does anybody know?"

"Mary," he spoke with a quiet emphasis, "Ralph is dead."

"Yes," she said, "I know that. Have you seen the will?"

(To be continued)

"ANIMALS Have Queer Streaks as Well as Folks" is the title of a group of extraordinary true stories about animals as told by Raymond L. Ditmars, the famous reptile and mammal authority of the New York Zoological Park. This article is both practical and fascinating. It was written by M. K. Wisehart.

HUGH S. FULLERTON will tell you next month the amazing story of "Bugs" Baer, one of the most famous newspaper paragraphers of the present day. When "Bugs" was a boy his parents were so poor and his brothers and sisters so numerous that "cheerfulness was all they could afford to have." To-day he is dispensing cheer to an audience numbering millions.

# I Will Give You a Chance To Earn \$200 a Week

RIGHT now, today, I offer you an opportunity to be your own boss—to work just as many hours a day as you please—to start when you want to and quit when you want to—and earn \$200 a week.

## These Are Facts

Does that sound too good to be true? If it does, then let me tell you what J. R. Head did in a small town in Kansas. Head lives in a town of 631 people. He was sick, broke, out of a job. He accepted my offer. I gave him the same chance I am now offering you. At this new work he has made as high as \$69.50 for one day's work.

You can do every bit as well as he did. If that isn't enough, then let me tell you about E. A. Sweet, of Michigan. He was an electrical engineer and didn't know anything about selling. In his first month's spare time he earned \$243. Inside of six months he was making between \$600 and \$1,200 a month.

W. J. McCrary is another man I want to tell you about. His regular job paid him \$2 a day, but this wonderful new work has enabled him to make \$9,000 a year.

Yes, and right this very minute you are being offered the same proposition that has made these men so successful. Do you want it? Do you want to earn \$40 a day?

## A Clean, High-Grade Dignified Business

Have you ever heard of Comer All-Weather Coats? They are advertised in all the leading magazines. A good-looking, stylish coat that's good for summer or winter—that keeps out wind, rain or snow, a coat that everybody should have, made of fine materials for men, women and children, and sells for less than the price of an ordinary coat.

Now, Comer Coats are not sold in stores. All our orders come through our own representatives. Within the next few months we will pay representatives more than three hundred thousand dollars for sending us orders.

J. R. HEAD

And now I'm offering you the chance to become our representative in your territory and get your share of that three hundred thousand dollars. All you do is to take orders. We do the rest. We deliver. We collect and you get your money the same day you take the order.

You can see how simple it is. We furnish you with a complete outfit and tell you how to get the business in your territory. We help you to get started. If you only send us six average orders a day, which you can easily get, you will make \$200 a week.

## Maybe You Are Worth \$1,000 a Month

Well, here is your chance to find out, for this is the same proposition that enabled George Garon to make a clear profit of \$40 in his first day's work—the same proposition that gave R. W. Krieger \$20 net profit in a half hour. It is the same opportunity that gave A. R. Spencer \$625 cash for one month's spare time.

If you mail the coupon at the bottom of this ad I will show you the easiest, quickest, simplest plan for making money that you ever heard of. If you are interested in a chance to earn \$200 a week and can devote all your time or only an hour or so a day to my proposition, write your name down below, cut out the coupon and mail it to me at once. You take no risk, and this may be the one outstanding opportunity of your life to earn more money than you ever thought possible.

## Find Out Now!

Remember, it doesn't cost you a penny. You don't agree to anything and you will have a chance to go right out and make big money. Do it. Don't wait. Get full details. Mail the coupon now.

C. E. COMER

## The Problem of Riding Ease

IT is solved only when the leaf springs of your car are so controlled that excessive and violent spring action is impossible.

That is the purpose of Hassler Shock Absorbers. Ten years' intensive application of the most highly developed automotive engineering has given them extraordinary efficiency. They minimize rebound and up-throw—the cause of most discomfort to passengers and most injury to cars on rough roads.

Over a million owners value Hassler Shock Absorbers not only for the unique riding ease they make possible, but also for the important economies of slower car depreciation, greater tire mileage and lower fuel consumption.

ROBERT H. HASSLER, INC.  
Indianapolis, U. S. A.

ROBERT H. HASSLER, LTD.,  
Hamilton, Ontario

*Hassler Shock Absorbers are for sale throughout the country. Wholesale stocks are carried at all Distributing Offices.*

## The Story of the "Czar of the Great Lakes"

(Continued from page 37)

his mind he had bought a textbook of some shorthand system. At odd times he studied this by himself. And in Cleveland, when he failed to be accepted as a sailor, he took stock of his resources and decided to be a stenographer.

At the beginning of our talk, before he had told me anything of his story, Mr. Coulby said, "My career, if we can call it by any such high-sounding name, has been nothing spectacular. It has been merely a slow, steady growth. I can't claim to have had any phenomenal talent, or to have staged any dramatic leaps and bounds.

"In looking back," he said thoughtfully, "I seem to have shown only two traits that especially helped me: For one thing, I always tried to take advantage of any opportunity I saw. Every man who achieves anything does do this. All young men have opportunities. They may say they have none, but that is a mistake. They either don't see them, or else they don't take them.

"The other quality which, as I realize now, had a bearing on my business future, was a certain degree of foresight. Like most young men, I started on more than one ladder; always at the bottom, of course. And my foresight amounted to just this," he said with a smile. "From my place on the lowest rung, I looked up to see how far the ladder reached.

"In business, you know, there are short ladders and long ones. On some of them, the top rung isn't much higher than the bottom one. If I found myself on one of these short ladders, I stepped off and tried to find one that reached higher."

WITH no practical experience and no training in business, it must have required some nerve for the boy to apply for the position of private secretary to Mr. Newell, then president of the Lake Shore and Michigan Southern Railroad, with its main offices in Cleveland. He did apply, however, and he got the job.

"That was in the spring of 1883," he said, "when I was eighteen years old. As the private secretary to a railroad president I was undoubtedly on a ladder that offered quite lofty possibilities. But it also offered some immediate and acute problems.

"My salary was forty dollars a month, which figures out at about nine dollars a week. I think I paid about six dollars a week for my room and board. Being in the president's office, I had to wear fairly good clothes. I had to have clean linen—and that meant laundry bills. And, of course, there were some other small but necessary expenses.

"I went to Mr. Newell and told him that I couldn't make both ends meet with the salary he was paying me, and asked for an increase. He didn't see fit to give it to me, so I looked for another position.

"I don't remember whether I advertised for one myself or whether I answered an advertisement. But whichever it was, it was one of the most fortunate things I have ever done, for it led to my associa-

tion with Colonel John Hay, who afterward became Secretary of State and, later, Ambassador to Great Britain.

"At that time, Hay and Nicolay were writing their 'Life of Abraham Lincoln.' Hay was in Cleveland and Nicolay was in Washington. Each would work on a chapter, then send it to the other to be gone over. Hay was doing all his writing without anyone to help him; and his wife finally insisted on his getting a secretary. I was fortunate enough to obtain the position.

"I think he paid me seventy-five dollars a month at the beginning. Later my salary was increased to one hundred dollars. But when I say that I was fortunate, I don't refer to the money I received. The great benefit to me was the association with a man of Colonel Hay's character.

"LIFE is a curious thing, isn't it? I had come to Cleveland intending to ship as a common sailor—a boy's idea of romance and adventure. Instead of this, I found myself in daily and hourly association with the most perfect type of American gentleman it has ever been my good fortune to meet; a man who quickly became my ideal of everything that was fine—literally 'a scholar and a gentleman.'

"Years later, when Colonel Hay was Secretary of State at Washington, I happened to be in that city and, in passing along a corridor in the Department of State, noticed the door to his office. I had not seen him for years. Meanwhile, I had become a very busy man myself; and, anyway, I knew he was busy and I was not inclined to intrude on his time. But on this occasion, acting on a sudden impulse, I thought I would stop and pay my respects to him.

"Going up to the negro attendant who was standing guard at the door I asked to see Secretary Hay. Immediately the colored man began to protest that it was impossible! The Chinese Minister was waiting, the secretary had other important affairs that demanded his attention, and so on and so forth.

"Now, look here!" I said to him. "I understand that it's your job to keep people from bothering Secretary Hay. And the reason I understand is because I once had to do that very thing myself. I was his protector then just as you are now. Here is my card. When you have an opportunity, lay it on his desk and tell him that I simply wanted to pay my respects to him.

"With that, I went on down the corridor. But just as I reached the turn I heard my name called, and I turned to see—not the darky, but the Secretary of State himself, running after me. He took me back to his private office; and the Minister from China had plenty of time to meditate on his mission, whatever it was, while Colonel Hay and I talked over old days together.

"That was the last time I saw him; and that little act of courtesy and friendliness only served to strengthen my early admiration of him as the finest type of an American gentleman.

Throughout the nation, the new and better Goodyear Cord Tires with the beveled All-Weather Tread have swept into deserved popularity

## NOW YOU SEE THEM EVERYWHERE

You have heard, of course, the good things now being said everywhere of the new Goodyear Cord Tire with the beveled All-Weather Tread.

These are reflected to us in the enthusiastic reports of our dealers, and in the flourishing condition of our sales.

If you look about you, you will see with what swiftness these new Goodyear Cords are finding favor; you see them everywhere, today, on cars of all types.

Behind this instant popularity, and the keen appreciation which underlies it, are these definite improvements in the tire itself:

**1** The new All-Weather Tread is made from an extraordinarily efficient rubber compound, by far the most serviceable that Goodyear engineers have ever devised.

**2** The powerful, clean-cut blocks are buttressed at the base by heavy circumferential ribs, knitting the whole tread design into a firmer and stancher unit.

**3** The blocks which line the tread on either side are beveled at the outer edge, relieving the carcass from the strain of vibration as wear proceeds.

**4** Other features in the tire are stronger unions between plies of the carcass and between carcass and tread; and heavier sidewalls which resist curb and rut wear.

You want this *improved* Goodyear Cord which other motorists are finding so superior—quieter, smoother-running, longer-lived and more economical.

You can get your size now at no extra price, from your Goodyear Service Station Dealer, who is pledged to help you get from your tires all the mileage built into them at the factory.

*Goodyear Means Good Wear*

## A good day after the night before

A GOOD day begins with a good night. That is why so many men, since 1881, have slept in Faultless Pajamas and Nightshirts.

Faultless Nightwear is cut to conform to the lines of the body. At the shoulders, elbows, wrists, hips, and knees, where the most room is needed, you will find Faultless more roomy and more comfortable. The sleeves and trousers are cut full length. The bottom, because of a distinctive Faultless way of reinforcing, "stay put."

The Faultless Cut makes Faultless Comfort. Have the body conforming curves of Faultless Garments insuring plenty of breathing room.

Made of exquisite fabrics, carefully chosen and exclusively Faultless. There is a Faultless garment to fit any pocket-book and any stature. Ask for Faultless Nightwear.

The Faultless SleepCoat—new and original. A pantless pajama, tailored like a coat. Exquisite in finish and fabric.

Pajamas, Sleepcoats, Nightshirts

"I was his private secretary for three years. My salary, as I said before, was by that time one hundred dollars a month and I was earning about fifty dollars a month doing outside work. But I knew that I was on one of those short ladders I spoke of just now. And, much as I liked being with Colonel Hay, I could not see any future for me if I stayed with him. When a young man finds himself in that situation, it is time for him to step off that ladder."

"Colonel Hay was a brother-in-law of Samuel Mather. Both had married daughters of Amasa Stone, one of the leading figures in Cleveland in the early days. Mr. Mather was in business. I wanted to get into business, too. So I asked Colonel Hay if he would use his influence with Mr. Mather to get me an opening. He did so. And I went to work as a clerk and stenographer for what was then the new firm of Pickands, Mather, and Company."

"Colonel Hay was a scholar and a diplomat, not a business man. Mr. Mather was; and as fine a type of business man as I have ever known. So you see how far-reaching was the good fortune I had in becoming associated with John Hay."

"I HAD been earning one hundred and fifty dollars a month. My new position paid me the not very munificent salary of only fifty dollars a month. Moreover, the firm was engaged in a new enterprise and was starting in a small way. They had only one room for an office; and the entire staff consisted of the two active partners and three clerks, of whom I was one."

"But to me the important thing was my faith in the men for whom I was to work! I am almost forty years older now than I was then, and I think I have acquired some business wisdom. But I never have had reason to regret the fact that I staked my future on the character and ability of the men who were, so to speak, building the ladder I had set foot on."

"If I were a young man I should be interested, of course, in the financial standing of any firm for which I worked: the amount of capital, the size of the business, and so on. But I should be more interested in the character of the men at the head of the business. Ability, integrity, and fairness inevitably attract capital and build up a business. I would cast in my lot with men of that type, and try to share in their growth. It would be sure to come if they were good executives."

"I don't consider any man a really good executive if he hasn't built up a loyal and efficient organization. On that score, at least, I think I can pass muster myself, for I have just that kind of an organization. And I have it because I am willing to give every man in it a chance to climb just as high as he can."

"I've had men come to me and say that they wanted to get on faster than they were progressing. When they say this I tell them to go to it."

"Make this desk where I'm sitting your goal!" I tell them. "If I'm not doing the best work that can be done in my job, somebody ought to take it away from me. Anyway, I'm not going to live forever. Nobody is. Pick out the best place in sight and go after it! Go after mine! You're bound to get something worthwhile if you do that. And I'll be glad to see you succeed."

"I try to live up to that," Mr. Coulby said earnestly. "I think it is a great factor in making any organization loyal and efficient. But the only way to give a man a chance is to let him show what he is capable of. Put him in a position of responsibility—and then let him alone. He never will find out what he can do, and neither will you, if you stand over him all the time, telling him what to do."

"When I have given a man certain duties they are his, not mine. I have my own to attend to. I don't try to run every job in the place. I don't smother myself in details. Not all executives work that way, I know; but it happens to be my way."

"How can you tell whether the men who attend to the details are doing it right?" I asked.

"How does a chauffeur know, when he takes out a car, whether it is running smoothly?" said Mr. Coulby. "If he is an experienced driver he can tell when anything is wrong with the mechanism. An executive is a sort of business chauffeur. He is, or should be, as sensitive to the way his organization is running as the driver of a car is to the vibrations of his engine, and condition of his tires, or any other part of the machine."

"But an executive cannot be sure how the men under him are performing their duties unless he knows by experience how those duties should be performed. I don't run around, peering at every man to find out what he is doing. But I know what he ought to be doing, for there isn't any work in this organization that I haven't done myself."

"It is the job of the executive, to go ahead and lead; not to get behind and push. And to do that successfully he must not let himself be smothered in details which he can hire men at a hundred and fifty dollars a month to do—perhaps better than he can do them himself."

"Someone told me, not long ago, that John D. Rockefeller once suggested to a subordinate of his that this man take a day off occasionally. The man protested that he couldn't possibly get away. Whereupon Mr. Rockefeller said, in his quiet, slow way:

"Well . . . I don't know. . . . If you took a day off . . . now and then . . . you might think up something . . . that would help the business."

"THERE was a good deal of wisdom in that, a wisdom especially adapted to executives," laughed Mr. Coulby. "A man can be so immersed in details that he hasn't time to study conditions and to make his big and broad plans. It seems to me that an executive should take a pretty permanent vacation from the details and give himself a chance 'to think up something that may help the business.'"

"Every employee can try to do this kind of thinking, even if he isn't an executive. He might spend some of his spare time going ahead along his own road and doing a little construction work. Somebody is pretty certain to find out about it and to give him a chance to do more and bigger work of the same kind."

"Of course I realize that it was an advantage to me to start with a new business which developed rapidly. Growing up with it, as I did, I had a chance to learn it thoroughly. Still, I didn't have to do this. I might have gone on being a clerk for the rest of my days."

"I have made another step up and am now advertising manager of the GRAND JUNCTION (Colorado) NEWS," writes an enthusiastic United Y. M. C. A. Schools' Student.

Two years ago he began devoting evening hours to the study of a United Y. M. C. A. Schools' correspondence course. He was not depending on pull or luck to get ahead. He believed that when he was qualified for a bigger job, the opportunity would come to "step up."

This Colorado student's letter is a fair specimen of hundreds that come to us.

It's not difficult to "step up" if you have ambition and the kind of training employers want. Will you let us tell you how you can move upward steadily by simply making use of your spare hours?

## BECOME AN EXPERT STENOGRAPHER AND SPEED TYPIST

A profession that offers men and women rich rewards, fascinating work, big pay, and opens the way for promotion to high executive positions paying \$50 to \$100 a week and up. Many of America's biggest business men and women get their start because they mastered stenography. Demand for expert stenographers and typists always exceeds the supply at salaries of from \$50 to \$50 a week. The Tulloss New Way makes you an expert, one who can start in at a large salary. Complete courses in shorthand and typewriting, new principles, insure exceptional speed and accuracy. You can write shorthand the new way 125 to 150 words a minute. You can typewrite 80 to 100 words a minute and with this speed, accuracy and ease of operation—no fatigue as with the old way. Remarkable methods—remarkable results. You learn faster the Tulloss New Way. No previous stenographic schooling necessary. Train at home during your spare time. Only about half cost—your will become a far more efficient stenographer—worth more money than the average right from the start. If already a stenographer you nevertheless need New Way training in speed typewriting, for no matter how good you are in shorthand, you can never expect the high salaried position until you get speed, real speed and accuracy on a typewriter. Quickly acquired in ten easy lessons. Will send you free our amazing book, "How to Be a Big Man's Right Hand." It tells how business men choose their private secretaries, how they advance them to executive positions. Send postal or letter and indicate whether you are interested in the complete stenography course or simply speed typewriting. No obligation—write today.

THE TULLOSS SCHOOL 530 College Hill Springfield, Ohio

"Some young men don't want responsibility. A nice smooth rut is a comfortable place to be, and they would rather stay in it than to get out and take the bumps on the open road. That's all right if it is what a man wants. But when he makes that choice, he oughtn't to blame anyone but himself if his rut doesn't take him to the heights reached by others—by those who chose the rough road that did lead there.

"Not that my road ever seemed a hard one to me. I enjoyed it. For one thing, work was not considered a penance or a hardship in those days. The men who grew up with the business along with me never counted the hours they put in. We used to work from the time we got up in the morning until we went to sleep at night. And we got up early and went to sleep late! Work was our occupation, our recreation, and everything else.

"In this way, I learned every phase of the business, from the clerical work in the office to the practical problems of handling the vessels. Many a time I have gone out with a wrecking crew to salvage a ship, or her cargo. Of course I don't do that now; but I know what the men who do have that job are up against. I know what every man in the organization is up against; because I have been there myself. I think that helps me as an executive.

"WORK is still my greatest interest in life, although I don't work as hard as I used to. A man slows up a bit as he grows older. At least he ought to, if he wants to stay on at his job. I'm not ready to part company with mine, so I keep myself fit.

"Some men worry along without health and yet accomplish big things; but I don't see how they can do it. Fortunately, I never had to try, for I've always been well and strong. That's another thing every young man should think about: his health. It may be the deciding factor between success and failure.

"A man 'rides on his stomach,' you know. It may seem rather humiliating to him to measure himself by his digestion, but he will have to do it, sooner or later. If it comes to a scrap between his head and his stomach, the stomach generally wins. I eat anything I want. I don't have to worry about it beforehand—and I never give it a thought afterward. But," he admitted with a smile, "it probably is because I don't want the kind of food that makes trouble.

"I never cared for elaborate dinners. I don't now. But even if I did like rich, unwholesome food, I wouldn't eat it. A man is careful about the fuel he puts into the engine of his automobile. But his own 'engine' is a million times more important to him. If he hasn't enough sense and enough self-control to take care of it, he needn't be surprised if it stalls and he becomes a tail-ender in the race.

"I don't know just how much a man can do to the brains he is born with. I believe he can do a good deal—both ways. He can develop them, or can let them become so run down and rusty that they won't do anything except creak. But almost any young man can improve his physique and take care of his health. If he doesn't, he marks up a big handicap against himself. For nobody—I don't care what his other abilities may be—can do the best work of which he is capable unless he has health."

AMERICAN STATIONERY

## Quality Note Paper for Vacation Correspondence

People who are accustomed to writing paper of fine quality are particularly impressed with American Stationery and its splendid appropriateness for informal and household-business correspondence. Such people—feeling the need of a simple yet tasteful note paper for vacation uses—order American Stationery for their summer homes as well as for their city residences. **Q** It is inviting in style, informal in character, convenient in size and carefully printed with name and address for use wherever you need note paper. **Q** This year use it on your vacation. And if you do not already have it in your home, by all means order a trial package today. We know that you will be pleased—surprised in fact—with its sterling quality.

200 Sheets ..... 100  
100 Envelopes ....  
PRINTED WITH ANY NAME AND ADDRESS

This comprises our "Regular Package" which is made up as follows and mailed postpaid. PAPER: National Bank Bond—clear, white, fine textured; exquisite writing surface. SIZE: Sheet 6 x 7; envelopes to match. INK: Name and address, printed as shown in illustration, in rich, dark blue ink.

For orders west of Denver and foreign countries, add 10%. Always remit with order. With the exceptional facilities of our large plant, all orders are filled with amazing speed. We have no agents or branch plants. All American Stationery is sold by mail from Peru, Indiana, where we, originators of this type of stationery, have successfully manufactured it for eight years.

## Save Fuel Keep Warm End Draughts

You will be surprised at the small cost of equipping your home or business building with Chamberlin Metal Weather Strips.

And they add so much to comfort, cleanliness and good household economy. They save 25% to 40% of fuel costs. Keep dirt, dust, soot and smoke from sifting in. That ends one of the most tedious tasks of housework.

### Why Heat Your Building 36 Times Every Day?

Tests show the inrush of cold air at unprotected windows and doors fills the average building 36 times daily. Why fight this with fuel?

How much more simple to bar it out as thousands of good home managers do, with Chamberlin Metal Weather Strips.

At 12,000,000 windows and doors Chamberlin Metal Weather Strips permanently end fuel waste and discomforts resulting from draughts. They make homes dust-proof. Protect hangings, furnishings and decorations. End rattling doors and windows.

Healthier homes result. Children are safe from cold

air currents. No cold spots. You are not driven from the bright, cheerful window by chill draughts.

**Free** Chamberlin Strips are used on 85% of all weather stripped buildings, including homes, banks, schools, office buildings, churches, stores, hotels and apartments.

They are guaranteed to last as long as the building. Any need for service or attention, no matter how many years hence, is cheerfully done free, by Chamberlin experts. An estimate by our engineering department, on the cost of your equipment, is free. Just send the coupon.

## From Stake Driver to Railroad President

(Continued from page 19)

"So I stuck."

"Sticking, coupled with hard work and doing the job I had at the time the best I knew how, is about the best explanation I can give for the fact that I went ahead, step by step.

"It was all very gradual. Promotions came slowly: from assistant engineer to chief engineer, to vice president, to president, with many gradations between, and with a long stay in each job. The advance was not dramatic, nor was it made up of a few big steps, but of many little ones. You ask me to say what I have learned about the process of achievement, and that is the first thing I would say: *Don't be nervous if you don't land in a big job overnight.*

"It takes time to grow up in business. Have patience.

"That applies to promotions, and to salary too. I want to emphasize that the pay is not the thing a man ought to be chiefly thinking of. What he should think of is the opportunity to show what he can do. Sooner or later the pay will take care of itself. Don't worry too much if it isn't sooner.

"I went from twenty dollars a month in the surveying party to the president's chair, and I never once asked for an increase in pay. And in time the increases always came. There were times when I was underpaid for the work I was doing. Would I have gone ahead any faster or got any further in the end if I had raised a rumpus about it? I don't think so. The adjustments were made in time and I never lost by my silence.

"I find men, though, who feel and say that they have been slighted. They grumble because they are not picked out of the crowd for advancement, while others are. And very often, if they stayed right at home with their grumbling and asked themselves *why* they were not picked out, and told themselves the straight truth about it, they would find the answer *not* in somebody else's oversight, but in their own failure to put the last ounce of energy into doing the job the best they knew how.

**A** MAN in the ranks in a big business is just a buck private. There is no reason why anybody in authority should notice him at all, unless he does his work very poorly or very well. I think I can safely say that very few of the men who are running big business enterprises, and very few of their chief subordinates, have a desire to slight anybody. Quite the contrary! They are much too anxious to find people who can and will take responsibilities and distinguish themselves at their tasks.

"Now suppose a man does just that. Presently, we will say, he gets a small promotion. Maybe he is given merely a job as a 'straw boss,' who is nothing more nor less important than a foreman's assistant. His pay is usually a little higher. That was the kind of job I had with the three Irishmen.

"Even a straw boss has a chance to

show whether he has anything of the leader in him. And here is the important point: By becoming straw boss he has climbed out of the ranks onto the official ladder. It may not be much of a boost, but his head does stick up ever so little above those around him. He is in a smaller group than before. There are not so many straw bosses. Therefore, the chance of his being recognized if he does good work is that much better.

"Suppose he presently becomes a foreman. There are, probably, not so many foremen as straw bosses. So he stands out from the crowd still more sharply. And as he goes on he finds himself with each new promotion a member of a still smaller group, with constantly more chances of being recognized for good work by those in authority.

**T**HAT is the way progress in a career takes place. It is what happened to me. The big thing is not to get discouraged and give up trying if you find you emerge from the crowd very slowly. Very often it is a long, long while before promotion begins to come at all rapidly. I know the president of one railroad who was in minor positions until close to middle age. I believe at forty he was still a station agent.

"Don't imagine that you can hasten your promotion by some stunt to attract attention. You can't. You might get *one* promotion that way; but you wouldn't be likely to get another, at least not from the same employer. You can't attract favorable notice by trying to out-talk the other fellow, nor by being subservient and licking somebody's boots. There's only one way: *That is by doing the job a little better than those around you, a little better than you are expected to do it.*

"You won't get instantaneous results even by this process, perhaps. When somebody begins to notice you specially, you are not likely to be conscious of his observation. Nobody ever came to me and said:

"Storey, we're watching you!"

"It follows from what I've said that hard work is the thing, and that's trite and old-fashioned. But you've sometimes got to be trite and old-fashioned in order to get up the ladder—old-fashioned enough, at least, to do your job the best you can do it, the best it can be done.

"I remember once when I was in charge of a location crew. We had been sent out in advance of a construction crew that was already in the field. Our job was to locate the line which was being built. And we had to do our job fast in order to keep far enough ahead of the construction people. They were constantly on our heels.

"During the day I laid out the work, told the men what to do, and supervised the doing of it. That was a full job in itself. But it didn't complete all I had to do.

"At night I went over the notes of the work we had done during the day, to get them in shape for the people behind us.

## What Are You Thinking About?

Day-dreaming led many a man to make plans that brought him big success. Don't be alarmed when your thoughts are wandering away, when you dream that you are a leader of men—a doer of big things in the business world—a builder of lasting structures. Your day-dreams are an indication of your ambition and of your desire to accomplish things. The man who never dreams has no imagination; he will not get very far. But you can make your dreams real—You can materialize your ambition.

Just dreaming alone won't do. Hitch your dreams up to facts and you will go far. You will get the facts through special training along the line in which you want to succeed. And the place to get just that training is the American School. This is proven by the quarter of a century of successful experience we have in helping many thousands of men and women gain an enviable place in business and social life.

Another reason why the American School is the place to get your training—it is not a business corporation but a Chartered Educational Institution, incorporated not for profit. Space here is too limited to tell you of all the advantages you will gain by getting your training from the American School, but the coupon will bring you full information and a descriptive book, without cost or obligation to you. Fill out and mail the coupon NOW, while you are thinking about it. No agents will bother you.

**Tires**—Parts, equipment—at half usual prices. Send no money. Write for remarkable factory prices and material terms.

**Mead Cycle Company**  
Dept. F-37 Chicago

That used to take me, night after night, until two or three o'clock in the morning. I went to bed then; but I had to be up again at six to start my men to work.

"That lasted for two months. I doubt if the people at headquarters knew what a hard job they had assigned me. But the point, as I saw it, was that they had assigned it to me, and it was up to me to do it. Otherwise they would have sent another man to take my place. Nobody is ever given a bigger job because he says his present job is too much for him!

"When that particular work was finished, they gave me a place that was a whole lot better. And I didn't have to work half so hard!

"No man can get on unless he really wants to get on. That sounds silly.

"Of course I want to get on," you say.

"But do you?"

"I have found that quite a lot of people do not want to get on, in this sense: They are unwilling to accept the responsibilities that come with advancement.

"There was a time when we had difficulty getting chief dispatchers. The run of dispatchers did not have to accept a great deal of responsibility, but their chief did. So men who had learned to be good dispatchers preferred to remain in their safe jobs, and we found that we were getting mostly young men, with less experience and ability, in the chief's position. At length we had to make a considerable difference in the pay of the chief dispatcher in order to make the job attractive to the men of longer experience. The chance to do important work—that by itself was not enough to attract many of them.

"So, before you complain because you don't get on, before you start to worry because you think you don't know how to get on, make sure that you really want to get on.

"And know what you are driving for. You will have to be a boss, an executive. That's one of the responsibilities you must accept.

"HOWEVER, the job of handling a thousand men is not fundamentally different from handling two. A straw boss can learn the method that the president has to use. I learned one of the most important lessons there is about handling men when, at the age of twenty, I took out the three Irishmen; namely, that a good boss doesn't try to do the work of his employees. He directs them. He leads them. But they have to do the work themselves.

"The greatest railroad man I ever knew had in a marked degree the faculty of handling men ably. That was Mr. Ripley, for many years president of the Santa Fé. He won the affection and loyalty of the men around him as few executives are able to do. I recall very well what he said to me when he made me a vice president. He remarked:

"Well, Storey, you see I'm fixing it so I won't have any work to do!"

"Of course I knew well enough that he had plenty to do—more than any of us. But I understood that was his way of letting me know that my job was strictly up to me.

"There is a knack in the handling of men which it is difficult to describe. Mr. Ripley had it. It is a twofold knack. It consists of the ability to tell others how to

# Little Mistakes In English Make Others Judge You Unfairly

Does your English reveal your lack of education or does it prove that you are a person of culture and refinement? English is the one weapon you must use every day. Here is how you can improve it almost at once.

SHERWIN CODY

You are sized up every day by what you say and write. The words you use, how you use them; your spelling, grammar, punctuation—these tell the measure of your ability, your experience, your breeding, more clearly than anything else. Your English says to all the world, "This is what I am!"

## How Poor English Hurts You

English is the advertisement of your ability. Your language determines your position in the social and business scale. Charming personality, fine clothes, wonderful appearance, count for little if handicapped by imperfect or "sloppy" English.

People will think you are lacking in education and culture if you spell incorrectly such common words as "business," "abbreviate," etc.; if you say "between you and I" instead of "between you and me;" if you use "who" for "whom" and "shall" for "will." What can you expect people to think if you don't know when to use one or two "e's" or "n's" or "r's," or when to use "ei" or "ie," or if you say "hospitable" when you should say "HOSPitable." Fairly or unfairly, everybody everywhere judges you the same way. Poor English is an unnecessary handicap.

## 15 Minutes a Day Perfects Your English

If your English does not make people think the best of you then it must be improved. Extensive tests show that most men and women are but 61% efficient in the essential points of English.

But now there is a way to improve your English. Sherwin Cody, perhaps the best-known teacher of practical English, has perfected and patented a remarkable device which quickly gives you a commanding mastery of English. He has thrown aside all the "junk" which makes the old methods so inefficient. The drudgery of rules and tiresome drills are discarded. Each evening you are assigned an easy 15-minute lesson. No time is wasted on what you already know. You are quickly shown your mistakes in spelling, punctuation, grammar, and pronunciation, and you concentrate on the points that need attention. By actual use correct English soon becomes a habit.

## Astonishing Book on English Sent Free

A polished and effective command of English denotes education and culture. It wins friends, and makes a favorable impression upon those with whom you come in contact. In business, as well as in social life, correct English gives you added advantages and better opportunities while poor English handicaps you more than you will ever realize. And now, in only 15 minutes a day—in your own home—you can actually check up and see yourself improve by using the 100% self-correcting method.

If you are efficient in English it will give you greater confidence; if you are deficient you surely want to know it. For this reason Mr. Cody has prepared a simple 15-minute test which you can take in your own home. The correct answers are given so you can tell at once just where you stand. Write today for this test—it is free. We will also gladly mail you our new free book, "How to Speak and Write Masterly English." Merely mail the coupon or a postcard. Free yourself of the embarrassing errors in English that make you feel ill at ease. You can never achieve your greatest possibilities until you master English. Write today.

## What Everyone Should Read

(Continued from page 25)

enlarging personal contacts; it is by reading the writings of anyone who writes with force and sincerity upon questions that hold one's interest, clarify one's ideas, and open out new vistas. No one can cover, nor need cover, the whole range of literature; for one of us Voltaire or his modern equivalent, Bernard Shaw; for another Plato or James Harvey Robinson; for another Ruskin or Bertrand Russell—purposely I quote incongruous names—may be revelation. I mention these writers haphazard; the last two named I cannot read at all, but I know and look up with the profoundest respect to men to whom they are founts of living water. Everyone should read what lays hold of his or her mind, ancient writings or modern, praised writings or banned writings. And having found a mind responding to one's own, then, I would say, get everything you can by and about and against that writer, and make his or her inmost thought and quality your own possession.

IF I were asked to name any specific books that everyone should read I doubt if I should name any except the Gospels and Plato's "Republic." I name the former because I do not think they are read nearly enough as books, or at least—how shall I put it?—familiarly and fearlessly enough. Many people still read them as magic books or oracles. They get them mixed up with a lot of theology. They miss the reality that in these Gospels someone is telling them something very plain and great about the Kingdom of Heaven and the Fatherhood of God.

Everyone should read these books as books, and try to get hold of these ideas, because they are sound fundamental social and political ideas, and while they mean nothing more than remote pious phrases to you you cannot possibly run a business righteously or invest money righteously, or cast a proper vote. Any public policy that does not aim at the union of mankind in the Kingdom of Heaven under the Fatherhood of God is ultimately foolery and a way to death. And Plato's "Republic" I name because it releases the mind from all sorts of conventional and traditional views about human institutions. It is not all easy reading; there are pages of what we may reasonably call "logic chopping," which many readers will be well advised to skip, but the substance of the book is of quite unusual interest and value.

You will note that, so far in this account of what everyone should read, I have not even mentioned Homer, Virgil, Shakespeare, Milton, Goethe, or any other of the great names that are so much imposed upon earnest young people as inevitable. I should say "Try them." But you may find all these great writers dead and flat to you, and that may be not your fault but just your difference.

Let me be frank about these overpowering names. They are rammed down people's throats; they are forced upon the young; there is need of protection against

## He has regaled our palates

## —has he also ruined our teeth?

THE CHEFS of France have had a tremendous influence on American food. They have taught us how to delight our palates, but they have almost ruined our teeth!

Teeth need work and gums need stimulation, and with this creamy modern food of ours, there is neither work for the teeth nor stimulation for the gums.

### Trouble on the increase!

Consequently, teeth and gums are today less robust. Trouble from both is on the increase. The prevalence of pyorrhea is one item in a long list.

Thousands of dentists have written us to tell how they combat soft and spongy gums by the use of Ipana.

### The use of Ipana

In stubborn cases, they prescribe a thorough gum-massage with Ipana after the ordinary cleaning with Ipana and the brush. For Ipana Tooth Paste, because of the presence of Ziralol, has a decided tendency to heal the soft gum and to keep the healthy gum firm.

Ipana is a modern tooth paste formulated with an eye to the welfare of your gums, whether they give you trouble or not, and in addition it is a tooth paste of remarkable cleaning power and unforgettably good taste.

them. There is no reason why people who do not or cannot read Homer or Shakespeare should be bullied out of their intellectual self-respect.

Shakespeare bored Darwin dreadfully in his later years, and the great naturalist was man enough to confess it. For quite other reasons Shakespeare may bore or displease you. There is no need to be ashamed of it. Personally, I cannot have too much of Falstaff and Juliet's nurse and the players in the "Midsummer Night's Dream," but many girls and women find these characters coarse and unpleasing. On the other hand, I find Juliet's love-making about as delightful as the squeak of a passionate slate pencil. It is known that not all the plays ascribed to Shakespeare are by him, but all those enthusiastic men of letters who talk in such a ravished way about his inimitable quality differ interminably about what he did or did not write. There is an enormous literature about the play of Hamlet and what it is about. A play that puzzles people like that is not a supreme work of art at all; it is a failure or an inexcusable riddle. People cannot even make up their minds whether Hamlet is mad, or shamming madness, and the whole play has the effect of being written by a man tired of or unsympathetic with the gory plot he has chosen.

Not only is he tired of his plot, but he is bored and irritated by his world. He breaks away, as one is apt to do under such circumstances, into digressions and artificial and secondary issues. It is these incidental outbreaks that give the play of Hamlet its value—for those who appreciate its incidental outbreaks. There is a vigorous attack on contemporary actors, and Polonius is pretty plainly a caricature of Sir Francis Bacon. Shakespeare did a considerable amount of jeering in his plays and manifestly had an unloving eye for many of his contemporaries.

IT IS really very distressing to think of the endless aspiring self-educators who must have been bogged and lost in utter despair by the forcing of unsuitable and uncongenial masterpieces on their unprepared minds.

Great art exists for joy. The joy in literature, like the joy in music, is its only justification. There is no justification at all for the toilsome, industrious, joyless reading of "great" literature. There is no poetry, no work of literary art, that I would say everyone should read it. Written and made poetry is not necessary for everyone. There are many who can take the grandeur of history, the splendor of the stars, the majesty of natural law, the ripple in the water, and the beauty of a flower without the help of the poet. There are others who derive an added pleasure from the nightingale in calling it "Philomel" and who will drown the song of the lark on a golden afternoon by reciting Shelley—manifestly because they prefer Shelley to the lark. But there is no ground for shame in the fact that you can see without literary spectacles.

Should everyone read some fiction? I do not see the necessity. We live nowadays amidst an enormous accumulation of novels and with constant additions to the heaps. A very large proportion of the novel reading that goes on is mere perversion of reading, a vice. The books are

read, by youths and maidens more especially, as opiates, as a cheap evasive substitute for experience; often they are read with such inattention that if the book is taken from them suddenly they can hardly name its title or its characters; such reading is really a life-wasting habit of assisted reverie.

Not all such stories are ill-written. Such elaborate and careful writers as Robert Louis Stevenson and Mariott Watson ministered in their time to this indolent misuse of the mind. So did Sir Walter Scott. I do not think there is much more to be done with "Waverley" and "Ivanhoe" than a puerile sympathetic dreaming. But that does not apply to another and a graver type of novels. The novel has always been made a vehicle for the criticism of life and institutions, and for the expression of new ideas about conduct. It has never been purely a work of art, except in the imagination of a few pedantic critics and writers; it has always been aggressive. The true novelist tells you what he thinks about people and things as plainly and vividly as he can. Fielding and Smollett were conscious critics of life; the succession comes down through a long line of polemical commentators upon existence to the "Forsythe Sagas," and "Mr. Prohacks," and "Babbitts" of to-day. Just in so far as novels help his questionings, a man should read them. But I do not think that everyone should read them, and certainly there is no one novel at all that everybody should read.

SO THAT, after I have sifted this question out, I am left with this—that "Everyone" should read habitually and much; that there should be a framework of universal history and some general ideas about the universe, and that these are to be frequently refreshed by reading new-found books and comparing them with the old; there should be the Gospels and Plato's "Republic" and, for the rest, steady and intensive reading of biography, of discussion, of the sincerest sorts of fiction, along the line of the individual reader's interests and curiosities. Everyone should have that much in common and have that much difference; the general history, the great message of brotherhood and the kingdom of heaven, the release from mental subservience to established institutions, the recognition that all the world's affairs are matters of will and reason, these things "Everyone" should read, for these things are needed to form the basis of a common will and understanding in that reconstruction of human law and order that goes on to-day; and beyond that, within that framework of the great adventure of the race, "Everyone" should, to the best of his powers and opportunities, pursue his own individual interest and read what he can and as much as he can.

## Two Typographical Errors

TWO typographical errors were made in Mr. Wells's article last month: "The Ten Most Important Books in the World." . . . On page 88, the word "Judaism" appeared. "Justinian" was the word that Mr. Wells wrote. In the second line of the first paragraph, beginning on page 94, the word "moving" should have been printed instead of "mooning."

**"Of all books the least wearisome to read."—Stevenson**

**D**ID you ever think of an atlas in that way? Did you ever realize what fascinating reading maps are and how they can make all other reading more interesting and intelligible?

Just try it. Have a RAND McNALLY map or atlas at your elbow as you read. From the yarn of travel, the chapter of history or the daily news story turn to the map. On it trace the course of the events you are reading about. See how they live for you as they never have before! How much more understandable they are!

The whole wide world lies before you on a map—mountains, rivers, highways, railroads, cities and villages. With a good map you can travel anywhere, though you sit at your own fireside. You can cross the oceans on your favorite steamship, visit all the cities you have dreamed about, and push on to the most adventurous and unheard-of places.

But a map is not like other "books." It cannot be once printed in complete and finished form for all time. It must be ever-changing, as the world is ever-changing. It must show all countries as they are to-day, new boundaries, new cities, roads and railroads—else it tells you untruths.

Make sure, therefore, that your map is up-to-date and authentic. Without question it will be—if it is published by RAND McNALLY & COMPANY. Whether pocket map or wall map, globe or atlas, every RAND McNALLY publication is as true as it is humanly possible to make it. To make sure of getting the best in maps for any purpose, you have only to depend on this guarantee. You have only to look for this name—

### What Do Your Children Do Behind Your Back?

When school is over and your children are out of sight, where are they—what are they doing? What do they read? Are they becoming constructive, thoughtful—or merely drifting—into bad habits, possibly?

You may do everything possible. But you alone cannot train them as you would like to do. The problem needs specialized attention—needs the regular, systematized help of an organization famed these fifty years for its influence on the youthful mind.

St. Nicholas Magazine is the medium through which this organization does its work. On its staff are the world's best writers of juvenile fiction, essays, history, articles on science and nature and sports—all skilled in the art of leaving helpful, wholesome thoughts with their readers. Prize contests in drawing, photography and writing develop talent.

#### Costs Less Than Daily Paper

One year's subscription is only \$4—about half the cost of your morning newspaper. And in all the world, you can find no better way to spend \$4. Send check or money order to St. Nicholas Subscription Department, W-2, 353 Fourth Avenue, New York.

Thirty-five cents per copy at all news-stands

**ST. NICHOLAS**  
for Boys and Girls

## Ad Writers WANTED

Demand for ad-writers far exceeds the supply. Three positions to every man who can write ads.

**\$100 TO \$200 A WEEK** No profession pays better than ad-writing. Few pay so well. \$100 a week is not an unusual salary for an ad-writer. Scores receive \$200 a week and more! Yet there's no magic gift required. It's mainly a matter of training. One of our star ad-writers was once a \$25-a-week bookkeeper. Another, a printer. Another, a shipping clerk. Why don't you take up ad-writing? Page-Davis Ad-Men will give you instruction you need—all by mail. They will teach you every phase of the work—laying out ads, writing headlines, describing products, selecting type, choosing illustrations, etc. Page-Davis training means competency, and recognition as such!

### 6 TRY-OUT LESSONS FREE

See how good an ad-writer you would make. Try your hand at working some sample ads and compare your work with that of men who are earning \$200 to \$300 a week. A full set of six try-out lessons in ad-writing absolutely free to you on your simple request. Nothing to pay now or later. No obligation whatever. Write today for these free lessons and try your skill at laying out ads, suggesting headlines, type and illustrations. You may have more ability as an ad-writer than you think. More than one beginner does work that astonishes himself.

**NOW!** We offer these six free try-out lessons to improve the popular theory that ad-writing is a "gift." Also, to give you an idea of the character of Page-Davis instruction. Only one thousand sets of five lessons to be distributed; so prompt action is necessary. Write today for your set. Best postpaid and free with our catalog and full particulars of our course. A letter or postcard brings everything. Write today—NOW!

PAGE-DAVIS SCHOOL, Dept. P-25, Chicago, Illinois  
"World's Leading School of Advertising"

## Human Nature as Seen by a Country Editor

(Continued from page 29)

of my newspaper. I printed the story.

I say that is the hard part of the game; one's friends are always getting into hot water. A man who has done me many a good turn was accused of a sensational crime. Investigation of the facts convinced me that he was not guiltless. He went to the penitentiary declaring that my newspaper could have saved him.

I sometimes think that a newspaper man should have no friends; he certainly should be under no fast obligation to any man who is in a position to abuse his friendship. Nothing disturbs me more than a friendly politician. Your political friend always expects you to remember his friendship, and he will purposely compromise you by loading you with favors. Not long ago I criticized a certain dignitary for his conduct in office. He lost no time in reminding me that it was his influence with the governor of the state that had got me a certain honorable commission, and that I was therefore an ingrate. I immediately sent my resignation to the governor, and told him why.

But one does not lose every friendship by printing the news where friends are involved. People are slow to forgive ridicule and slow to forgive abuse, but deep down in their conscience they respect the most terrible statement of the exact facts in any case—even about themselves.

A newspaper man who fairly and fearlessly prints the news has this decided advantage over the spineless, wishy-washy, apologetic publisher who doesn't: the former is respected by the enemies he makes; the latter is often held in contempt by the friends he thinks he makes.

THE more you do for the average small-minded person, the more he expects you to do for him. The man whose business you have boosted most, who has been favored with yards and yards of free publicity, is the first to turn against you and becomes your most bellicose enemy when you write something that offends him. You have unconsciously so elevated him in his own opinion of himself that he thinks you are everlastingly indebted to him for the space he has received in the columns of your paper.

The great rank and file who buy and read my paper, buy it for its community newsmess. Everybody likes to read about himself and about his neighbors. I try to write everything so that every reader can visualize the thing I am writing about. The average human cannot successfully visualize anything that he can't put himself into.

I am also compelled to set down the observation that the average reader is forgetful and not any too well stocked with exact general information. He isn't usually interested in formulas, statistics, or any serious matter. He wants to be entertained, and finds more interest in a comic strip than in the doings of an American Ambassador to the Court of St. James.

I never assume that the average reader has a great deal of information about anything. Sometimes I am called clever when I only write in terms that the humblest citizen may understand, and build word structures that are intelligible to a child. People are inclined to think they are real bright when they understand a thing. I endeavor to keep them forever congratulating themselves upon their cleverness.

But when errors creep into print it is next to impossible to make people understand. There have been some funny ones in my paper. There were several cases of ptomaine poisoning in town, believed to have followed the eating of oysters sold by a nondescript peddler. A local oyster dealer seized upon the opportunity to advertise. He had in his employ two negroes, who peddled his oysters from house to house. One of them was known as Long Sudie Turner, because of his height; the other was known as Short Charlie Mitchell, because of his lack of height. The oysterman advertised: "If you want to be sure of good oysters, buy them from Long Sudie Turner and Short Charlie Mitchell."

The fool printer set the ad up to read: "If you want to be sure of good oysters, buy them from Long Sudie Turner and Shoot Charlie Mitchell."

Charlie Mitchell was the best oyster shucker and peddler in town. But when someone showed Charlie the paper with that garbled ad, Charlie left his bucket of oysters on a customer's doorstep and sent word to his boss to get another peddler. Charlie Mitchell hasn't peddled an oyster since, and I have never got another advertisement from that oyster dealer.

ANOTHER queer thing about human nature is that almost everybody likes to see someone else roasted. People even register delight when the subject of the roast is one of their own friends. I once wrote and published an attack upon a candidate for Congress in my district, holding him up to ridicule in a most ridiculous way. He was a likable fellow and highly popular with his own townsmen. Standing by the window in his office he observed people—mostly his friends—everywhere on street corners and in doorways reading the attack upon himself and laughing over it. He has never had the same respect for human nature since.

I have observed repeatedly that people generally enjoy a good-natured or clever roast. I have also observed that humans usually laugh at the poor devil who slips on a banana peel or unwittingly forms a posterior contact with a carpet tack. And I have also observed how reluctantly bystanders interfere when two men attack each other with fists. Human nature likes a scrap.

The rural reader especially likes spice and vinegar. The average farmer has a notion, not altogether ill-founded, that the world's against him, and he likes to see someone else on the grill all the time. Country people always like to see some town fellow on the grill. They gather on the front porch or around the stove in the cross-roads store or country post office and chuckle and laugh over any piece in the paper that "gives some town fellow what's coming to him." But when you point out some error or transgression of these same country people, they are

## NEW Butter-Kist Machine Brings BIG Profits from SMALLER Investment!

**B**UTTER-KIST now offers a new and wonderfully improved line of Popcorn Machines with the right model, exactly suited to the requirements of your own business.

And best of all—there's a beautiful, brand-new model that sells at *half what former models cost!*

It's the Gold Mine—and it's a beauty. Mahogany-finished cabinet—gleaming glass sides—polished nickel parts. Takes up little room. Works automatically. Produces thirty 10-cent packages an hour. Has special compartment for peanuts—a chance for added profits.

A better machine in every way! Pops more corn at same cost. And pops it *under glass*. No springs. Noiseless. Every part interchangeable. New and improved revolving electric sign.

Butter-Kist Popcorn can make big profits for you. H. C. Wallace writes: "In one year we made a gross profit of \$3484". Many are making even more. And remember, out of every dollar's worth you sell, you keep 65 cents as your profit!

The Gold Mine Model is your opportunity. Write for the Butter-Kist Easy Payment Plan. Mail the coupon.

slower than the feminine sex to forgive.

It takes the average farmer as many years as he lives miles from town to get over anything in the paper that personally offends him. A townsman will sometimes come around in a fortnight, a month, or a year; but Hiram Cornstossel gets it in for you, and nurses his grudge for a decade. And I reckon if I had to live in a lonely house away from the road, without electric lights, without plumbing; get up at five A. M. and feed some pigs; chop some wood and hitch a pesky mule to a plow; wrestle with stumps and weeds and drought and corn-borers and cattle ticks and cotton-boll weevils, I say, I guess if you and I had to get right down and grapple with the same hard facts of life that a farmer grapples with, and nobody to blow off to except an overworked wife who wouldn't stand for it a minute; I say, I guess we would nurse almost any sort of a grouch a long time, too.

Women are always keen for the editorial hot stuff; a woman likes to read anything that rips a man up and down the back—just so long as it isn't *her* man. Women are always my staunch supporters when I speak what I think about men. But beware of the same free use of speech applied to womankind! The average woman cares little what you say about some other woman, but when you jump on women as a class—well, that's different.

**EVERY** school of journalism and every journalistic owl I ever knew banks on the idea that the most important thing in the publishing of a newspaper is to put everybody's name in the paper. I do not think that is so important as it is represented to be. People want news, and what may be news to John Smith because it is about John Smith, may be so much piffle to everybody else. The average man is quite as interested in identifying himself in the news and editorials as in seeing his name spelled out with so many letters. Here is what I mean:

There are two dozen men on the directorate of a certain bank. Every one of them feels a thrill of pride and much personal satisfaction when the paper tells in a newsy, entertaining way of some worthwhile thing the bank has done. It's his bank.

There are eight hundred or more members of a certain church, the names of not more than a score of whom enter into the news of my paper in a year; but every one of that congregation of eight hundred and more reads himself or herself into every nice thing said about that church.

This is not arguing that people do not like to see their names in print. There is a large class that is forever seeking personal publicity, losing no opportunity to shove their names into print.

My paper has a considerable circulation among the negroes of the town. The news of the negro population seldom gets into the paper; but what is quite as much appreciated by the negro as seeing his name in print is the fact that here is a newspaper that treats his problems sympathetically and, in a larger way, recognizes his economic, legal, and social rights, and his value to the community.

I find men more eager for publicity than women and much more vain, but women are more appreciative of their pictures in the paper—when they take good pictures.

Mellin's Food Co., Boston, Mass.

I publish every woman's picture I can get hold of, because a woman's picture gets reactions that a man's never does. Every man will study the picture of a good-looking woman; the friends and admirers of the woman are always pleased, while others are envious. No man ever asks me whose picture will I publish next, but women do ask me that question frequently. The only woman who ever raised a row with me for publishing her picture was my wife; and I discovered later that she kicked only because she feared someone would accuse her of having published it herself.

I find the hardest customer of all the human stock with whom I deal is the type which J. Lothrop Stoddard has fitly designated as the Under Man, sometimes called the Under Dog. The Under Dog is often an ungrateful beast, quick to turn upon his benefactor and rend the very hand that would help him. The world has run ahead of him and he can never catch up; the burdens of civilization rest heavily upon him, and he does not understand why; he is ever resentful, ever distrustful, ever suspicious, usually sullen, and often an ingrate of the most disappointing kind. You cannot lead him except by appealing to his basest instincts or exploiting his ignorance. I have fought his battles for him and sought to improve his working and living conditions, and seen him chase off after a demagogue who gave him only a drink of cheap liquor and a lying promise for his vote. It might be different if one could get right down in the gutter with him, but I have been so everlastingly busy keeping out of the gutter myself that I haven't had the time or the inclination to stop in the gutter with the other fellow; like the majority of humans I have tried to save my own bacon first.

THE Yellow Journalist thrives upon the Under Man; sincere men are crucified by him. It was the ignorant, unimaginative, landless, thriftless, drifting class that thronged the plains outside the gates of Jerusalem, and surged and howled around the uplifted cross on Calvary. Jesus, knowing them by intimate association, offered up the greatest prayer that ever fell from lips of mortal man or immortal God. He said: "Father, forgive them, for they know not what they do!"

One of the first things a country editor learns about human nature is that free humans will not be driven. A newspaper man who tries to reform everything and everybody by wielding a lash or a club is slated for a lot of disappointments. The "roast" may be the most entertaining, the most attention-compelling, and, often, the most popular weapon an editor can use, but it is the least effective. The public has a way of considering even a consummate scoundrel sufficiently punished when he has been sufficiently abused.

I have found out that the best and most effective way of bringing about a reform, or starting anything new under the sun, is to let the public discover for itself that it wants the thing. People usually get what they want when they want it enough. When a few influential individuals in a community become interested in a thing and are saddled with the responsibility for it, they will move heaven and earth for it, because it is *their* scheme. There is just that much egotism in almost

## Unexpected Guests!

It sometimes happens, and it's sometimes embarrassing. But you can always be on the safe side with something suitable to serve, if you have Kraft Cheese (in tins) on the pantry shelf.

Kraft Cheese (in tins) is such a convenience; so many ways to serve it, that the prudent housewife will never be found without it.

Neither heat nor cold can harm Kraft Cheese (in tins). Take it anywhere, serve it anywhere. And it's as pure and as fresh when you serve it as on the day it was sealed in the parchment lined tin. The rich mellow flavor is always the same. There are eight kinds.

No rind—it spreads. No waste—100% cheese.

every man, that he considers his own ideas of paramount importance.

The next most interesting things are money and love; one or both of these being the objective of every normal adult human being. But a funny thing about human nature is, the very ones who most eagerly devour anything about anybody who is successful in the pursuit of money are the most eager readers of every news item that relates an unsuccessful venture in love. A breach of promise, a divorce, or a sex scandal invariably booms street and news-stand sales.

I have said that the predominant trait of human nature as I find it is selfishness. The world is running on selfishness. A polite word for the same thing is individualism. Ours is an individualistic society, in which every individual is responsible for the upkeep and welfare of himself and his household. His community is the family 'neath his own roof. His first concern is to look out for himself and for those immediately dependent upon him. And there is no ignoring the fact that if he doesn't look out for himself he will fare badly indeed, for no one else is going to look out for him; and the State isn't going to care for his loved ones when he is dead.

THE fear of illness, unemployment, old age, poverty, and premature death steels many an otherwise magnanimous heart and makes otherwise noble men appear as so many niggardly, miserly, grasping creatures, devoid of idealism, devoid of humanitarianism, and devoid of any philanthropic impulse. In some great catastrophe, shaken out of themselves and given a new deal, the true nobility of human nature asserts itself, and the most commonplace men emerge as heroes. I personally know a lot of accredited heroes, and they were just Tom, Dick, and Harry before they got a chance to show the stuff they were made of.

Viewed solely in its everyday business relations, human nature often makes a sorry spectacle—every man crowding every other man for place, and the successful ones attaining the greatest successes by exploiting their weaker brethren. But only ignorance is vicious and intolerable. More and more each day, seeing human nature revealed through the grind of the local news of this small town and its environs, I am not permitted to be a pessimist very long at a time. All the badness in the bunch is the result of an enforced selfishness. Everybody would be more kind, more helpful, and in every way more beautiful if everybody had more time to know one another and know life values. Human nature suffers much for lack of leisure, and its failure to date to organize and make the most of the leisure that it has.

"THE World Makes Way for a Man Who Knows Where He is Going" is the subject of a remarkable business romance by Merle Crowell that will appear next month. It is the story of a man who had no definite goal at the age of twenty-nine. Then he examined himself honestly and thoroughly, laid out a bold course of action—and to-day, at forty-two, he is one of the outstanding figures in the life-insurance world.

# Corns

## Lift Right Off

Drop a little "Freezone" on a touchy corn or callus for a few nights. Instantly it stops aching, then shortly you lift it right off. Doesn't hurt a bit.

You can lift off every hard corn, soft corn, corn between the toes, and the "hard-skin" calluses on bottom of feet. Just get a bottle of "Freezone" at any drug store, anywhere.

Edward Wesley and Co., Cincinnati, O.

## Timothy's Last Joke

(Continued from page 40)

"I had dinner at home; Mother had one of her spells. You can dock me half a day—"

"Your mother's worse?"

"She'll get along. I—I've a woman in to take care of her now. But Fay—"

"Dean Mackie, you sure you're tellin' me the truth? You're shieldin' her, with that innocent look!"

"I saw her polishin' things up around the kitchen," he admitted, "and then she went—out for a bit. But say,"—the boy's mouth suddenly matched Agatha's in its grim repression—"even if Fay had a habit of confidin' in me, which she ain't, do you think I'd tell all I know, with you standin' ready to give her Hail Columbia?"

They measured each other with open antagonism. "Reckon I can wait!" snapped Agatha.

Dean bolted his food and left the house.

"Irresponsible . . . always was," Agatha said to herself as she cleared away the dishes. "She'll be driftin' in any minute."

But Fay did not drift in. Finally, Agatha took a lamp and climbed the stairs to the girl's room. The room was untidy, with bureau drawers half open and clothes strewn about. It had been the scene of a hasty packing. Yes, Fay's suit case was gone, the closet was half empty of clothes! Agatha stared stupidly at the pink silk dress, which hung in its accustomed place. Fay had taken only her oldest things. What could it mean?

AGATHA sat down limply. What was it Fay had said: "Why do you hate me? You'd be happier alone, wouldn't you?"

Where had Fay gone, then? Perhaps to her grandmother's beyond Ithaca! Agatha clutched at the solution with relief, convinced that she had hit upon the right explanation. "And why shouldn't Fay's grandmother, her own blood relation, share the burden?" Agatha argued. Timothy, she owned with a little twinge of conscience, had been even closer to Fay, somehow, than that maternal grandmother.

Suddenly Agatha realized that at last her wish had come true—she was alone!

In the living-room, Agatha sat down to the luxury of a solitary evening. No longer to have to steel herself against Fay's outbursts of merriment! Just there, against the crocheted doily, Timothy's head had always rested. . . . Agatha closed her eyes to recapture the vision of Timothy smoking his old brier pipe there beside her, but somehow she failed, and she was appalled. Could it be that she was already forgetting him? What was that little joke on the minister that Tim had loved to tell? Timothy refused even to chuckle for her!

She pressed the balls of her eyes; she was tired, that was it. Fay had probably made the four-ten local . . . she might at least have left a note, after all they'd done for her! Doubtless she'd be writing Agatha to send on the rest of her clothes.

At breakfast the next morning Agatha announced to Dean that Fay had gone on a visit to her Grandmother Scott.

"That so? You—heard from her?"

## "Old Town Canoes"

## THE JOY of a Really Fine Canoe

AT the foot of the float is tied a canoe—an "Old Town." It rests on the water, buoyant, graceful, inviting.

Your first impression is one of beauty. The gunwales and decks are of rich, red mahogany. The trim is an artistic pattern running from bow to stern. Lights and shadows play over the highly varnished surface.

You step in. Lightly, you dip your paddle, and the canoe moves easily over the surface. Deeper thrusts, and you speed along, noiselessly, tirelessly.

Then you realize why the "Old Town" is the finest of all canoes. The trim Indian lines make for speed combined with steadiness. Every "Old Town Canoe" is patterned after a real Indian model.

An "Old Town" will last you for years. It is the best made, lightest and lowest priced of canoes. \$54 up from dealer or factory.

The new 1923 catalog shows all models in full colors. Write for one to-day. It is free.

**OLD TOWN CANOE CO.**  
365 Middle St., Old Town, Maine, U. S. A.

## Hair Stays Combed, Glossy

**Washington School of Art, Inc.**  
Room 1995, Marden Bldg., Washington, D. C.

Agatha ignored the question. Dean relapsed into silence, but he choked on a scalding mouthful of coffee and Agatha caught him looking at her curiously.

She wrote a letter to Fay's grandmother to verify the girl's whereabouts. Having posted the letter, and calculated that an answer should come through in three or four days, she busied herself with household duties.

Gloomy enough meals these days. Dean seemed to have lost his appetite, and was anxious only to be through with the form of eating, and to get away. Agatha asked him about his mother and attempted, almost wistfully, to make a little cheery conversation.

"Getting along," he answered brusquely. "I'll just run over and see her, take her a bit o' broth—"

"No! Visitors . . . upset her. Sorry."

In spite of the rebuff, Agatha owned in fairness to him that Dean Mackie was not a bad boy: industrious, notwithstanding the poverty of his own barren little farm, and good to his mother.

But Agatha was not at peace. The house was appallingly empty. She missed Fay's clatterings in the kitchen, her little explosions of song. It was a "Good miss," Agatha insisted . . . but no, it was an ache.

And the worst of it was that Timothy had never been farther away from her. It was as though she needed Fay's laugh about the place to hear Timothy joining in.

ON THE fourth morning after Fay's abrupt departure Agatha awoke with a faint touch of sciatica. She had been overdoing. The housework on the Brant place was too much for one woman! In view of the fact that Agatha was usually something of a stoic about her sciatica it was odd how rapidly that one little twinge of pain assumed large proportions. All the sign posts pointed one way: Fay must come back!

After all, Fay was young, and the Brant place was rather dreary of late. A party, perhaps—Fay and Timothy had always hankered for a party.

Perhaps Agatha had better go after Fay herself, make sure of her. There should be a letter in the morning mail.

The letter came even as she had foreseen; Agatha glanced at the postmark, eagerly ripped it open. It was all working out just as she had planned!

Dazed, she spelled through the prim, Spencerian handwriting a second time; Prudence Scott—"Mrs.," in parentheses—begged to state that she had not seen her granddaughter, had had no word from her.

But what did it mean? Overwhelmingly, the truth rushed in upon Agatha. Fay had disappeared—the way a girl from Interlaken had disappeared. The girl's body had been found later! Dean! Where was Dean? She remembered he was late again, had not come for breakfast. . . . No time to wait for him! Tremblingly Agatha hitched old Jerusalem, urged him to town. The ticket agent! Why hadn't she thought of him before?

No, positively Sam had sold no ticket to Fay Brant.

No one had seen Fay! The village people seized upon the possibility of a mystery with gusto. "How long had she been gone? . . . Off to the city on a spree," winked facetious old Jep Thompson—"Young people!"

Agatha turned on him. "I'll have you know my niece is a girl o' responsibility." The sheriff reassured her; they'd send out inquiries, post the countryside. Had Mrs. Brant a good clear picture; and what was Fay wearing when last seen?

Cold and grim on the outside, but shaken and worn-out underneath, Agatha at last turned home. She told Dean; she supposed he was feeling something of what she felt, but she was hardly conscious of him. A day, two days, dragged by.

Alone in Fay's room, Agatha broke down. She would have given a good deal to hear Fay's ripple of care-free laughter, and acknowledged it humbly, shamelessly. She fingered the stuff of Fay's pink dress, and thought of the soft crimson silk shawl that Timothy had given her when they were married. She had stowed it away in tissue paper! . . . Fay would love that shawl. If she could only have another chance. . . . Agatha wiped away acid tears, took herself firmly in hand.

In those few days she grew old, and tighter-lipped than ever, and Dean Mackie noticed it. "Look here," he said impulsively, "you're taking it too hard. Maybe Fay'll turn up to-day!"

"You don't know anything about it," muttered Agatha. "Reckon you don't care much about her—really."

"No?" Dean's voice was strange. Perhaps he did care, after all; Agatha was sorry to hurt anyone; she put out an awkward hand and touched his shoulder.

Dean turned gruff, sheepish. "Guess I'll be startin' the wood lot if I finish in time," he said, without meeting her eyes; "been meanin' to get over there all spring, but I've been too dog-goned busy. Potatoes, eh?"

"Potatoes," she agreed listlessly. "No one's touched the wood lot since Timothy worked there last fall—just before he took to his bed."

TWO hours later Agatha returned from another fruitless trip to the village and flung herself face down on her bed. She lay there, a lone, bleak figure, until an odd little stirring from Timothy's room roused her. She sat up, listened, at length crept silently across the hall, and stopped breathing entirely as she came before Timothy's open door. Fay stood there in the sunlight, her hands on her hips, her hat pushed tipsily back, and chuckled softly up at Timothy's portrait—an enlarged edition of Timothy and the marble-topped table: "I'm so darn happy I've got to tell someone, Uncle Tim, and there's not another soul!"

"Fay!" Agatha breathed in awe. "Oh, Aunt Aggie! I'll draw the shades right down again. . . . Why, what is it? You're crying! Why, honey!" Fay's arms were about her, hugging her tight. "I've been taking care of Deany's mother. She's getting along fine now, and your worries are about over, Aunt Aggie. I'll soon be leaving, clearing out with all my noise and messiness—as quick as Dean can save a bit. Jim Fisher'll take Dean's place."

"You mean . . . you and Dean?" Fey nodded, laughing. Agatha clutched her. "I won't have it, Fay! I can't stand it! I'll rent the farm to Dean, do anything—but you'll have to go on livin' with me. And I've been thinkin'

## Seeds That Are Worth Six Times as Much as Gold

(Continued from page 45)

hard conditions it ordinarily has to meet. But with man-grown plants everything is different. He gathers the seeds from selected plants. He doesn't let them rot on the ground. Men who make a business of producing seeds for the market clean them by suction, dry them—sometimes with hot air—and keep them under the best conditions.

Then they are given four tests: First, what is called a "quick germination test." A few of the seeds from one lot are placed on blotting paper. Another piece of paper is put over them. Both of these are wet. They are then kept in a sort of incubator for a couple of days at a temperature of about ninety degrees. Under these forced conditions they germinate, if they are seeds of the right quality.

They are given a second germination test by planting in greenhouses. There is also a "purity test," to determine whether they are free of dirt, chaff, and seeds of other plants or of weeds. Finally, there is an outdoor planting test to check up on all the others.

THE result is that most of these seeds will grow when planted. A good percentage for peas, for example, is ninety per cent; for eggplant and peppers, seventy per cent; for beans, one hundred per cent!

Man, therefore, does not have to produce a million times as many seeds as he intends to use. So he has bent his energies toward producing fewer seeds and smaller ones in proportion to the size of the fruit, or vegetable, or flower. He has tried to get rid of seeds entirely, wherever it was possible; as in the navel oranges and the seedless plum.

He says to Nature: "Now, don't worry! I'll keep this family going. I won't let it die out. Just you help me to give people something better to eat and more beautiful to look at."

And Nature certainly is a wonder when it comes to cooperating along that line. Do you remember the sunflowers that used to grow along the back fence when you were a child? They had a row of gold petals around a big brown center that was simply crammed with seeds. It was Nature's old trick of concentrating on seeds and not caring about beautiful but rather foolish petals.

Then human beings took a hand. They saw the possibilities of beauty in these common flowers. They began looking for exceptional specimens; those with more petals than usual; those of a little different color.

In a recent seed catalogue I counted sixteen varieties of sunflowers. Some of them had literally thousands of petals and only a very small seed center. They ranged in color from creamy white to red!

There was another flower your mother used to grow in her garden, the dahlia. It had quill-shaped petals, as stiff and formal as if cut out by a machine. But man took a hand in the affairs of the dahlia family.

## Treasures You Never Can Replace

A cherished silver heirloom—would you scour it with grit? Any treasure you can not replace deserves careful cleaning—and the precious thin enamel of your teeth is one of the greatest treasures you have. Once scratched or worn away by gritty dentifrices even Nature can never replace tooth enamel or restore its beauty. Choose a safe dental cream now—one that does not scratch or scour—and avoid years of regret later on.

Colgate's Cleans Teeth The Right Way  
"Washes" and Polishes—Doesn't Scratch or Scour

Impartial investigation recently made shows Colgate's is recommended by more Dentists than any other dentifrice.

Its non-gritty precipitated chalk loosens clinging particles from the enamel. Pure and mild, its vegetable oil soap gently washes them away. Children use it regularly and willingly because of its delicious flavor.

## The brush that fits all your teeth

THE tooth brush that cleans all your teeth except one or two is shirking its duty.

Pro-phy-lac-tic Tooth Brushes are designed to fit all your teeth and clean every one thoroughly. The tufted bristles reach between the teeth and into depressions caused by crooked teeth.

The curved handle of a Pro-phy-lac-tic enables you to brush the places ordinarily hard to reach. Even the inside surfaces and the backs of the back teeth are easy to clean.

Pro-phy-lac-tic Tooth Brushes come in three sizes—adults', youths' and children's; and in three degrees of stiffness—hard, medium, and soft.

FLORENCE MANUFACTURING CO.  
Florence, Mass.

Sold by all dealers in the United States and Canada

Always Sold in a Yellow Box

With the help of Nature he began to spin another romance of seeds: of birth and marriage and remarriage; of breeding and inbreeding and cross-breeding. Until today there are dozens of varieties of dahlias in all colors and shades, and in a bewildering diversity of forms. There are fashions in flowers; and dahlias are "in fashion" among flower growers now.

Vegetables don't exactly go out of fashion, but the demand for certain kinds is sometimes affected in peculiar ways. For instance, you may not see any connection between radishes and prohibition; but it is a fact that the eighteenth amendment caused a slump in the market for radishes. They used to be served in large quantities at the free lunch counters of saloons. With the passing of the free lunch, the demand for radishes was considerably less.

It may interest you to know that one of man's latest achievements is green corn which has a handle on the cob! This handle is a stem about two inches long, by which you can hold the corn while you eat it. If someone will now produce an ear of corn which I can eat without getting most of it on the outside of my face, instead of inside, I will rise up and call that man blessed. Green corn is as bad as watermelon, in regard to which the colored lady observed that her only trouble in eating it was that the seeds got into her ears!

I SPOKE of the amazing fact that tons of tomatoes can be raised from an ounce of seeds. It is hardly less astonishing to me that a dollar's worth of seeds will plant a garden, twenty by forty feet in size, with twenty varieties of vegetables; and that, if properly cultivated, this plot will produce enough vegetables for a family of four during a whole summer. Yet all the seeds necessary to furnish this supply would not fill a half-pint cup.

You may not want to grow either a vegetable or a flower garden, but would like to have some nice grass in your front yard. Perhaps you live in a city apartment, where the only "front yard" outside your eighth-story parlor windows is air! You can't very well have a lawn in midair. But how about the golf course, or the tennis court, where you sometimes play? And did you ever wonder how they keep the turf on a football field from being torn to pieces?

Growers have developed mixtures of grass seed adapted to the putting greens of golf courses; others for the fair green. There are special mixtures for the football field, the polo field, the tennis court, the croquet ground—each different from the others. There are mixtures for the South, for the seaside, for shady spots, for terraces, banks, and hillsides, as well as for level lawns.

Of course there are two ways of getting a lawn: by seeding the prepared ground, or by sodding it. One gains a little time by the latter method; but to my surprise Mr. Henderson declared that the time gained is very little, and that the ultimate results are far inferior to those obtained by seeding.

One extraordinary thing about seeds and plants is that they differ so strangely in their taste for food. Sweet peas, for instance, have a gluttonous appetite for nitrogen. But the curious thing about it is that they are very fussy about the way they get this nitrogen. They don't want it raw,

so to speak. Manure is very rich in ammonia, which contains a great deal of nitrogen. But if you put fresh manure on the soil around sweet peas, they will not thrive. No, indeed! they want to have the nitrogen served to them by an army of bacteria.

You know that farmers rotate their crops because one kind of crop eats up all of the food of one sort in the ground. The same program should be followed with vegetables. For example, leafy vegetables, like cabbage and lettuce, are greedy for nitrogen, which they take from the soil. So, if you have grown them in a certain spot for a year or two, follow them with beans or peas, which add nitrogen to the soil. As a rough guide, one should plant "below-ground" vegetables one season; vegetables like turnips, beets, and carrots. In the same plot the next season, plant "above-ground" vegetables, like peas, beans, and tomatoes; and vice versa.

ONE of the most important things to know about seeds is when to plant them. They remind me of the old nursery rhyme. Some like it hot and some like it cold. Also, some like shade and some like sun. Seedsmen get out a "planting table," telling when to sow certain seeds, or to set out various plants. But the coming of spring is not always according to schedule.

The best way to find out when spring is actually on the way is to watch what certain plants, trees, or shrubs are doing. The most reliable ones, according to the Henderson people, are the apple, cherry, quince, lilac, dogwood, strawberry, grape, and some others. They say that a grapevine is an almost infallible guide. If the leaf buds confidently swell, and the leaves unfold with assurance, you can safely turn weather prophet and begin to get your garden tools ready. But you must remember that not all kinds of seeds can be planted at once. Some of them can be sowed as soon as frost is out of the ground. Others must wait until May or June.

There is another curious difference in plants. Some live out the whole cycle of their existence in a single summer. The seeds germinate, grow; the plants bear flowers, and die. They are the annuals. Other seeds produce plants the first year that have no flowers. After a winter's sleep they come up again; and this season they flower and die. They are the biennials. But there are others that go on from year to year, growing and blossoming, but not dying unless they meet with some misfortune. They are the perennials.

And so, I too might go on, almost as indefinitely, with the story of the mysterious and marvelous ways of seeds and plants. To me the seeds are the more extraordinary of the two. I take half a dozen of them in my hand. They are not very different in size or in form. Yet this one will produce an elm tree and this one a watermelon! This will produce a sunflower and this one a pumpkin! Or here is one which, like the double petunia, will have lived its life within the span of a few months, and have died, leaving not even a seed behind; while here is another that will produce plants from which my grandchildren—if I had any—could gather flowers to put on my grave, if they wanted to—which, of course, they wouldn't. After all, is there anything in this wonderful world that is more wonderful than seeds?

**LUCKY STRIKE**

Dotted line indicates the normal gum line. Heavy lines show destruction of the root sockets that takes place under sore, bleeding, receding gums.

## Your teeth are like trees

NO ONE would think of spraying the branches of a tree to keep it healthy, while the soil around the roots was being dug away. Everyone knows that the life of a tree depends upon a good root foundation even more than upon well-cared-for branches.

The same thing is true of your teeth. No matter how white or free from decay you may keep them, unless your gums are healthy, pyorrhea will attack and weaken the bony root sockets which hold the teeth in place. Then they loosen and fall out (or must be extracted), because their root support is gone.

In addition to keeping the teeth white and clean, Pyorrhocide Powder tones and strengthens the gums. It is designed expressly to aid in repairing

### Soft, bleeding, receding gums

Pyorrhocide Powder is the one dentifrice that, since 1908, has been proved effective in clinics devoted exclusively to pyorrhea study and research. It keeps healthy gums healthy. It aids soft, tender, bleeding or receding gums to regain quickly their health and vitality, thereby strengthening the root foundation upon which your teeth must depend.

The economical dollar package contains six months' supply. Sold by all good drug stores and dental supply houses.

## If You Are Worried—Don't Eat

(Continued from page 53)

improve the health of many a business man who now makes a practice of studying stock reports or of perusing financial statements at lunch time.

We have positive evidence that the sight of food, the sound of food being prepared, and the odor of food will cause the stomach to secrete what is known as the "appetite juice." It is so called because it is secreted as a response to emotions pertaining to food. This appetite juice is of practically the same composition as the true gastric juice. Its chief office, however, is to stimulate the secretion of the true gastric juice, and if it is checked because of unpleasant emotions, relatively little true gastric juice will be secreted. On the other hand, appetizing food, served when the emotions are those arising from happiness, laughter, pleasant music, have the effect of stimulating these juices plentifully.

Professional men—doctors, lawyers, writers—and business men are among those who commonly complain of digestive troubles. One reason for this is that they are very apt to let their minds be occupied during meals with the problems of their working hours. Strangely enough, an occupation which seems to show a very high proportion of sufferers from digestive trouble is that of the night watchman.

THE prevalence of indigestion among night watchmen came to my attention some years ago when, at the Cornell Clinic in New York, we were classifying our patients with stomach troubles. The number of night watchmen suffering from indigestion was so large that we made a very careful research to determine the reason. Our conclusion was that the main factor leading to indigestion among these men was the lonesomeness and the somber conditions under which they ate their midnight meal, while the unsatisfactory, noisy apartments where they slept by day also had some bearing.

No matter how simple our meals, we should make a point of eating them under just as pleasant conditions as possible, with a decent and orderly ceremony, for this contributes to the agreeableness of the occasion. We should be especially careful that our sense of sight is not offended by the presence of dirty dishes or stains upon the tablecloth. Many people are unfavorably affected by the noise of rattling dishes, and the other sounds and sights of a busy, crowded restaurant.

A very simple thing, such as taking food in an order to which you are unaccustomed, may have the same effect. If you doubt that the order in which you eat your meal is important, just try reversing the arrangement of your dinner sometime. You will find that you cannot do justice to the food because of its unpalatability. Years ago as a boy I attended a class banquet at which several of us, as a stunt, agreed to start with the ice cream and to eat backward to the soup. With difficulty I got back as far as the salad. When it came to the meat I had had enough, and only my own will could make me eat it.

## Better Homes

Minneapolis, Minn.

The entrée I could not touch, and the mere sight of the soup being served to one of my companions was disgusting to me.

Many investigators have made experiments which strikingly confirm the theory that it is important to eat our meals when we are in an agreeable frame of mind. One scientist, by means of a stomach pump, removed from the stomachs of some dogs the food they had eaten when undisturbed and apparently happy. Examination of the food showed that digestion was progressing normally. On another occasion he allowed the dogs to be teased and annoyed by other dogs while they were eating, and this time the examination showed that the dogs' digestion had been greatly impaired, owing to the decrease in the secretions.

Any strong sensation of fear or anger causes the adrenal gland to secrete adrenalin, and for some time after such an emotion the proportion of adrenalin in the blood is considerably above normal. We know that the proportion of adrenalin in the blood has to do with regulating the blood pressure, and it also has a definite effect upon the various secretions, particularly the gastric juice. I can best show you the physical effect of these emotions by telling you of an experiment made upon cats:

The blood of a cat was tested to determine its normal content of adrenalin. Then the cat was put in a cage and teased until it showed signs of anger. A test of its blood then showed that the proportion of adrenalin was considerably higher. As the cat was angered more and more the proportion of adrenalin in the blood continued to increase. Finally, the teasing of the cat being continued, the adrenalin content sank back to normal. Then it dropped far below normal. In the end, the function of the adrenal gland was completely destroyed. After two or three days of teasing, the cat was really a crazy cat. The secretory functions in every part of its body had probably been affected.

**YOU** can see from this how disastrous the effect of strong emotions of fear or anger may be upon the digestive process, especially if these emotions occur at mealtime. The effect of these emotions at other times may be less apparent, but in the end they may be just as severe. Perhaps you have learned from experience that a "fit of anger" leaves you uncomfortable for hours afterward, and the effect may last for days. Intense anger lasting for a period of some days might lead to injuries which could not be repaired for weeks, and they might even be permanent.

Rapid eating is supposed to be one of the commonest causes of indigestion. However, this habit, if the individual has good strong teeth, is not in itself usually responsible for the trouble. The mental conditions which lead a man to eat hastily are far more important.

The man who is given to the habit of hasty eating usually has a nervous temperament. His business affairs are so pressing or his social engagements so badly arranged that he feels he must slight the important function of mastication to get at his other half-finished responsibilities. Thus, while eating, he is actually under an emotional strain, and is driven by a sense that haste is imperative.

Ordinarily the stomach can do wonders

## Take Your Dentist's Advice!

## Dr. West's TOOTH BRUSH

Dentists say that Dr. West's Tooth Brush is ideal, because its bristles reach with ease all the crevices and surfaces of your teeth—around, behind and between.

Cleans INSIDE

In 3 Sizes at All Good Dealers

Child's 25c  
Youth's 35c  
Adult's 50c

The bristles in Dr. West's Tooth Brush are scientifically shaped and placed. It is superior because it really cleans the very spots where decay most often lurks (those hard-to-reach surfaces inside and those crevices between).

Patents allowed in United States, Great Britain, France, Germany, Australia, New Zealand, Canada. Manufactured by Dr. West's Tooth Brush Co., Chicago, Ill.

## "From just enough to live on, to savings of \$1,400 in 11 months—"

Glen W. Rueckert, a Fuller Man at Fresno, California, was just "getting by."—making just enough to live on. He saw no chance for earning more money, or advancing in position, in the business he was in. His fellow workmen were men who had more years of experience than Rueckert was years old, yet they were getting no

more pay. Rueckert writes:—"You can see that my future looked pretty black." But Rueckert had the right stuff in him,—the grit that makes a man ultimately successful,—for right when jobs were scarce he quit. He writes:—"I then went out to find a job with some sort of future to it. I did not care if it did not pay so good at the start provided it had a real future. I chanced to see a Fuller Brush advertise-

ment (the same kind of advertisement that you are now reading), saying that any ambitious man could find his richest opportunity with Fuller, even though he had no selling experience. I got in touch with the nearest Fuller Office, and when the manager told me of the success so many inexperienced men had made, I knew that I could do the same. So I started with Fuller, and got two things at once,—a good paying job, with a real future to it. I had only \$34 to my name when I started. Now in less than 11 months I have a bank account of over \$1,400, and expect to have quite a bit more before my first year is up. I think there is a wonderful opportunity for any man with only common sense, a willingness to work, and a determination to succeed, if he casts his lot with the Fuller Brush Company. In fact, I don't know of another concern that offers the opportunity to earn, learn and advance that the Fuller Company offers."

## learn salesmanship while you earn—

Fuller trains and equips men to become successful salesmen, and then puts them in positions where they have every chance to succeed. And Fuller can use right now a limited number of ambitious men to first make good selling Fuller Brushes, and be in readiness for promotion opportunities. Any man now making less than \$35.00 weekly can immediately better his income. And Fuller sets no limit on what a Fuller Man can earn.

Write for booklet "Out of the Rut," telling how hundreds of men have found their success with Fuller. Don't wait for this book, but get in touch at once with any one of our 230 Branch offices (for address of one nearest you, look in telephone book). Evening appointments made, if desired. Or address

**THE FULLER BRUSH CO.**  
1080 Windsor Ave., HARTFORD, CONN.  
FULLER BRUSH CO., LTD., Hamilton, Canada

for a meal that has been slighted in the mouth, and for a long period of time it is able to accommodate itself to the individual's habits. But it is essential to bear in mind the simple physiological fact that the strongest stimulus to the secretion of the gastric juice and the proper muscular activity of the stomach is through the sense of taste. The longer this sense is stimulated, the greater will be the response of the cells which manufacture this juice.

While the regular practice of hasty eating is certainly a menace to health, any system which goes to the extent of regulating the number of chews to each mouthful is likely to be even more injurious, by causing a person to fix his attention on this act.

We know positively that directing one's attention to any part of the digestive process from the time food is taken into the mouth until the waste is evacuated can result only in harm. Eat your meals in such a way that you get the greatest possible pleasure from them. Then forget them. Your stomach and intestines will do the rest without any hint from you.

**M**ANY people believe that the stomach is the principal organ of digestion, while the intestines serve merely for the absorption of the digested product. However, this is not the case. The main office of the stomach is to prepare food in a preliminary way for further digestion and for absorption in the intestines. The main part of the digestive process is accomplished in the small intestine. Here the pancreatic juice, the intestinal juices, and portions of the bile act on the various food elements and convert them so they can be absorbed. Until comparatively recently it was thought that the process of digestion stopped when food had reached the colon, but now we know that a certain amount of absorption and actual digestive work is done by this organ. Hence the practice of frequent colon irrigations is to be condemned, except in cases where actual disease of the colon is known to exist. Even then they frequently do more harm than good.

In connection with the statement I have just made, that the work of the stomach is not so important as is generally believed, I might cite the case of a physician I know. His stomach is nothing more than a bag. From repeated examinations he knows that it secretes no gastric juice whatever—contains no hydrochloric acid, no pepsin. In other words, he has chronic gastritis. Yet he has no symptoms of this trouble. The condition itself is probably the result of over-work, and the worries incident to his early professional life.

That he has no symptoms, and suffers no inconvenience from this disorder, is due to two factors: first, the intestines are able to a great degree to compensate for deficiencies on the part of the stomach; second, he *understands* this fact; and does not worry nor concern himself about it. He eats whatever he feels inclined to, with no fear that anything will "disagree" with him. At the same time, he follows the rule that the less he eats the better in all probability he will feel.

There are many other misconceptions about the digestive process. Some of these I am going to explain here, for I believe that many people who think they suffer from poor digestion will find relief

You can be quickly cured, if you

## STAMMER

Send 10 cents for 288-page book on Stammering and Stuttering, "Its Cause and Cure." It tells how I cured myself after stammering 30 years. N. N. Bogus, 4043 Bogus Bldg., 1147 N. W. St., Indianapolis.

## The touch of unusual flavor—

Do you know that a STEERO bouillon cube added to hash, stew, soup, or gravy gives a delightful tastiness—the last touch of an unusual flavor? Any warmed-over dish will be more appetizing if flavored with a STEERO bouillon cube.

## STEERO BOUILLON CUBES

Try this—Macaroni Sauce

Melt in frying pan 2 tablespoonfuls butter, adding equal quantity of flour and 1½ cupfuls of milk, stirring till thick. Then add 2 STEERO bouillon cubes dissolved in ½ cup of boiling water.

for their symptoms if they understand the nature of these wrong beliefs.

It is generally believed that indigestion is a widespread affliction. The truth is that this trouble is comparatively rare. True indigestion means that food elements are not properly converted for the body's use, and that materials valuable for nourishment pass out of the intestine. This is not actually the trouble with the great majority of people who think they suffer from indigestion. What people think of as indigestion is due in the main to three things: (1) The patient's conscious concentration of his thought on some particular organ, the stomach, for instance; (2) over-work, worry, or other mental strain; (3) loss of sleep, under-exercise, bad ventilation, and other unhygienic conditions.

**M**ANY nervous people complain of feeling pressure in the stomach after meals and believe the pressure is caused by food remaining too long in this organ. As a rule, however, the stomachs of nervous people empty very rapidly, and the sense of pressure comes from the excessive muscular activity (hyper-peristalsis) of the stomach. The over-acidity is not a sign of real stomach trouble, but of the patient's disturbed mental condition, as I can show you through a case I recently visited in the New York Hospital.

This man is a bookkeeper in a bank. When he came to the hospital he was certain he was suffering from stomach trouble—a gastric ulcer—because he had had a gnawing pain. This had come on a certain hour after meals, and was relieved when he took a little food. The X-Ray and other methods of examination show that he has no ulcer. Instead, he has what we call a "gastric neurosis." The mental strain he has been under for some time is showing itself in the muscular activity of his stomach.

This man works hard and carries pretty heavy responsibilities. In the bank he has to see to it that checks on which payment has been stopped are not allowed to go through. He understands that if he slips up on this he will lose his position. For several years he has been on his toes all the time. A year ago he married, and this increased his anxiety lest he lose his job. The mental strain under which he has lived resulted in a nervous activity of his stomach, with a spasm of the pylorus. Because he had heard or read that a gastric ulcer was accompanied by a gnawing pain which is relieved by food, he came to believe that his pain was of this kind.

It is a very common thing for people to believe that such foods as milk, eggs, veal, lobster, tomatoes, cucumbers, or some particular combinations of foods, do not "agree" with them. I have known such people to exclude all meat from their diet. Some of them live on ridiculously restricted diets, having cut out one thing after another until there is nothing left but unpalatable stuff which they take for "nourishment," not God-given, enjoyable food. The fact is, however, that sensitiveness to particular foods or combinations of foods is rare, though a false sensitiveness can easily be acquired, if through fear one concentrates his attention on some food or class of foods with the expectation that they will disagree.

If you believe that some particular food

## WESTINGHOUSE BATTERIES

The car owner who appreciates the precious purpose of the spare tire or the emergency gallon of gasoline, will certainly appreciate the reserve power of the insured-service Westinghouse Standard Battery. It is *oversize*. In it Westinghouse has increased the plate area, and consequently the current capacity, as much as 20 per cent over ordinary batteries. All without adding to the dimensions of the box or skimping in details of construction!

*A size and type for every car.  
Service everywhere.*

WESTINGHOUSE UNION BATTERY CO.  
Swissvale, Pa.

## Deafness No Longer Bar to Success

### New Invention Aids Thousands

Here's good news for all who suffer from deafness. The Dictograph Products Corporation announces the perfection of a remarkable device which has enabled thousands of deaf persons to hear as well as ever. The makers of this wonderful device say it is too much to expect you to believe this, so they are going to give you a chance to try it at home. They offer to send it by prepaid parcel post on a ten-day free trial. They do not send it C. O. D.—they require no deposit—there is no obligation.

They send it entirely at their own expense and risk. They are making this extraordinary offer well knowing that the magic of this little instrument will so amaze and delight the user that the chances of its being returned are very slight. Thousands have already accepted this offer and report most gratifying results. There's no longer any need that you should endure the mental and physical strain which comes from a constant effort to hear. Now you can mingle with your friends without that feeling of sensitiveness from which all deaf persons suffer. Now you can take your place in the social and business world to which your talents entitle you and from which your affliction has, in a measure, excluded you. Just send your name and address to The Dictograph Products Corporation, 1333 Candler Building, New York, for descriptive literature and request blank.

## Why Good Dancers Are Popular

Every one admires and wants to dance with the person who knows the latest steps. There is no need of being a wall-flower! Arthur Murray, America's foremost dancing teacher, has perfected a wonderful new method by which you can learn any of the newest steps in a few minutes and all of the dances in a short time.

Even if you don't know one step from another, you can quickly and easily master any dance without music or partner, right in your own home. Your success is guaranteed. The Vanderbills and scores of other socially prominent people have chosen Mr. Murray as their dancing instructor. More than 50,000 people have learned to become popular dancers through his easy learn-at-home method.

Courtesy of Metro Pictures Corp.

### WONDERFUL TANGO FREE

To show you how easily and quickly you can learn his new way, Arthur Murray has consented to send for but a limited time a special course of sixteen dancing lessons for only \$1.00. A simplified version of the wonderful French Tango, as danced by Rodolph Valentino in the "Four Horsemen," will be sent absolutely free. This extraordinary offer is made to prove you will enjoy learning the newest steps in the privacy of your own home—without outlookers to embarrass you. You need not send any money now. When the postman hands you the 16-lesson course and the free tango, just deposit \$1 with him, plus a few cents postage, in full payment. If within five days you are not delighted, return the lessons and your money will be promptly refunded.

This unusual offer may not be made again. Write today for the 16-lesson course, which will be sent promptly, in plain cover. Learn at home and surprise your friends. Act now and be an accomplished dancer soon.

disagrees with you, it may very possibly be because, in belching, you have tasted it—eggs, say, or coffee. If so, you should understand that this particular food itself is not necessarily to blame. The immediate fault is in the belching.

In the great majority of cases belching is merely a habit. The habit begins when a person finds that the excessive nervous activity or tension of his stomach is relieved by a conscious effort to lift gas from the stomach. A small amount of normally imprisoned gas is released by this act, and the ensuing sensation is pleasurable. Nervous dyspeptics nearly always employ this acquired trick to impress their friends or medical advisers with the seriousness of their trouble, though it is not always done consciously.

Another misconception of very great importance concerns constipation. The fear that one may be constipated very often encourages the condition. On the other hand, it may be the result of impressions gained in childhood or youth from the mother, who has been heard frequently to express the fear that her child may be constipated. Habitual failure to respond promptly to the call of nature, and lack of exercise, foster this trouble. But the chief cause is a nervous or mental condition. In most cases it is readily cured, but not by means of laxatives.

First, you should realize that constipation is not nearly so serious as most people think it. The meaning of this last statement will become clear, I think, if I tell you of an experiment made by a scientific investigator.

**A** NUMBER of doctors and others who volunteered for this experiment were first tested to determine their normal powers of visual perception and mental concentration. After this by arranging their diet and by other means they were caused to become constipated. Then the tests were repeated, and the result showed that their efficiency was very much lowered. After a number of days of constipation their efficiency was reduced almost to zero. They complained of drowsiness, headache, pasty taste, and had all the other symptoms of this trouble.

Then they were all given laxatives and their bowels cleaned out by enemas. Immediately their efficiency swung back to normal. Their headaches, drowsiness, and the pasty taste disappeared.

So far, this experiment might cause you to think that the cause of their symptoms and their inefficiency was poisoning in the intestines due to the constipation. But the experiment was carried on to another phase.

Each of the patients was put on a table, and a speculum (an instrument to open the rectum) was introduced. By this means the rectum was packed and completely distended with pledgets of greased cotton. Thereupon, all the symptoms that these patients had complained of before returned, and in this condition they were just as low in their efficiency tests as when they were thoroughly constipated.

Such experiments as this indicate that the common symptoms of constipation are not due to poisoning in the intestines from the waste matter retained, but to nothing more than the pressure on the delicate and sensitive nerves which are so abundant in the rectum and lower colon.

A proper understanding of this fact will, I believe, assist anyone to cure himself of constipation through eliminating his constant fear of intestinal poisoning. Further to assist in curing this fault one should include in his diet a considerable proportion of bulky material, such as greens and other vegetables, thus giving the intestines something to grasp. Drink plenty of water. For a short time at the start it may be advisable to take a mild laxative, such as mineral oil, but this practice can soon be dispensed with.

Considering the enormous amount of work the stomach and intestines do, they really cause us very little trouble. We are much too apt to translate a little growl, ache, or pressure somewhere in the digestive tract into something serious. From what I have said you already know how directly your emotions affect the digestive organs; for the rest I would summarize my suggestions as follows:

Chew your food thoroughly—enough so that you enjoy and get the taste of it. Arrange your affairs so that you do not begin a meal with the idea that you must finish quickly.

Keep your mind off your internal organs. The stomach and intestines know more about digestion than you can possibly learn. They will do their work well if you conduct yourself properly.

IN a word, I would say—eat, drink, and be merry, not because you are going to die to-morrow, but because you want to live long and happily. I mean by drinking that you should take plenty of water between meals. A glass of water during the meal is also good. Don't drink water at meals so as to wash down food and interfere with that part of digestion which goes on in the mouth. Your mealtime glass of water is best taken between courses.

The essential things to bear in mind regarding your diet are these: Eat more green vegetables and fresh fruits when they are in the market. Use canned vegetables and canned or dried fruits when fresh ones are not obtainable. Make your diet a varied one, and avoid fads. You can eat what tastes good to you, but your meals should be balanced with two green vegetables to one starchy food such as rice, macaroni, noodles, white or sweet potatoes. Once a day it is advisable to take some uncooked fruits, fruit juices, or tomatoes.

**"EVA LE GALLIENNE: the Story of a Stubborn Girl"** is the title of Mary B. Mullett's article next month about one of the most interesting of our recently "arrived" stage stars. In the first four years of her theatrical career Miss Le Gallienne was out of a job twelve times. With unbreakable determination she kept going on, however, until she achieved a sensational triumph in "Liliom," one of the greatest theatrical successes of the last two or three seasons.

**"A BUSINESS Genius Who Has Done What Others Said Was Impossible"** is the title next month of the dramatic business story of William M. Wood, head of the American Woolen Company and one of the most powerful industrial executives in America.

# KIMBALL

*"The Instrument of Yesterday, Today and Tomorrow"*

AS JEAN DE RESZKE, operatic idol of yesterday, chose a KIMBALL for his personal use, because of its beautiful singing quality of tone—so Charles Marshall, now acclaimed the most heroic figure among heroic tenors, gives expression to his approval of the incomparable KIMBALL—the instrument of imperishable fame.

# How Some Men Spoil Their Lives by Being Stingy

(Continued from page 59)

they gave their best efforts to see that the food was served properly and promptly. . . . The guests commented upon the high quality of the service, but a look of chagrin passed over the faces of all at the table when the host left two dollars and fifty cents on the silver tray to be divided equally between two efficient servants.

Wrong in principle though tipping may be, the fact remains that that host had publicly put himself on record with nine of his best friends as being stingy and ungenerous. He had spoiled the effect of his luncheon by being niggardly with his servants.

Custom has established the rule that ten per cent of the check is a fair tip. It is a safe rule to go by, be the check large or small. Had that host followed the custom there would have been no banging of doors and no angry rattling of dishes at the conclusion of his luncheon.

**F**ROM a purely selfish standpoint stinginess doesn't pay. Once get the reputation of a tightwad, and annoyances pile up for you. The world enjoys the discomfiture of the closefisted man. Sticking the tightwad for the lunches is the favorite sport in every club. How the gang loves to see him sign the check!

"You stuck for this meal, Joe," says a smiling friend across the table, "then I'll make mine a regular one."

The tightwad pays more in the end. The little he saves is wiped out when the world gets a chance to soak him. And what an uncomfortable journey the world gives him!

Not all stinginess is in money. I know people who are stingy with their words, their company, and their time. There are many little things which they could do at no expense to themselves which would make other people happier and themselves more popular, but they begrudge the effort.

The old cry: "What is there in it for me?" is forever on their lips. Yet the little things in which there seem to be nothing for us at the time frequently return us the most.

I have a friend who never arrives at the golf club or departs from it with less than four boys in his car. It costs him a few seconds' time to stop for them, and that is all. He is never obliged to go out of his way. You couldn't find the expense item in his bill for oil and gasoline. The door of his car swings open cheerfully for these little fellows, and the luxury of his upholstered sedan is theirs for the asking.

"There is nothing in it for him," says the cynic. But go out and play golf with him, and notice how his caddie is pulling for him to win. Not a boy in the throng who isn't eager to work for him or feels it a personal loss when he is defeated.

I mentioned his name to a flock of the youngsters the other day.

"He's all right," they said in chorus.

I mentioned the club grouch.

"It's tough when we draw his bag," they said. "The kids hate to work for him."

Boys know human nature and they judge characters precisely. The grouch pays his caddie the same amount of money as the popular man, but he gets unwilling service. He has never been known to utter a word of praise to the struggling little fellows at his side.

J. L. Hudson at the time of his death was one of Detroit's leading merchants. His responsibilities were great and the demands upon his time were many. He is remembered to-day for his charities and his generous nature. But to me the greatest side of Mr. Hudson's character has never been emphasized. We remember here the things he did cheerfully when asked, but the little out-of-the-way, unobserved things he did voluntarily and unasked have been forgotten or are seldom mentioned.

He never overlooked an opportunity to speak a kindly word to those he thought would be encouraged by it. His first thought every morning was of his friends, whether in joy or sorrow. His stenographer began the day by taking a few personal notes of good cheer or sympathy. Young men who were rising in the world attracted his attention, and would receive congratulations from him.

I have good reason to know this and to remember it. The first bit of outside recognition of my work came from him.

"Dear Eddie," that typewritten letter began, "this morning I enjoyed that verse of yours. I want to congratulate you. It was fine."

That didn't take J. L. Hudson half a minute to dictate and sign, but it came to me more than twenty years ago, and I am still grateful for it. I had many more such little notes from him as the years went on, some bringing me his sympathy, but all carrying encouragement.

A few minutes of his time, a few two-cent stamps, and numerous people made happy every morning. What a chance the selfish and thoughtless people overlook!

**I**T IS the voluntary kindness which looms largest, after all. The stingy man counts time as money, and the habit grows upon him. He holds himself back when he ought to let go. He could write friendly letters, too; but he is too busy.

I have noticed that it is always the generous man who calls on the sick. You don't find the stingy man sitting at the hospital bedside of his friend in the afternoon. He is busy at his job, and the hospital is a little out of his way. He doesn't mean to be stingy. He will send a bouquet of flowers, or pay his fifty cents to the office contribution. That done, he waits for his friend to recover, and the first thing he does when they meet again usually is to ask him if his flowers arrived all right. The man means well enough, but he has the unfortunate habit of appearing at his worst. He has not learned to think beyond himself.

The happy, genial man is different. He

# going to New York?

A Personal Word

From Arthur L. Lee

HAVE you ever, in your travels, found a Hotel (probably of moderate size) where the Owner or Manager, by his personal interest in your comfort and welfare, made your stay conspicuously pleasant?

If so, you are looking forward to another visit—and that is just the atmosphere that now pervades the Hotel McAlpin.

If you will write me personally the requirements of yourself or family, I will see that you are exactly suited.

My staff, both male and female, from the house manager to the bell boy, are trained to make the smallest detail of your stay, both in and out of the Hotel, a series of pleasant experiences by their courteous, unobtrusive interest.

The McAlpin equipment, furnishings and cuisine are reputed to be unsurpassed, if equaled, by any Hotel here or abroad.

But aside from this, if there is any detail, great or small, in which I can help during your stay, let me know and I shall never be too busy to demonstrate my desire to establish with you the interest of a host with his guest rather than a manager with his patron.

Thus do I believe I will succeed in leaving with you the cordial desire to make the Hotel McAlpin your New York home in the future.

ARTHUR L. LEE, Manager.

"The Center of Convenience"  
Broadway at 34<sup>th</sup> Street

The ALADDIN Co., BAY CITY, MICHIGAN

Wilmington, North Carolina; Portland, Oregon; Toronto, Ontario

can picture Bill lying in that hospital, and he knows it must be lonesome at the best. Flowers are fine enough, but you can't say everything with them. So some evening he says to his wife, "Let's stop and see Bill on the way down-town."

Bill has about made up his mind that his friends have all left town, when in drops the kindly-hearted one with a grin and a jest and the news of the week.

Not much to do, but those of us who do it are too few. We're too stingy with our time to spend it that way. We'd like to do it, too. We think of it often enough, but always when we're in a hurry to do something else, and Bill recovers or dies without really knowing we were interested in him.

"Clint died last night," said the city editor one noon when we reported for duty.

"Oh, that's too bad," said every one of us, and eight of us told each other that we had intended calling upon him to-day. But the real good fellow of our flock, the fine true-blue, lovable soul had it on us.

"I was with him in the afternoon," he said simply; and added, "I was afraid it had to be."

He had been with him in the afternoon! Clint knew which of us was his real friend. He might have seen us all that day had we not been too stingy with our time and too eager in the pursuit of our own success. We should have liked to have visited Clint, but we begrudged the effort.

SELFISHNESS spoils us all; there is none of us without it.

Yet now and then there rises among us one who seems by nature endowed with kindness and thoughtfulness, and the writers of the world call it personality. He knows how to say "Good morning" as though he meant it; he drops into your home with trifling gifts, which he fancied you would like; he hears something he thinks you would want to hear, and he calls you up to tell you of it; he seems always to be going out of his way to do somebody a good turn. He it is who sees the gray-haired old woman waiting at the corner for the crowded street car; stops and invites her to ride; learns where she is going, and takes her to her door.

Most of us see the old lady, too; but we are always in a hurry.

There is none so rich that he can afford to be wasteful, and none so poor that he need be stingy. The eyes of mankind are keen to make distinctions. The kindly nature is seldom misunderstood. Its purse may be limited, but the graciousness of spirit is nearly always felt and appreciated.

There is a wide difference between stinginess and economy. The latter deserves and should win all men's admiration.

Economy is that golden trait by which a man disciplines himself and makes himself do without those luxuries of life which his purse cannot readily afford. Economy is that strain of courage which holds a man to his definite purpose. Economy will not take where it cannot give; it will not go where it cannot pay, and it will not accept what it cannot bestow. The economical man saves at the expense of his own desires. He denies himself pleasures and comforts for to-morrow's greater good. The burden economy imposes he willingly bears, and at no sacrifice of his self-respect.

How vastly different is stinginess!

Agents or dealers wanted in all parts of the country. Every auto owner should have one. They pay for themselves in a few nights of use, saving expensive hotel bills.

Summed up, it is the petty trait by which a man saves just a little for himself at the expense of others.

Stinginess isn't found only in hotels and clubs and cafés. I know stingy husbands and stingy fathers and stingy wives and stingy mothers. They all have every element which goes to make for peace and contentment and comfort in their homes; but they begrudge the little finishing touches which are so vital to perfection.

A business man of my acquaintance has the reputation of being closefisted in business. At the club or away from the office he is a joy to know; but those who must work for him lead hard lives, and those who sell to him find him difficult to deal with. He insists on exacting the ultimate cent. His employees laugh behind his back and tell all manner of stories concerning his closefistedness.

"He counts the lead pencils every night," said one of them to me.

"There was an awful row here to-day," said another. "The boss missed a two-cent stamp."

This stingy man has made himself miserable and despised for less than two hundred dollars a year. What he saves means nothing to his business; indeed, the chances are that his profits would be greater if the employees found him a more gracious chief to work for. Good nature and kindly ways pay large dividends.

I dropped into a florist's shop one day last spring. The proprietor was smiling to himself. A millionaire and his wife had just passed out.

"That old bird is certainly a tightwad," said the florist to me. "His wife is passionately fond of violets. She saw my collection over there and wanted a bouquet. Do you think that man of millions would pay a dollar to give her a little pleasure? Not he! She could get along without violets, he told her. I thought he might loosen up before they left, and I let them get as far as the door. Then I made up my mind that if he wouldn't buy his wife violets I would. So I handed her a bunch with my compliments. There was more than gratitude in her eyes—there was a look which said as plainly as words, 'I'm sorry you've discovered what a stingy husband I'm married to.'"

**STINGINESS** is a fast-traveling advertisement. It is a belittling trait, and a man is a fool to acquire it.

It is not enough to be generous and a good fellow down-town. Liberality must be four-square. I know some fellows whose stinginess at home is almost beyond belief. The two or three hundred dollars a year which win for them the reputation for generosity they have among strangers are really pinched out of the pockets of their wives and children. Those who should be first to enjoy the little comforts and pleasures which they can give are held to the last. Their own must expect nothing beyond the necessities of life.

I know one woman who has been forced to obtain her spending money by conspiring with the butcher, the grocer, and the milliner. She may buy freely, and her husband will pay the bills promptly; but he will not give her money to spend in her own way.

In desperation she hit upon the plan of telling her stingy husband's shame to the tradesmen, and soliciting their assistance.

Each month they falsify their bills, increasing the actual charge by fifteen or twenty dollars. These bills the man pays, and later the wife calls on the butcher, the grocer, and her milliner, and collects the balance in cash. Thus it has become common gossip that Mrs. So-and-so has a tightwad for a husband. Poor blind fool who has still to discover what his own stinginess is costing him!

I do not believe in foolish giving or false generosity; nor can the esteem of others actually be purchased. The man who throws ten-dollar bills at the feet of bell boys is a fool, even in the opinion of the bell boys who take his money. The admiration of our fellows and their willingness to serve and assist us are so easy to win, and cost us so little, I am surprised that stingy men have not discovered it.

**GENEROSITY** of nature is a personal trait. The stingy man as a rule is stingy of himself. He is apt to be as ungracious with his words and his smiles and his time as he is with his small change. He is unappreciative. He assumes the attitude that the service of others, even that of his wife and children, is his by right. Is it not the business of a servant to serve, of a wife to be devoted, patient, and loyal, of a child to be loving and cheerful, and a friend to be friendly? To praise them then would be a waste of time and thoughtfulness, would it not? All this may be true, as a matter of principle, but I don't think so. Anyhow, what a hard way to live!

The true wife and the good children, the faithful servant, and the loyal friend cannot be repaid in wages and the necessities of life. All must have smiles and kind words and gentle thoughts and little gifts of love from time to time.

Not long ago I was in a hotel in Philadelphia where a business acquaintance of mine was staying. We were together several days, and I noted the way the employees of the hotel treated him. His requests were complied with promptly and cheerfully. From the bell boys to the manager he received the utmost consideration. His tips were never too much or too little, and were given unobtrusively.

I was curious about him, and so I asked the waiter, the bell boys, and the porter. In substance they all said: "He's a fine fellow, and we like him."

"Does he give large tips?"

"He doesn't have to tip," said the porter.

"What's his secret?"

"He always says, 'Thank you.'"

All men must have the "thank you's" of life now and then, if they are to find happiness in their work. A little praise does much, and yet there are men who are stingy even with that. A few more "thank you's" tossed out here and there, a few more bright "good morning's" and "good evening's," a few more little evidences of appreciation, and life would be brighter and smoother for us all.

The difference between the well-loved man and the disagreeable, stingy man is not great.

In actual cash, it represents not more than two or three hundred dollars a year.

In words, it can be summed up in a few more "thank you's."

In conduct, it is the difference between appreciating loyalty and friendship and devotion, or in demanding and taking all service as "a matter of principle."

**There  
is Only  
One  
Slidetite**

Because they're used most, doors are *the important part* of your garage—

so equip them with the one hardware which guarantees a lifetime of service. Garage owners everywhere will tell you that, for ease of operation and absolute freedom from trouble, there is only one

## *Slidetite* Garage Door Hardware

Garage doors fitted with *Slidetite* fold inside, flat against the wall, leaving a full, unobstructed opening. They cannot blow shut when open, and are absolutely weather-tight when closed.

*Slidetite* equipped doors slide easily on a jointless track—a child can open or close them.

*Don't think of building a new garage, or remodeling the old one, without the practical suggestions and illustrations of modern garage doorways contained in Catalog O-29. It's free for the asking.*

*Hardware and lumber dealers everywhere sell Slidetite, or will order it for you from our nearest branch.*

*Slidetite is not only superior for small garages, but it is the only practicable hardware for openings requiring more than six doors. Even in openings as wide as 30 feet, the doors will never stick or sag.*

## Just "Common" Folks—These Eighteen Hundred Heroes

(Continued from page 62)

carried the baby to her own house, followed by the half-frozen mother. Next she went back and brought Henry to safety. Then she found that Mrs. Jacques had been forced to leave two-year-old Gertrude in the snow, three quarters of a mile away. The mother had taken off most of her clothing and wrapped it around the child before leaving her.

Again Mrs. Langdon fought her way through the drifts, in that bitter cold, until she found Gertrude. The poor little thing had tried to get back to her home, but had fallen exhausted. Mrs. Langdon, her own strength almost gone, picked up the child and tried to carry it to her house. She struggled on, although her strength was almost gone.

Then she found that the child was dead. Realizing that she herself could not last much longer, she took off her own coat, wrapped it around the little body and laid it down. She succeeded in reaching her house, where she dropped exhausted.

**ONLY** a woman! One of those weak, silly creatures at whose frailties men laugh. But among these stories which I have been reading are many, many others like this one about Marie Langdon; stories of presence of mind and of courage which make one think twice before using that hackneyed phrase, "only a woman."

There was Phebe Briggs, for example, who in February, 1913, was a student at Vassar College. One dark night, when the temperature was eight degrees below freezing, five students—Miss Reiner, Miss Oldham, Miss Hulst, and two other girls—coasted on a toboggan down a slide on the Vassar campus.

Miss Briggs—who did not know any of these five girls—was with a companion at the top of the slide when the others started. A moment or two after they had disappeared in the darkness she heard screams for help. Telling her companion to go for assistance, she ran toward the spot from which the screams came. She found that the toboggan had left its course, gone onto a frozen lake, broken through the ice, and thrown the five girls into the water.

Taking her own sled, she crawled on her hands and knees over the ice until she could push the sled close to the edge of the hole, where Miss Reiner grasped it. Miss Briggs then crawled back, pulling the sled, and with it Miss Reiner. When she had got the girl to a safe place, Miss Briggs crawled back and rescued Miss Oldham.

When she tried to help Miss Hulst in the same way, the ice broke and she herself went into the water. She then pushed the sled down until it rested on the bottom in an upright position. Balancing herself on the upper edge, she kept her head above water, while she got hold of Miss Hulst and supported her until help arrived.

As I read these hundreds of stories of heroism, I kept picking out other well-

worn targets for popular jokes, other familiar phrases. There are the jokes about darkies, for instance; and the phrase "just a common laborer."

The other night I saw a moving picture, "The Ghost Breaker," in which the chief comic character was a negro; such a scared negro that if he could have turned pale he would have been whiter than the leading lady herself.

I thought of him when I read this story of James W. Brice, Senior, of Culloden, Georgia. Not only was Brice a colored man, but he also was blind and had only one hand. He was just a laborer, too; probably, as "common" a laborer as you could find anywhere.

Another colored man, Jones, was overcome by carbon dioxide gas at the bottom of a well forty feet deep. Brice volunteered to go down and tie a rope around Jones, so that he could be pulled out. Two white men lowered him into the well; but being blind, having only one hand, and becoming dizzy from the effects of the gas, he spent five minutes trying unsuccessfully to tie the rope to the unconscious Jones. Then the men above told him to come out; and, as he knew he couldn't manage the rescue, he allowed himself to be hoisted to the surface. Another man did rescue Jones; but Brice's act lost none of its quality because of its failure.

THIS is also a story of a well; but in this case it was sixty feet deep and only thirteen inches in diameter. In February, 1912, a white child, Calvin Stepp, only two years old, fell to the bottom of this well, in which there was eighteen inches of water. Fortunately, he went down feet first. After failing to rescue the child by means of a hook, his uncle asked a colored boy, Elbert Gray, if he would try to save the baby. Without any reward being promised him, Gray consented.

A rope was tied under his arms and he was lowered down the hole. It was so narrow that he had to crowd his shoulders forward and hold his hands straight down in front of him. When he reached the bottom, he managed to grasp Calvin's clothes and the two were hoisted up. But before they reached the surface, the child's clothing gave way and he fell back to the bottom of the well.

Gray was pulled out, crying with fright and with pain, for the skin had been scraped off his arms and his face was scratched and bleeding. Nevertheless he went down again—this time, head first! although he heard a man say he would be dead before he reached the bottom. He carried a rope with him, tied this around the child, and both were hoisted to the surface. Fortunately, neither of them was seriously injured.

And how about the farmers? Did you ever call them rubes and hayseeds? Some people do. Well, there is Russell L. Norburn. He isn't a farmer now; but he was one in 1912 when he saved the life of Rupert J. Crowell, at Balsam, North Carolina. Norburn was eighteen then, and Crowell was sixteen.

The latter lost his footing and slid into the torrent of Balsam Falls. He lay there, dazed and stunned, only a foot or two from the brink of the falls, with nothing but a slippery ledge, only five inches high, to prevent his falling to the jagged rocks

# MACGREGOR

One of our men at play on our private golf course

The same man photographed while at work in our shops

## Golfers as well as Club Makers

IT is not uncommon to hear golfers speak in most laudatory terms of the results secured with their MACGREGOR clubs. They find keener enjoyment in their game because of the confidence inspired by a "subtle something" about the feel of the clubs in their hands.

This is easily understood when the human element in club construction is considered. The attaining of perfect balance, rhythm and feel requires such delicate and accurate workmanship that it is best accomplished by men who possess a happy blending of the master's skill with an intimate appreciation of what the clubs must do. Such are MACGREGOR craftsmen.

They play golf regularly on our own private course. They accomplish such wonders in club construction because they not only *know* how, but they take that pride in their work which only a golfer can feel.

Always say MACGREGOR to your Pro or Dealer for golf clubs and balls. Write us for our General Catalog and either or both of these booklets: 1. "Golf the Game of Champions" (an introduction to golf). 2. "Stepping Stones to a Golf Course" (helpful suggestions for laying out a new course).

**Alabastine**  
Instead of Kalsomine or Wall Paper

a hundred feet below. The water rushed by him, in waves two feet high, threatening to carry him over the brink.

Norburn was holding to a tree for safety when he saw Crowell fall. Between them was a slippery bank of bare rock which sloped sharply toward the brink. He made his way along this rock, in imminent danger himself, and deliberately fell on Crowell to keep the latter from being washed over the edge. Then, getting to his knees in the water, within two feet of the brink, he rolled Crowell toward the bank and helped him up its treacherous surface to safety.

Reading the list of these eighteen hundred heroes is like reading a roll call of the nations. They are all there: Anglo-Saxon, Irish, German, French, Scandinavian, Russian, Italian, Jewish—and so on, clear across the map. It wouldn't be a bad idea for you to remember this if you ever are inclined to talk about "dagoes" and "wops" and "sheenies" and "frog-eaters" and "square-heads."

There are the Armenians, for example. Most of us know only two things about Armenians: They are always getting massacred by Turks; and they are always coming around with paper suit cases full of doilies and lace edging which they want us to buy—generally at the most inconvenient moment possible.

**B**UT that isn't the whole story of these people; not by any manner of means. The following incident seems to indicate that even long centuries of oppression have not entirely crushed out every spark of courage. Have you ever stood close to the brink of Niagara Falls? If so, ask yourself what you would have done, if you had been in this young Armenian's place.

His name was Iram Kevorkian. He was twenty-four years old a laborer—probably "a common laborer." In May, 1912, he saw a man named Lutz fall into the Niagara River. Lutz was being swept toward the American Falls when Kevorkian, who could not swim, waded into the water, which reached nearly to his hips, at a point one hundred and fifty feet above the brink and, as Lutz drifted by, caught him with a pike pole. The pull of the current on Lutz's body caused Kevorkian to slide two or three feet on the slimy, rocky bottom. He called for help and men joined hands and waded into the water. One of them grabbed Kevorkian's hand, and he and Lutz were pulled to shore.

You will be interested to know just how the commission decides that a person is a hero, and what it does for him. Up to the close of 1922, the commission had considered approximately 23,000 cases. Of these, about 20,000 had been refused, about 1,800 had been granted, and the rest were still pending.

Every case must be reported to the commission in writing. There is no rule that a man shall not come forward, report his own case, and ask to be called a hero; but they don't do it. Occasionally a proud relative wants to show that there is a hero in the family; but in most cases the matter is reported by some bystander, or, I am happy to say, by the person who was rescued.

These reported cases are investigated and all the evidence is carefully weighed. If the case is granted, the next thing is to decide on the award to be given. In every

### For Infant and Baby Feeding

## Purebred Holstein Milk

For centuries the first aim of Holstein breeders has been to develop a large, healthy and vigorous cow with a milk production to correspond. That they have succeeded is evidenced by the fact that Holsteins today are not only the largest and most vigorous breed of cows in the world, but in total butter-fat and milk yield they average highest over all breeds.

Health, vigor and vitality are outstanding characteristics of the purebred Holstein cow. The fact that the fat globules in Holstein milk are closest in size to those in Mother's milk, and that the milk contains an abundance of sugar, phosphorous and lime for building bone and muscle, makes it an ideal food for infants and babies.

Write us if your milkman cannot supply you with purebred Holstein milk and we will assist you in securing it.

Write for our booklet on "The Milk Road to Child Health," sent prepaid upon request.

EXTENSION SERVICE

The Holstein-Friesian Ass'n of America

231 East Ohio Street,  
Chicago, Ill.

instance, the hero or heroine receives a medal—gold, silver, or bronze. There have been only eighteen gold medals awarded. None has been given for any act performed during the past nine years. Four hundred and eighty-three silver medals have been granted.

But Mr. Carnegie realized that even a gold medal would not put bread into the mouths of children whose father had died to save others. He wanted these acts of "glorious folly" to have an aftermath of practical benefit. So he directed that sums of money should be given, where needed, to be used for a worthy purpose. In many cases, of course, money is not needed and is not given.

THESE sums have ranged from a few hundred to a few thousand dollars. With them, mortgages have been paid, homes bought, debts cleared, monthly off, pensions paid to widows and orphans. Boys and girls who perform acts of heroism receive money for an education. A working man who is disabled in performing such an act, receives a money benefit "as needed."

As examples of how the money awards are used, Russell Norburn is being helped to become a physician; Brice, the blind colored man, was sent to a hospital, where his sight was partially restored; and Percy Walker's wife and children were supported during a critical period of their lives.

But the commission does not pay over all this money and then wash its hands of the matter. When a grant of money has been made, the work of the commission has only begun. The beneficiaries become its wards, in whose affairs it takes an active interest, advising, directing, and sometimes restraining. This involves an immense amount of work, but it is necessary in order to carry out the purpose of the deed of trust. Up to January, 1922, nearly two million dollars had been paid to heroes and their dependents. This included pension payments.

These stories which I have been reading are the stories of brave men. And yet—some of them were not even good men. For there are many strange things about courage, but this is the strangest of all—that in the most weak and worthless human soul there does sometimes smolder this one spark of divinity.

No one knew this better than the wise old Scotchman who created the Hero Fund. In the deed of trust he put this paragraph:

"No grant is to be continued, unless it be soberly and properly used, and the recipients remain respectable, well-behaved members of the community; but the heroes and heroines are to be given a fair trial. . . . Heroes deserve pardon and a fresh start."

"THE SEVEN GREATEST AMERICANS" are selected from all the notable people of this country, past and present, and graphically analyzed next month by James Harvey Robinson, one of the leaders of modern thought in the realms of history, psychology, and practical philosophy. The hundreds of thousands who have read Doctor Robinson's "The Mind in the Making" will be particularly interested in trying to forecast which seven men he has picked out.

## First Aid for home hurts

No injury is trivial when the consequences of its neglect are considered. A cut, scratch, bruise, strain or sprain demands prompt attention and treatment.

Too often is precious time lost in such emergencies. An antiseptic or a liniment may be required, or both! Have you these home necessities combined in one preparation—quickly available in one container?

Its convenience is but one of many reasons why Absorbine, Jr., occupies a never-empty place in so many thousands of homes.

At most druggists', \$1.25, or postpaid. Liberal trial bottle 10c., postpaid.  
W. F. YOUNG, Inc., 178 Temple St., Springfield, Mass.

## See How Easily You Can Learn to Dance This New Way

Arthur Murray,  
Dancing  
Instructor to the  
Vanderbills

No matter how skeptical you may be about being able to learn to dance by mail, Arthur Murray's new sixteen-lesson course will quickly prove to you that you can easily learn to become a perfect dancer without a teacher on the ground to direct your steps—without music or partner—right in your own home. If you will follow simple instructions shown on diagrams, practice the steps a few times to fix them in your memory, there is no reason why you should not be able to dance on any floor, to either hand or phonograph music, and to lead, follow and balance correctly, no matter how expert your partner may be.

Whether you want to learn the Fox Trot, One Step, Waltz, or any of the newer steps, you won't have the slightest difficulty in doing so through this new method. Arthur Murray guarantees to teach you, or your lessons won't cost you one cent.

Send No Money—Not One Cent

### FREE TANGO LESSON

Arthur Murray has diagrammed the principal steps in the famous Tango as danced by Rudolph Valentino in such a simplified way that you can quickly and easily master this fascinating dance, after you have the Murray foundation to your dancing. Send for this Tango lesson today and you will soon be able to amaze all your friends with your ability to dance it perfectly.

More than 90,000 people have learned to become perfect dancers by mail. In fact, about five thousand people a month are becoming wonderful dancers through Arthur Murray's amazing new method.

Send the coupon today, and Arthur Murray will send you the NEW 16-LESSON COURSE AND THE FREE FASCINATING TANGO.

Courtesy of Metro Pictures Corp.

Prove for yourself how quickly and easily you can learn all of the newest steps and dances. Don't send any money now—just the coupon. When the postman hands you the 16-lesson course just deposit \$1.00 with him, plus a few cents postage, in full payment. And if within five days you are not delighted, return the complete course and your money will be promptly refunded. Otherwise the course becomes your personal property without any further payments. Send the coupon NOW. Don't delay. Return the coupon at once and the 16-lesson course will be promptly mailed to you.

ARTHUR MURRAY, Studio 719, 801 Madison Ave., New York

ARTHUR MURRAY, Studio 719, 801 Madison Ave., New York

You may send the 16-lesson new course and the Fascinating FREE Tango in plain cover and when the postman hands it to me I will deposit \$1.00 with him (plus the few cents postage) in full payment. If within five days I decide to return the course, I may do so, and you will refund my money promptly and without question.

## Tips From an Envelope Man

(Continued from page 69)

vivid colors were being used, we had all kinds of freak envelopes. Enterprising manufacturers got them out in round, triangular, and heart shapes. Then the Post Office Department made a ruling that envelopes must be rectangular to facilitate the work of the canceling machines.

The freak envelopes carried all sorts of freak monograms; some of the monograms were frosted, while gold and silver stamping was very common. I have heard it said that some monograms were frosted with powdered diamonds, but I have never seen any.

The envelope is no place for a monogram or a decoration. The object of putting anything on the envelope other than the address should be solely to insure the return of the letter if not delivered. A monogram does not help the return. Nowadays the best practice is to put on the envelope only the sender's address and his name. A number of prominent men have only their names engraved or embossed on the flap of the envelope. Years ago it was quite common among certain kinds of business men to have their portraits and the names of their towns printed on envelopes. The post office clerks were supposed to know their faces, and in small towns they did. The trade mark and address still survive.

IT IS now considered rather a mark of provincialism to have much printing on envelopes or to use signs and emblems instead of the name. There used to be a man in Atlanta named "Rose," who put a rose and Atlanta on his envelope. Other people have carried out the same idea, but they are comparatively few, for the object of a name on the envelope is not to advertise how well known one may be but to get the letter back if it be not delivered.

Remember, the address should be easily read, and for that reason double spacing between the lines is preferable to single spacing. The stamp should be squarely in the upper right-hand corner, otherwise the letter may be thrown aside in a busy post office along with the letters that have insufficient postage. The address should be written without punctuation, and numbers should not be spelled out. For instance "2 Beach Street," is better than "Two Beach Street."

Women were the first to take up the fashion of having paper and envelopes match. The box of writing paper and envelopes that you now buy anywhere was once a novelty and then a craze. Elisha Morgan, an envelope maker of Springfield, Massachusetts, appears to have been the first man to get the idea that women would like style in note paper. He started to put correspondence on the map. In 1865 he offered for sale a cardboard box of note paper and envelopes that matched. More than that, he put a steel plate portrait of Mrs. Scott-Siddons on the cover—she was the Mary Pickford of the time. The idea took at once, and for the next twenty or thirty years the

Nowadays most of the colored note papers are sold in country districts or to foreigners. Business uses colors only to distinguish departments. If I get a cheap pink envelope, I know at once that, whatever the virtues of the writer may be, he or she has not been much out in the world. Many firms will not even consider applications for positions that are written on colored paper. On the other hand, I have known men of large means and unquestioned tastes who used light blue for their personal letters, and some who used gray, the paper being of very fine quality. They are perfectly proper people, who have an unsatisfied longing sometime to wear a red necktie with their evening clothes, and sometimes a little of the yearning escapes in the colors of their

Throat specialists, throughout the world, recognize the efficacy of Formamint in preventing infection through the throat.

## Guard against infection

*Make this tablet your constant companion*

**T**RY as we may, we cannot escape the germs of infection. They are about us everywhere we go. Dust-swept streets, stuffy cars, stores, offices—any crowded place will breed and disseminate them.

Science tells us that they first lodge in the soft linings of the throat before invading the system.

So it is there we must attack and destroy them if we wish to avoid infection. Hence, the vital importance of the most careful throat hygiene.

Formamint, the germ-killing throat tablet, makes throat hygiene easy and pleasant. Little tablets, scientifically compounded, which one lets dissolve in the mouth, release a powerful yet harmless germicide which mixes with the saliva and thus penetrates into every fold, nook and crevice of the mouth and throat, searching out and destroying germs so they can no longer be a menace.

For more than 15 years physicians have watched the effects of Formamint and have testified to its splendid efficiency.

Public health authorities recognize and esteem the germ-killing properties of Formamint.

Use Formamint steadily as a protection against infection. Use it whenever your throat feels irritated or scratchy. Use it as a matter of personal hygiene.

private correspondence paper. One man I know always uses red ink for his personal notes—he would use red paper if he had a little more courage!

Generally speaking, the kind of paper used is a barometer of intelligence; the kind of envelopes used is a barometer of prosperity. One of the first signs of prosperity in the ordinary business is the use of finer stationery. A few old concerns are so independent and well established that they do not care what people think of the make-up of their letters. They may use the cheapest grade of envelope and only a slightly better grade of letterhead. A few still buy blank envelopes and put on the name and address with a rubber stamp. Many firms did this twenty years ago.

While women were the first to pay much attention to the appearance of their correspondence, men are now far more finicky. When I first went into business the boss always opened the mail. Now few executives ever see what sort of envelopes the letters come in, and too expensive an envelope for general purposes may be wasteful. The richest men do not use the most expensive letterheads or envelopes. The finest of all stationery bought by the "high class" swindlers is part of their stock in trade. Some very wealthy men put only their name on their envelopes; others put only their address; still others have only a post office box number. Most of them use a good box paper. Seven and one-half by four inches—somewhat larger than the ordinary business envelope—is the size most used by wealthy men for personal correspondence; that is, letters upon subjects outside the immediate run of the business.

Twenty years ago it was generally considered extravagant to throw away the envelopes in which the mail came, but they are no longer cut up for use as memorandum pads. Once everybody did this. I have heard an office boy lecture for his waste in throwing away envelopes.

**WE HAVE** known about envelopes for a long time, as I have said, but we have been using them only a comparatively few years—since the early forties. There is a reason for this. Before the "Penn Post," postage was computed by the number of sheets and not by the weight of a letter. The envelope counted as an extra sheet, and hence, to avoid paying double postage, the universal custom was to fold the sheet on which the letter was written into the shape of an envelope. The flaps of the folded letter were fastened together with a gummed wafer or a wax seal.

Nowadays we can hardly realize what task it once was to send or even to receive a letter. In the first place, you had to go to the post office—there were no collections or deliveries; and in the second place you had to be ready to spend good money to prepay your letter or to take out the letters that came to you "collect." Whenever a man went on a long journey he always expected to carry with him a great number of letters for delivery. The old generation was thrifty, to be sure, but we had to pay the postal rates of yesterday we, too, would hunt for friends to take them free. Postage the equivalent of seventy-five cents was by no means uncommon. The worst of it was that the

## “What Have You Read?”

*When that big question is put to you, you will be glad you learned the secret of 15 minutes a day. Send for the book that gives it*

**T**HERE will be a dozen competitors for your big opportunity when it comes. What questions will be asked by the man who is to make the decision among them?

This question, almost certainly: “What have you read?” Business leaders are asking it more and more.

“In every department of practical life,” said ex-President Hadley of Yale, “men in commerce, men in transportation, and in manufactures have told me that what they really wanted from our colleges was men who have *this selective power of using books efficiently.*”

Not book-worms; not men who have read all kinds of miscellaneous books. Not men who have wasted their whole leisure time with the daily papers. But those who have read and mas-

tered the few great books that make men think clearly and talk well.

What are those few great books? How shall a busy man find them? The free book offered below answers those questions: it describes the plan and purpose of

### DR. ELIOT'S FIVE-FOOT SHELF OF BOOKS

*The books that make men think straight and talk well*  
Every well-informed man and woman should at least know something about this famous library.

The free book tells about it, how Dr. Eliot has put into his

Five-Foot Shelf “the essentials of a liberal education,” how he has so arranged it that even “fifteen minutes a day” are enough, how in pleasant moments of spare time, by using the reading courses Dr. Eliot has provided for you, you can get the knowledge of literature and life, the culture, the broad viewpoint that every university strives to give.

“For me,” wrote one man who had sent in the coupon, “your little free book meant a big step forward, and it showed me besides the way to a vast new world of pleasure.”

Every reader of *The American Magazine* is invited to have a copy of this handsome little book. It is free, it will be sent by mail, and involves no obligation of any sort. Merely clip the coupon and mail it to-day.

**Send for  
this FREE booklet  
that gives  
Dr. Eliot's own plan  
of reading**

P. F. COLLIER & SON COMPANY

416 West Thirteenth Street, New York

By mail, absolutely free and without obligation, send me the little guide book to the most famous books in the world, describing Dr. Eliot's Five-Foot Shelf of Books, and containing the plan of reading recommended by Dr. Eliot of Harvard.

Save the surface and you save all.

sender of a letter did not have to prepay the postage—it could be collected when the letter was called for.

When Sir Rowland Hill began the agitation in England for the penny post—a flat rate of postage based on weight—one of the great difficulties was how to collect for the postage. He suggested that the Government sell a postage sticker to be used in the place of the old sealing wax. Such is the origin of the postage stamp; the flaps of the first envelopes were not gummed. The stamp acted as a seal, and it took a long time for the stamp to get around to the front of the envelope.

Not until the cheap post was well under way did a real demand for envelopes arise. We do not know who invented the envelope, but envelopes were being used in France as early as 1653. The envelope was invented first to gain privacy and second to hold extra enclosures. The very first envelopes might be considered the clay ones of the ancients. They often covered their baked clay tablets with a softer clay covering, which was in effect an envelope.

Once postal rates in this country became cheap, hand-made envelopes could not keep up with the demand. A number of men in the East at once started to make envelope machines. Several were made for George F. Nesbitt—one of the big men in the early history of envelopes—by Gerhard Sickles. Milton E. Puffer, a young pattern-maker and blacksmith employed by Cyrus White in his shop at Rockville, Connecticut, built a trial machine as early as 1853. Miss Mercy B. Rogers was the first operative on his machine and she required so much instruction—the thing was really very crude—that she became Mrs. Puffer.

**MAKING** envelopes has been largely an affair of inventing the right machinery, and many ingenious minds have contributed. Dr. Russel L. Hawes, a physician of Worcester, Massachusetts, has the honor of inventing and constructing the first practical commercial envelope folding machine in the United States.

The largest buyer of envelopes is the United States Government, both for its own use and for resale as stamped envelopes. But there is no government standard; the departments use what they like, from the cheapest manila to the highest grade kraft.

People sometimes ask, "Is it safe to lick the gum on the flap of an envelope?" It is just as safe to lick ordinary envelope gum as it is to eat tapioca, for the basis of most gum is nothing more than ordinary tapioca. It is the one who receives the letter, not the sender, who ought to bother whether the envelope has been sealed with the tongue.

In criminal proceedings the envelope does not figure as often as does the letter or document that it contains, but in all cases arising under the postal laws against using the mails to defraud, the passage through the mails has to be proved, and this can be done best by producing the envelope which bears the address and cancellation mark. If you receive a threatening letter, or any kind of a letter making representations on which you expect to act, it is well to preserve the envelope, or you may have trouble proving that you received the missive by mail.

## Sundstrand Advanced Features speed figure work

Business has always known there would some day be a better adding machine—one whose advanced features would permit speedier, easier operation—one of new and greater usefulness.

The Sundstrand is such an adding machine. This explains why Standard Oil Company, Sears, Roebuck & Company, International Harvester Company and many other leaders use from 15 to 100 each.

Convenient size and light weight are Sundstrand developments. You comfortably carry it to any desk or job.

Simple 10-key operation was perfected by Sundstrand. This increases speed and saves effort for beginner or expert.

Complete one hand control is a Sundstrand creation. Left hand is free to follow column of figures or turn checks.

Automatic column selection is another Sundstrand advantage. You automatically place units under units, tens under tens, etc., without wasting a single minute.

Added to this are advanced correction and protection methods—remarkable strength and reliability.

When you see the Sundstrand you will know that it is the adding machine you have long wanted. It sets up new standards in adding and figuring machine usefulness.

"The re-orders tell the story."  
May we send our leaflet "Testimony"?

Only 10 keys to operate

## Old Gideon—Detective

(Continued from page 23)

bottom to dis well of misery! Hit lead straight down to hell."

"When dey talk 'bout movin' to town?" demanded Gideon.

"Mr. Smif comin' arter Miss Betty an' Miss Cynthia befo' night," the old cook continued. "Dey ain't never comin' back. Somethin' tell me dat. Dey love dis ol' place. Dey live here all dey lives and dey pa befo' 'em. Whar me an' Ben gwine? I ax you, whar me an' Ben gwine do?"

So she spoke, leaving off her dishwashing and looking up at Gideon with distressed eyes. So she spoke, her mind being on her own affairs.

But the supernatural aspect of the phenomenon held old Ben in its thrall. The mystery of it occupied his mind entirely. "Runaway Cain," he said dreamily, "wait a long time. He a patient sperrit. But he done had he revengeance now!"

Out of the house Gideon came, and he was troubled. He had looked forward to several days of leisurely investigation—his temperament inclined toward leisureliness—and in the end a personal triumph.

No time now for this program. Before night the house would be deserted. There would be no occasion for the spirit of Runaway Cain to throw stones into vacant rooms. Gideon had failed. Last night he had accepted the title of Deliverer. While he sat on a box and watched, the ghost had come, committed his depredation, and vanished. The Deliverer hadn't delivered.

The yard was filling with negroes, and as Gideon came down the steps they crowded close to him. They were asking for a sign and he could give them no sign.

"Why ain't you cotch de ghos', Uncle Gideon?" demanded a young woman with an airy manner and a pink parasol.

He looked at her sternly. "You'll be a ghos' yo'self some day," he rebuked.

"When I is," she ventured, "maybe I'll let you ketch me."

**H**AD Gideon been a white man he would have flushed. As it was, his densely black, strong-lined face against which glistened the brass earrings, remained as unchanged as the stovepipe hat above it. But he had made a mistake in thus leaving an opening for impudence. There is only one course to follow under such circumstances. The prophets of old when hard pressed retired to the wilderness or to a mountain. Gideon, like they, must have time to think. Without another word he strode through their midst, crossed the fields and disappeared into the solitude of the forest.

The sun rose high, but he did not return. Afternoon had come and passed, and the shadows began to lengthen ominously when from the yard a murmur arose and all faces turned to the west. Across the fields, surrounded by a crimson aura, as if he had stepped out of the flaming ball of the sun behind him, Gideon was at last returning. His manner was assured and his stride was long.

He did not pause until he had reached the spot underneath the window of the bedroom that had been smashed last night. Here he stooped down and felt

carefully in the shrubbery. First he picked up a small object which he dropped quickly into his pocket. Then he fished out a large triangle of broken glass. The black folks watched him intently.

Next Gideon moved sedately to a circular flowerbed near the front walk. A luxuriant crazy-quilt of peonies, jonquils, and roses, it had spread out beyond its original boundary. Underneath this flower thicket he reached, and when his hand came out it contained four stones about the size of guinea eggs and of a pinkish hue.

The one touch of color in his otherwise somber attire was a crimson waistcoat. Across this was looped a heavy and tarnished watch chain, from the central point of which dangled a weighty locket, the symbol of some secret order—not of this world, it was said. Into the pocket of the unecclesiastical garment he placed the stones he had found in the flowerbed.

**S**ILENT now, for the sun was setting and the still unbroken window panes were the color of blood, the black folks followed him back to the house and as many as could do so up the steps and onto the porch. But only the servants and a few aged negroes went with him into the uncarpeted hall. On the seat of the hatrack he respectfully placed his high hat, bottom side up. As he did so he glimpsed the old ladies in their bedroom still packing trunks with trembling, reluctant hands. The widely scattered neighbors, they had sent away now, perhaps because they wanted this last hour alone with their memories.

They looked deserted and helpless in there. Even if his own reputation had not been involved, old Gideon, for their sake, would have tried to solve this mystery. How many times in his peregrinations had he and Delilah stopped there! Out in the barn Delilah had munched her dozen ears of corn and carefully masticated her sweet fodder; while in the kitchen he himself, at the old ladies' orders, had eaten his dozen pieces of fried chicken, together with innumerable hot biscuits with jam on them, washing the whole down with glass after glass of buttermilk, fresh and cold from the springhouse.

The shadow of a rock in a weary land, this house of the Pettigrus had been to any decent traveler, white or black, who sought its shelter. And now, its kindly spirits departed, it would go the way of all haunted houses. It would fall into decay; it would become the abiding place of bats and owls and scorpions. Weeds would choke its flower-bordered walks; hedges grow rank and look into broken windows; and above snake-infested weeds and hedges it would rise, forlorn, abandoned, to be stared at by day, to be avoided like pestilence by night.

Followed by servants and old darkies, all overawed and silent, Gideon entered the parlor where, as the last sanctuary of home, the furniture had been left undisturbed. Here, tall, majestic, mysterious, he turned and glanced over the faces of those behind him.

## Is Your Skin Like A Clear Stream - or A Muddy Swamp?

**S**OME faces you see fairly glow with thorough cleanliness. They are clear and wholesome-looking—good to gaze upon—faces that will stand the searching test of sunlight.

Others, apparently clean, are obscured by a certain cloudiness which denotes an impaired pore condition. There is a great difference between complexions as there is between a clear stream and a muddy swamp.

It is the difference between *really* clean and *nearly* clean. . . . Which is yours?

Today people are fast adopting the habit of *American white cleanliness*—pore-deep cleanliness.

They have learned that ingredients so often found in *impure* soaps offset the very purpose for which soap is intended—that they *clog* the pores instead of *cleansing* and *invigorating* them.

And this accounts for the increasing number of users of Fairy Soap, *the whitest soap in the world*. Fairy means more than *surface* cleanliness. Its mild, soothing lather reaches into the pores, leaving them free to do the work

which Nature intends them to do. After a Fairy Soap bath the entire body is not only thoroughly clean, but invigorated as well. *The body breathes*—and that is most essential to robust health.

Try Fairy Soap for a week. Its very simplicity will charm you. Constant use will prove that Fairy is soap in its purest form. Its whiteness and firmness endure to the last thin wafer. It floats. It fits the hand—and its small price fits every pocketbook.

**THE N. K. FAIRBANK COMPANY**

## HELPS THE BODY BREATHE

## Contentment

By EDGAR A. GUEST

*Sometimes I count my blessings o'er  
And find such splendid joys as these—  
The happy hearth, the toy strewn floor,  
The children down upon their knees,  
The door to kindly friends flung wide—  
This restful spot when evening falls,  
Where peace and harmony abide,  
And cruel malice never calls.*

Written Especially for  
John Lucas & Co., Inc.

## CONTENTMENT

Sometimes we forget that the full reward of work well done is not of a material nature. True contentment is found in the consciousness of work well done, of duties carefully performed.

Aside from the consideration of good business policy, Lucas has been actuated by these thoughts in striving for nearly three-quarters of a century to make the best Paint and Varnish Products which experience, science and personnel can produce.

### Write for the Book of Happiness

Book was written by Prof. A. J. Snow, Ph. D., Northwestern University, a recognized authority in psychology—tells what colors are conducive to comfort, restfulness, harmony, etc. FREE. Write Department 25.

Paints and Varnishes

Purposely Made for Rusty Purposes

Copyright, 1923, by John Lucas & Co., Inc.

"Close de do', bredderen," he commanded in a loud voice, "an' keep it closed."

Underneath one of the windows whose panes had been smashed sat an old-fashioned square piano. Its commodious top reflected without a scratch the fading dusk. Toward this instrument, like a musician reverently approaching, Gideon moved.

And now the negroes, crowded all together, saw what made them moan and weave back and forth, for Gideon was working "conjure." Above the piano he passed his enormous hands in ever-descending circles until they actually touched the polished top, where they felt over it, still in circles, until every part was covered.

Then while they stared with white eyeballs, slowly, sedately, his tall, gaunt figure outlined in the dusk, he went to the windows that bore most outrageously the evidences of mysterious violence. Before each of these he made his passes as if to insure them from further ghostlike visitations, his hands revolving slowly in circles, then touching the frames that had held the panes.

HIS followers made way for him as he passed through their midst, crossed the hall and entered the bedroom where the sisters were, and closed the door behind him. The old ladies were alone. They looked up at him. Both had been quietly crying. Imposingly Gideon raised his hands above them, and spoke in low but unctuous tones these amazing words:

"One mo' rock gwine fall. Den never anudder rock gwine fall!"

They sank into their chairs and stared at him.

"Dat is," Gideon went on with reassuring sanity, "dat is, if you trus' me and do what I say."

"Trust you!" gasped Miss Cynthia. "What—what do you want us to do?"

He went to the door, stooped down and placed his ear, then his eye at the keyhole.

"I wants you," he said, coming back to them, "to notify Mr. Smif when he come arter you, dat you has decided to stay on here. I wants you to notify all de udder folks to go to dey cabins and stay dar. Dey'll stay! I wants you to make out like you sleep. Den 'bout 'leben, when I comes up on dis side po'ch an' taps at de winder, I wants you to let me in silent an' secret."

"What do you know, Gideon?" demanded Miss Cynthia in a whisper.

"I know what's hid from mortal eyes!"

"Fiddlesticks! Gideon, are you—are you—a humbug?"

The mantle of mystery fell from his shoulders. His shrewd eyes began to twinkle. He spoke confidentially as if imparting a secret:

"No, miss, I ain't no humbug—not dis time."

Instantly she studied his face. What were these rumors she had heard about the police in the city having called him in more than once? Maybe he—

"We'll stay!"

"Cynthia!" gasped Betty.

Out on the porch, Gideon dismissed the darkies. He had no trouble in doing so, for the shadows were stretching far into the fields. The two ladies had decided to put their trust in the Lord, he said.

"It's mo' den I gwine do," said a stout

middle-aged man and started for his wagon, followed by his family.

And it was plainly more than Gideon himself was going to do! The small dismayed group of servants, as dusk and dread descended, saw not only the crowd depart but the Deliverer also. They watched him clamber into the seat of the sulky, arrange his long coat tails, pick up the reins and aim the head of the patient Delilah back in the direction by which she had come.

Then, as night closed in, they saw Mr. Smith, who had come after the sisters, turn his wagon round, toss up his hands as if to dismiss further responsibility, and drive off petulantly into the gloom.

And last, at orders from Miss Cynthia, who showed a white face for one who had put her faith in the Lord, they retired either to their own cabins or to other cabins farther away—mostly the latter. They did not see, two hours later, a tall form in a high hat that made its way stealthily across the fields, through the garden, and up on the side porch. At its guarded tap on the window, the door was opened, and the figure found itself confronted by two trembling old ladies, fully dressed though the night was late.

"I gwine stan' out here in de hall, close to de do'," he whispered. "I gwine leave de do' crack. One mo' rock gwine fall, and den never anudder rock gwine fall! Praise be de name of de Lord!"

He took his stand by the hatrack where, partly hidden himself, he could command the hall, the bedroom, and the parlor opposite it. Roundabout the front door were panes of glass, not one of which had suffered so far, and through their dim outline a sinking crescent moon cast into the hall a pale, bluish light, the kind that ghosts like to stroll about in.

He waited, upright against the wall, like some elongated figure in black armor set up in an ancestral hall. Once, in the alarming manner common to them, the stair steps cracked, and he started. Again, for no apparent reason whatever, in the dark, uninhabited regions up-stairs something cracked viciously. The pale bluish light crept along the floor past his feet and began faintly to climb the stairs. More than once with his coat sleeve old Gideon wiped cold sweat from his face.

THE bedroom clock, wheezy, querulous with age, had just ground out the stroke of two in the morning when somewhere a door opened guardedly. Cautiously, Gideon peered around the hatrack and as he did so he almost cried out. Down the hall, indistinct, almost invisible, the ghost was coming toward him!

It happened in an instant. There was a crash, a tinkle of glass. A stone rolled down the uncarpeted hall. A woman screamed. A stern voice, loud in its own relief from strain, echoed through the haunted house:

"I got you, Jezebel! I got you, daughter of Babylon!"

All roads led to the Pettigru house that brilliant hot Sunday morning. The rumor had got abroad that Gideon had caught the ghost, and throngs of black people were pouring in as to a great camp revival meeting.

Within the parlor, whose doors were closed, Gideon stood by the piano. He was all in black but for the crimson waist-

## It Might Have Been You!

A car-length gap in the splintered fence! Somebody went through! But your lamps point out the danger and carry you safely on. Unexpected hazards of night driving make safe, accurate lamps imperative.

You can entrust your safety to National MAZDA Auto lamps because they are accurate. Untiring research—dimensions to the thousandth part of an inch—weights down to the minute fraction of an ounce—these guarantee safety. They are as dependable as the large National MAZDA lamps you buy for the home.

When you need new lamps go to the National MAZDA lamp dealer. He sells the same lamps that are standard original equipment for 90% of all cars. There is a particular lamp for each socket. Look for the name. Verify the number on the base.

Each of these labels represents a Sales Division equipped to give a complete lighting service.

## Plan your European Trip for Mid-Summer

**I**F you are going to Europe this year plan *now* to go in late July, in August or September. The season is beautiful; the tourist rush is over; prices are lower; the days at sea are clear, temperate and delightful.

Send the information blank below and let your Government help you with your plans. Learn about the swift, luxurious U. S. Government ships operated by the United States Lines. They offer a passage for every purse; accommodations for every taste; and they are among the finest ships afloat.

The first class ships are:

**Pres. Harding, May 12**  
**Geo. Washington, May 19**  
**Pres. Roosevelt, May 26**

In addition, one of the five famous "cabin ships" sails from New York each Wednesday.

### Write today for—

A booklet of suggested tours costing \$405 and up, including steamship fare; a list of the chief events in Europe in Summer; your Government's handsomely illustrated booklet showing photographs of interiors of Government ships; full information about the United States Lines service. There is no obligation.

For information in regard to sailings address:

**United States Lines**  
45 Broadway New York City  
Agencies in Principal Cities  
Managing Operators for  
**U. S. SHIPPING BOARD**

INFORMATION BLANK  
To U. S. Shipping Board  
Information Section, 1962 Wash., D. C.  
E. G. S. S.

Please send without obligation the literature described above. I am considering a trip to Europe in the Summer of 1917.

coat and a clean celluloid collar and a narrow white preacher tie. His number sixteen shoes shone as bright as his triumphant face. In the presence of the delivered stood the Deliverer. Before him sat the two sisters, and also the sheriff. From the county seat that high official had heard the rumor and had driven out at top speed.

Gideon was speaking:

"In de fust place, I gwine ax you all not to tell 'em how I 'ravel dis mystery. I gwine give de discredit to de Lord. . . . You gits mo' yo'self dat way."

"From de fust," he went on impressively, "I suspicion dat no ghos' never throwed dem rocks. A ghos' can't pick up a rock. It too heavy. It slide fru his fingers. Den yistiddy I uncover some cu'us phenominings. Fust, dem rocks was indentical wid dem dat's hid right out here under de flowers in de front yard. Second, under dese winders, hid by scrubbery, was lyin' some ob dem rocks—lyin' loose—diagonally under de winders where dey fall. Thud, big fragrance ob glass had fall in dis same scrubbery—*outside* de house."

"Go on," said the sheriff.

"**L**ATER in de evenin' I uncover mo' things. Here in dis room I make out like I workin' conjure. What I was workin' was brains. De panes in dis winder above de pianner is mighty nigh all ejaculated, yet de top ob dis pianner, whar rocks from de outside would pantedly hit fust, ain't got a scratch on it. Furderno', I fin' some de frames in dese udder winders scarrified internally on de inside—prezackly like dey been hit by rocks frowed from de inside out!"

Gideon paused.

"What de conclusion ob de whole matter?" he demanded suddenly, as if he were in a pulpit. "Everything pint to one conclusion: it all pint plain as day. De enemy one ob de household dat pick flowers in de garden. De enemy standin' in de house and frowin' rocks out. De enemy operatin' conclusively and inclusively from de inside."

"But," interrupted Miss Cynthia, "the rocks *did* come from the outside. They smashed through the windows and rolled across the floor. I heard them with my own ears, I saw them with my own eyes!"

"Then," broke in Miss Betty, "there was no one in the room with us when the rocks fell but Ada. She simply could not have done it. Besides, she didn't have any reason to treat us that way!"

Gideon smiled at the old lady with the condescension of the worldly wise. "Oh, yes, miss, she have a reason. She long for de flesh pots ob Sodom an' Gomorrah. She want to go to town, but she's skeered to leave you an' break her pa's bond. So she gwine drive you away and go 'long wid you."

"That all sounds very well," spoke the sheriff; "but nobody can stand inside a room and throw rocks from the outside in!"

Out of his pocket Gideon extracted a massive and tarnished watch with a bold, audible tick. This he consulted, frowning.

He was to preach at noon at Mt. Zion church. His time was short.

"De Jezebel ob de Bible," he said impressively, and replaced his watch, "was a smart 'oman. But dere's one in dis house could teach her lessons. Sheriff, whar you got dat gal?"

"My deputy's holding her across there in de bedroom."

"I be back in a minute," said Gideon.

When he returned, he had his captive firmly by the wrist. In the center of the room Gideon stopped.

"Stan' dar, Jezebel," he commanded, and took his own stand in front of her. "Look at me, daughter of Baal. Look at me in dese eyes. Your pa bind you out to dese ladies with his las' bref—his las' breayin' bref. I been in communion wid his sperrit. He say he undoubtedly gwine ha'nt you—dat he never is gwine let up ha'ntin' you—unless you show dese ladies and dis sheriff what you been doin'."

Out of his waistcoat pocket he took two stones of pinkish hue.

"Yo' pa gazin' down on you!" he cried suddenly in a loud voice. "Don't grieve de holy sperrit! Aim straight, Jezebel! You had plenty practice. Aim straight, in de name ob Jehovah ob Jerusalem!"

The girl's face had not changed expression. It was too black for that. But her eyes, as if fascinated, had remained on the old fellow's strong, compelling face. Slowly, as in a dream, she took the stones, one in one hand, one in the other. As she did so Gideon stepped back.

It was done so quickly that no one whose eyes were not fastened intently on her would have comprehended. One hand shot to the right, the other to the left. A window pane tinkled, a stone rolled across the floor between the two old ladies. One stone she had thrown through the window; the other, at the same time, she had rolled across the floor.

Outside, came the murmur of amazed voices, and the sound of retreating feet. Inside, the three spectators had risen, and the sheriff, face flushed, was advancing.

"She wanted to go to town, did she?" he said. "Well, she'll go, all right!"

**O**UT on the porch Gideon faced his own people. Opposite the window that had lately been smashed there was a large vacant place in the crowd. His voice rang out above them:

"Das de las' rock ever gwine fall in dis house. So be it. Amen!"

They came close now. Here and there in the gathering, a white face, like some pale, abortive flower in a garden of colored ones, showed the symptoms of a grin. But there was no levity on the black faces.

"Tell us how you done it, Uncle Gideon!" cried a shrill voice full of awe.

The enormous hands were raised above them. The beaver hat glistened in the sun. The brass earrings, the watch chain, the mystic pendant, caught sparkles of red-hot sunlight. The voice that had shaken many a clappard church to its foundation thundered above their heads:

"De sword ob de Lord an' ob Gideon!"

"**CONFESSIONS of a Common Man**" is the title that "Ed" Howe, one of the best known and best loved American journalists, has given to a remarkable autobiographical sketch that will appear next month. Mr. Howe tells not only all about himself but all about you—as he has seen you through years of common-sense observation.

## Up the hill in high —

*No hesitation!* You swing around a curve. Then comes a long, steep slope. You step on the accelerator, but you leave the gear shift alone. With TEXACO Gasoline, the Volatile Gas, in the tank, your car gives you what you have a right to expect. No engine labor, no hesitation, up, up, and over in high — your car makes the grade easily, surely, steadily.

*Volatility is the readiness with which gasoline gives up its power*

And because of its volatility TEXACO Gasoline gives up its energy completely, instantly, providing you with maximum power for hill work or long pull, for burst of speed or steady grind—whenever you need it.

But that is not all: Fill up your tank with TEXACO Gasoline and your motor will from that moment give you easier starting, quicker pick-up, more sensitive acceleration and greater flexibility. These are

the qualities that make TEXACO Gasoline the perfect fuel in halting city traffic or in gruelling cross-country dash.

To get the full benefit of the maximum power of the Volatile Gas, use TEXACO Motor Oil. This clean, clear, golden-colored lubricant assures cleaner spark-plugs (good firing); snugger piston rings (full compression); cooler bearings (less wear); absence of hard carbon (no knocking); smoother, more responsive, better all-around performance of the car.

Remember the name—"TEXACO"—for both Gasoline and Motor Oil.

THE TEXAS COMPANY, U. S. A.

## This smoker says Edgeworth gets better and better

But it doesn't—and no  
"improvements" are  
contemplated

To begin with, we had better quote Mr. Whitlock's letter in full. Not in a boastful spirit, but so we can refer back to it farther down in the column.

2844 Accornac Street,  
St. Louis, Missouri.

Larus & Brother Company,  
Richmond, Va.  
Gentlemen:

I wish to take this opportunity to tell you what I think of your Edgeworth Plug Slice Tobaccos.

I have been a pipe smoker for about 18 years and during that time have naturally tried many different brands and blends of tobaccos. I could not seem to find an ideal blend until about six months ago when, at the suggestion of a friend, I tried a pipe of Edgeworth Plug Slice.

I have been a constant user of Edgeworth since and can truthfully say that "Day by day in every way Edgeworth is getting better and better."

You have my permission to use this letter in any way you may desire if by so doing it will enable other pipe smokers to find a really cool, enjoyable and perfectly satisfactory man's smoke.

I beg to remain,

Edgeworthly yours,

AL F. Whitlock.

We are indeed glad Edgeworth has given Mr. Whitlock such unqualified satisfaction;

but we feel obliged to sidestep his suggestion that "day by day in every way Edgeworth is getting better and better."

Our constant aim is quite to the contrary.

Just as it is Edgeworth pleases thousands and thousands of pipe smokers throughout the country.

If we should try to "improve" Edgeworth or change it in the

least, we might be doing an injustice to the men who have smoked Edgeworth for years and years and who expect to find it always the same good smoking tobacco.

To add to our list of friends we are always glad to send free samples of both Edgeworth Plug Slice and Ready-Rubbed.

Just drop a postcard to Larus & Brother Co., 25 South 21st Street, Richmond, Va. If you will also add the name and address of your tobacco dealer, we shall appreciate your courtesy.

**To Retail Tobacco Merchants:** If your dealer cannot supply you with Edgeworth, Larus & Brother Company will gladly send you prepaid by parcel post a one- or two-dozen carton of any size of Edgeworth Plug Slice or Ready-Rubbed for the same price you would pay the jobber.

## They Have Tempers, Too!

(Continued from page 68)

of "perfume!" or the aroma of animals.

On the circus, life is a matter of constant travel. The show is here one day, a hundred miles farther on the next, while, always a day in advance, is an overworked individual called the "twenty-four-hour man," whose task it is to provide the circus with everything it needs, even to the meat which is fed to the carnivorous animals. Inevitably, there are various grades and conditions of meat. One day the food will be a cold-storage product, on the next perfectly fresh, and, perhaps, on the third, slightly tainted. The result is indigestion on the part of the cat animals, a headache, a bad appearance, dull eyes, and a mammoth frown.

As to the headache by itself—have you ever noticed that a menagerie carries a peculiar odor all its own? That's what brings the headache, too much "aroma."

Every cat animal gives off this particular body odor, which is saturated with the fumes of ammonia. The result is that, unless there is plenty of ventilation, the ammonia so loads the air that breathing it clogs the brain and brings a terrific headache.

In the summer, the beasts suffer on "long runs" where the cages are boarded up for an unusual length of time; there is not sufficient air circulation to carry away the ammonia smell, and the result is an ear-splitter of a headache. It's often also the cause of some twenty or thirty encounters that may run all the way from a sharp spat between two caged animals to an actual murder! Which explains the fact that on hot days—if you've ever seen a circus on the move—the side boards often are let down from the cages, and a virtual menagerie display of cat animals is given by the show train as it moves through the small cities along its route to the next show stand.

**T**HE surest way to bring bad temper to an elephant is to neglect his feet. The great weight of the beast and the constant succession of pavements he treads cause corns between the big toes, or great patches of callus on the ball of the foot; unless these are carefully "chiropodized," there is a bad elephant in the herd. An elephant weighs from two to three tons. You can imagine that weight pressing on a corn!

The same, in a measure, is true of the cat-animal keepers, except that their greatest care for the feet of the beasts must concern the claws, lest they turn back into the flesh.

On a circus with which I once was connected was a big leopard that was considered the most tractable of the whole group of performing "pards." One morning when the cage was opened it was to reveal a hissing, red-jawed brute, his body splashed with blood, and his mate dead in a corner of the den. An investigation brought the reason—he had been maddened by the pain of a claw which had turned back into his flesh, and which drove like a knife thrust with his every step! The animal men charged it to mental aberration, and let it go at that.

For even with animals they've encountered insanity in its true form—even hallucinations!

It came in the being of Buddha, a great beautifully striped Bengal tiger on the Hagenbeck-Wallace Circus a few years ago. The beast was one of a performing group, and trained to refuse to enter its den at the conclusion of the arena performance until the trainer, apparently at the end of his resources, would bring forth his revolver and fire twice. Then the tiger would turn, and with a rush seek its cage, making a leap of some ten feet at great speed for the entrance. However, one afternoon, it misjudged, leaping slightly to the right, with the result that it struck its head with crashing force against one of the steel uprights of the arena. For a second it scrambled wildly, then dropped to the ground. The trainer, seeing that the beast was unconscious, hurriedly unstrapped the arena gate and allowed the entrance of assistants, loading the stricken tiger into the cage by their aid. Once out of the circus tent, he worked over the beast until consciousness returned, then boarded the cage up for the day, believing that rest and darkness would repair the damage. But the next morning!

**T**HE glare of insanity was in the great cat's eyes when the side boards were removed. It hissed. It roared. Then it leaped as the trainer sought to approach. In vain the friend of other days tried to soothe it—all to no purpose. And the queer thing was that the gaze of the striped brute was so far above the head of the trainer that when it leaped it struck at the steel bars at the very top of the cage. A hurry call was sent for Burt Bowers, the owner-manager, and that wise old showman stood for a long time in thought.

"Bring me a piece of canvas," he ordered at last, and an animal man hurried to comply. Bowers placed the fabric on the end of a stick and pushed it to the very bars of the cage. The beast growled, hissed—then leaped again. But the claws struck the steel of the bars, a full two feet above the offending canvas! Bowers grunted.

"Hallucinations!" he announced. "Sees everything about twice as big as it really is. That's why it strikes so high."

Following which test after test was resorted to, with the same result and the same verdict. Rest and darkness, pampering and quiet did not aid, though the circus men strove for months to return the tiger to its natural self. At last came the only remedy for a suffering thing—a shot from a high-powered rifle, and the entry of a menagerie loss in the cause of humanity.

Fear—fear of man, of unusual happenings, even of a flag which drops awry and flaps against the bars of a cage—is the biggest problem that the animal trainer has to face. The minute an animal becomes possessed of fear he becomes possessed also of murder, nor is his best friend, man or beast, exempt from the effects of the desire to kill the first thing

he sees. Mabel Stark, one of the widely known women animal trainers, bears many a tiger scar—simply because a "townier" horseman insisted on riding too close to the cage which she occupied with three tigers during a parade.

So, you see, the elementary emotions play their part all through the list, even to that of ambition! There is not an elephant herd in the country the history of which does not include a terrific fight engendered either through the application of superior power or rulership, or the desire to attain it. From the jungle to the menagerie, there is a law in elephantdom that every herd must have its leader and ruler. That ruler's word is final—and, incidentally, the power lies in the hands of a female! As a rule the males obey implicitly until the approach of cool weather in the autumn, and then, when their eyes begin to cloud with *must* the rebellion begins! *Must* is the East Indian word for badness, and once that *must* seizes a male elephant, his first desire is to defy the leader and to break every elephant-law of the herd. The result all too often is a battle!

A battle, if you please, in which the combatants are two- or three-ton things of armorlike skin, and tremendous bones—an elephant can survive a crash through a ten-inch brick wall without even a headache! So, that, until drop-forged chains, deep sinking bull hooks—sometimes volley after volley of steel-jacketed bullets—bring an end to the titanic struggle, the two beasts lunge and butt, smashing at each other with their heavy trunks, stamping, kicking, and striving for a death blow with their tusks, until they either are pulled away from the fray by the other elephants, hitched to the ends of tremendous chains, or one of the two is beaten senseless and breathless to the ground, when, as though by some law of clean fighting, the battle is declared over.

In one circus herd a single elephant, Old Mom, more than a hundred years of age, and a leader of leaders, has whipped every subject under her command! She even butted one of them through the wall of the menagerie house in Denver, Colorado. After that, he was good!

GREED and avarice, too, are always present. The exemplification of greed is especially apparent at a time when one would think it farthest away—at the time of mating. When the springtime comes and the birds twitter in the trees, when the young man walks up the maple-lined street with a box of candy under his arm, and when the unselfishness of love is in the air, that is when the cat animal of the menagerie becomes greedy. The lion or the tiger doesn't woo his wife by offering her the best of the portion of horse-meat that is shoved to him through the bars. Instead, he eats his supply as rapidly as he can, then rushes toward his mate, gives her a good wallop on the side of the head, and takes her breakfast away from her. Or, if the mate happens to be a bit stronger than he, she does the robbing.

Although the lion may be the king of beasts in looks, actions, and honor, he is far from it in fighting ability. The clash between the lion and tiger generally ends in a victory for the striped beast. In several encounters between "King Edward," a big black-maned Nubian, and "Dan," a Royal Bengal tiger, the "king of beasts"

had moved out second best. Evidently Dan realized the fact, for when the two were in the arena together it was a constant succession of bullying on the part of the tiger, of cuffing matches, in which the striped beast stood on his haunches and slapped the lion with quick, shifting blows, for all the world like those of a light-weight boxer, and of rumbling growls which sent King Edward hurrying to his pedestal whenever he came in the proximity of his enemy. But at last there came a reversal.

They were cage-mates; that is, they occupied a cage together, but not in company, if it can be explained thus. A two-inch wooden partition divided them, and while each had half a cage, neither ever was actually placed with the other. For several days King Edward had been "off feed," and to tempt his appetite, Lucia Zora, his trainer, conceived the idea of feeding him a live chicken. The fowl was thrust between the bars to squawk and flutter wildly, and at last to be captured in the big claws of the excited lion, which, like some overgrown house cat, began to toy with the tidbit for a moment before devouring it. But just then a new element entered—Dan, the Bengal.

THE tiger had scented the fowl and noticed the commotion on the other side of the cage. Frantically he had begun to work at the partition which divided him from the lion; finally, in some way he loosened the clamp, then raised the dividing board, even as a person would raise a window, and rushed through toward King Edward.

But this time the lion did not skulk away. Instead, he turned, a raging engine of destruction, and the fight that followed was the fiercest thing that the menagerie had seen in years. The animal men sought to separate them. It was useless. King Edward had reached the end of his submission, and Dan, through his greed, the end of his life. For the lion, disregarding all the usual leonine methods of fighting, suddenly adopted the tiger's tactics, attacking from a position straight on his haunches, and with both forepaws working, instead of the usual one. The result was that soon the tiger's claws were tangled in the greasy, heavy, armor-like mane of the lion, while those of King Edward ripped at the foe until Dan sank to the cage floor, a stricken, gasping, disemboweled thing. Then, and not until then, King Edward ceased his attack, disengaged his mane from the now useless claws of the Bengal—and went back to his feast!

The usual end of a quarrel which has its inception in greed or avarice is death. And those elements can be typified in queer incidents. An ostrich possesses three things: the smallest brain of any bird or animal of its size, the most powerful kick of anything except a mule, and a positive obsession for anything that glitters. A few years ago the John Robinson Circus made a feature of two ostriches trained to draw a small cart in parade and in the entrées, keeping the big birds in a net-wire enclosure in the menagerie tent as an exhibition. The owner of the circus, Jerry Mugivan, possessed a large diamond ring, and it was one of his amusements to raise his hand over the enclosure and watch the antics of the weak-billed birds as they strove vainly to pull the glit-

# STUDEBAKER

THE BIG-SIX TOURING CAR \$1750

You would not buy a house with five rooms if you needed seven—don't make this mistake in buying a motor car.

Crowding always means discomfort. This is just as true of motor cars as it is of houses. The pleasure is taken out of driving when everybody is cramped and uncomfortable and the children have to sit on some one's lap.

Then, too, with a five-passenger car you often have to leave friends at home when you would really like to take them along.

The Studebaker Big-Six Touring Car provides genuine comfort for seven and when the two auxiliary seats are folded away, it becomes an ideal five-passenger car with room enough for all the luggage you will need or want to carry.

The Big-Six Touring Car affords this roominess without excess weight or

bulkiness. It also provides every other essential for lasting satisfaction at a moderate initial outlay and low cost of maintenance.

Its appearance is expressive of power and stamina. Its performance—acceleration, flexibility and day-in-and-day-out dependability—is known and respected throughout the world.

No car, regardless of price, has finer or more complete equipment. This even includes an extra wheel complete with cord tire, tube and tire cover.

Both body and chassis are built by Studebaker. This insures highest quality and because of the elimination of parts-makers' profits, the greatest value for each dollar invested.

The name Studebaker stands for value, dependability, comfort, and integrity.

# Why

does 1 out of 20 babies die  
in the first six weeks?

Whose fault is it?

How can you keep *your*  
baby safe?

These and a thousand other pertinent questions relating to the care of babies are authoritatively answered in this little volume.

## FREE

while the edition lasts

Baby's Welfare is a book no mother can afford to be without. It contains exactly the information you need—valuable and practical information about the care and feeding, and the safeguarding, of your baby. *It is not meant to take the place of your own physician's advice and counsel, but you will find it a constant source of help.* Many young mothers live in a continual state of fear and worry over their babies. Yet it is all so simple when you have a guide which you can rely upon.

Baby's Welfare is such a guide, a scientific, authoritative little volume written by a physician. It tells you just exactly what to do at every step of the way, and answers a hundred health questions that are bound to arise in the household where there is a young baby.

Your baby's food is most important. Nurse him if you can. If not, feed him with Eagle Brand, the famous baby food—more used than all others combined. It's pure, digestible, safe.

tering stone from its setting. Then one day a loose prong allowed the gem to drop within the enclosure!

A wide-eyed and somewhat excited Jerry Mugivan gulped as he saw two thousand dollars' worth of diamond fall into the straw and the two ostriches rush wildly for it. Then his eyes grew even wider as one of the birds raised a heavy foot and, with a straight outward kick, sent his be-plumed companion reeling half across the enclosure. However, before the kicker could reach the diamond, the kickeer was back on the job again, to release a series of blows—and the fight was on.

It continued for a half an hour, and ended only when one of the birds, by a swift and well-aimed blow, caught his adversary just at the junction of the neck and head, decapitating him. By that time, all idea of what the fight was about had left the tiny brain of the victor, and gasping, his wings raised, he wobbled to a far end of the enclosure and settled there, while Mugivan thrust a hand hurriedly into the straw, rescued his diamond, and rushed for a jeweler.

"Lucky at that," he mused as he went out of the menagerie entrance; "you can buy ostriches for a hundred dollars apiece!"

SO THE list runs, even through to that of racial hatreds. The oft-repeated chase of the dog and cat, and the hatred which seemingly is never overcome between them, is repeated in the menagerie, with the exception that here it is the cat which chases the dog. It is almost impossible to work a leopard group in the same arena or ring in which a dog act has been worked; the canine scent arouses them to such an extent that they can think of nothing but hunting their hereditary enemy. The same is true in a measure with tigers, and in a lesser degree with lions. A few instances have been known where lions and dogs actually have become friends—but with a tiger or leopard, never.

In fact, the only thing that can arouse greater excitement among felines than a dog is that outcast of the animal world, the hyena. Here the racial lines are drawn sharp and distinct. It is an enmity which is at high pitch always; the very proximity of a hyena cage will drive a tiger or leopard to madness, and if a feline ever is placed in a compartment opposite to a hyena, it never will cease its efforts until the day comes when some careless animal attendant leaves the partition door unclamped, and when the big cat can claw and tear until it raises the barrier and rushes through to annihilate its foe.

In lesser degree is the hatred of a tiger for a horse, the hatred of a puma for a bear, the hatred of a chimpanzee for an elephant.

Just as a warning, if you are a father or mother, and you decide sometime to take your baby to the circus, never allow it to get within "reaching distance" of a leopard's cage. Why, no animal man can explain, but the hatred of a leopard for a baby amounts almost to a mania.

So the list of emotional causes for menagerie quarrels is nearly run. But there remain two things in which the line is rather closely drawn between the beast and the human. One of them is the irrita-

tion of annoying things and the other is just general cussedness.

Have you ever been in a crowd, a tremendous, jostling, packed crowd where everyone is talking at once, where somebody steps on your toes, where the air is stifling and there doesn't seem room to breathe? And have you ever been able to come out of one of those crowds with your temper actually whole? The same is true of animals. In several cases the beasts have been known to vent their rage upon the crowd itself, and there is the constant danger that someone will be pushed too close to the cages. This would mean the instant extension of a poisonous set of claws, a roar, and a slashing blow which might mean death. So, while the crowd may protest, the circus knows best—and closes the cages.

Cussedness? There are just two things to remember: Never try to make friends with a rhinoceros or a camel. They are the two crabs of the animal universe—evil-tempered, selfish, mean, and vengeful. Not even the animal attendant knows when a rhinoceros is going to turn upon him; there does not seem to be a single element of the big, armored beast's nature that admits of friendliness.

The camel is the supreme grouch of the menagerie. He's never in good temper. He's the bestial dyspeptic of the universe, and he carries a weapon in his mouth that is worse than the far-heralded perfume of the polecat. When a camel decides that he doesn't like you, he gives you his cud with an aim that would cause the crack-hitting tobacco chewers of the country store to curl up in envy. And once you've become the owner of that cud, splattered over your person, the best thing to do is to hurry to the nearest store and buy yourself a new suit of clothing!

But the cud isn't the only weapon of the camel. His temper is such that he uses everything available, teeth, head, and hoofs! He can kick like a bay steer, butt like a goat, and bite like a steel vise. Once he decides upon a dislike, he doesn't stop until he has made use of every item of armament. But there's at least one redeeming feature—once it's all out of his system, it's out!

IN THE circus, when an animal man discovers that he is the recipient of dislike on the part of the camel he doesn't attempt to cajole or threaten. He merely plants a bale of hay upon his back, covers this with a piece of canvas, then, walking close to the camel, does or says something to irritate the beast. There follows a quick thrust of teeth or hoofs; whereupon, the animal man dumps the "dummy" on the ground and quickly moves to the nearest hiding place. The camel doesn't even notice him—its vengeful thought is bent upon that thing on the ground. For fifteen minutes the "slaughter" continues; the beast kicks the canvas-covered hay, bites it, spits upon it, butts it, and tramples it. After which the animal man can approach with impunity. To the camel, the old animal man is dead—killed during a personally conducted slaughter. This new person he treats as though it were someone he never had seen before, and all malice is gone.

In which, perhaps, was the beginning of that old circus axiom:

"If you can't beat 'em—jine 'em!"

Buick's continued adherence to its fundamental policy of providing exceptional luxury, refinement and completeness in all Buick models has produced these desirable qualities in Buick cars to a degree exceeded only by the costliest, custom-built automobiles.

The new Buick 4 cylinder Sport Roadster, which was introduced at the National Automobile Shows, is a typical example, as well as the most recent Buick achievement.

Always, with each succeeding Buick model, a new standard is created by the exceptional value that it provides.

## Your Keys to Success

**SYSTEMATIC** saving and systematic investing are the keys to success. You can build a comfortable fortune in a surprisingly short term of years in this way. For example—

Invest \$1,000 at 6%; re-invest the interest; add an average of \$358 every six months. In 15 years you have \$19,000.

Invest \$2,000 at 6%; re-invest the interest; add an average of \$37.83 twice a year. In 5 years you will have \$3,000.

### CONVERSELY—

If you want to build a fortune of \$10,000 in 10 years, invest \$5,536.80 at 6%, reinvesting the interest.

If you want to amass \$10,000, from a start of \$1,000 at 6%, add an average of \$358 twice a year—in a little over 9 years you will have \$10,000.

The above are condensed from detailed tables in our new booklet, "How to Build a Fortune," which we will send without cost or obligation to anyone genuinely interested in saving and investing. Write to-day for

## THE FAMILY'S MONEY

# Put Not Your Trust in Money But Put Your Money in Trust

I AM forty-one years old, unmarried, and have no dependants. I have been practically self-supporting since I was twenty. And yet every cent I have in the world to-day has been saved within the past five years—some five thousand dollars in income-producing securities, four thousand in land not income-producing, and some endowment insurance, most of which has about fifteen years yet to go!

From 1901 to 1903, I earned \$240 a year. I lived at home, and could look to my father for any extraordinary expenses. I should have saved \$50 a year. I didn't save a cent. Even the \$150 I didn't save in those three years, compounded at the savings bank at four per cent, would be a sum not to be despised in 1923. Think it over, you people who can save only a dollar a week.

The next year I borrowed enough to take a year's special training, and from 1905 to 1910 I earned up to \$500 a year. I paid back the loan, and I should have saved at least \$100 a year, but did not.

In 1913 a big opportunity jumped my salary from \$600 to \$1,560. A year later it went to \$2,600, two years later \$6,500, and for the past five years it has been comfortably over five figures.

It wasn't till 1915 that I took out any insurance or started a savings bank account. The trouble with savings banks for butter-fingers like mine is that they are so confoundingly accessible, and the bank I was patronizing then was open all the evening, at that. I'd put in twenty dollars and run in after dinner a week later and draw out ten.

It took a World War to compel me to save. I was eager to do it by that time, but usually slipped back one step for every two I went forward. *The accessibility of savings is the undoing of most of us.*

Buying Liberty bonds on the installment plan was a revelation to me. How the money piles up, at so much per week! I resolved to buy other bonds the same way.

THEN the real estate craze hit me, and I cashed in all my Liberty and other bonds, and bought land—\$4,000 worth.

After this venture I increased my endowment policies from \$3,000 to \$12,000, started a building and loan association account of fifty shares, and kept myself rather heavily in debt to my broker for installment plan bonds. An expensive way of buying them, incidentally.

When my building and loan account reached \$500, I cashed it in—not having provided sufficiently for the income tax. There was the *accessibility* again!

A year ago, when I was entitled to forty candles on the birthday cake, I made a solemn vow—I'd save if it killed me!

And this is what I did. And I wish to heaven I'd headed up this path twenty years ago. Twenty years! Why, I wouldn't have had to work these full

twenty years. I'd be taking that trip to the Orient this week, instead of ten years from now.

I took out everything in my safe deposit box that was income-producing and ran up to the trust department on the banking floor to establish a voluntary trust. The sum was \$4,340. *Now all the income from the fund is being turned back into the principal. That's making your money work for you, with the maximum speed consistent with safety.*

As soon as I got back to the office, I went to the auditor and cut my salary check thirty-three per cent. In other words, when the pay check comes around, it is for two thirds of what it used to be, and the other third is nestling in the company's books. And when those little thirds total up a thousand dollars, the auditor makes out a check and sends it down. I endorse the check over to the trust company and put it in the mail.

ANY trust company will handle a voluntary trust fund, and a great many national banks are establishing trust departments.

The bank or trust officer will draw up the agreement of trust for you. In fact, you haven't a single thing to do except to take your money to the trust officer, tell him what you want done, sign the agreement of trust, and read their annual statement of accounting. Yes, one thing more: *add to it systematically.* And don't forget to say that the interest (or income) is to be reinvested by them. They are not to pay it to you.

You and the bank or trust company enter into a compact. You make a deposit and agree to make other deposits from time to time. The trust company agrees to protect, invest, reinvest, and keep your money for you, deducting a small fee charged for services. Each deposit is to be added to, and will constitute a part of, the trust fund. You can make a provision that in case of your death the fund becomes a part of your estate; you can name a beneficiary; or you can provide that the fund is to continue for certain uses designated by you. In case you wish to terminate the trust and withdraw your savings you can do so by giving the company notice in writing.

The details of this plan must vary according to circumstances, but the plan itself will build a structure that will give you leisure and peace of mind in years to come and a sense of poise that is the biggest asset a young man can have as he builds toward the future.

If this story causes you to start a fund, with compound interest tied to it, and to send in regular additions to it, I shall be glad indeed. But if it leads you merely to figure on the back of an envelope what your savings with compound interest would be in ten years, I shall be satisfied. You will do the rest without any urging. H. B.

THE general attitude toward the Hupmobile is worth recording, because it goes to the very root of wise automobile buying.

People in the mass do not continue to see superiorities in a motor car over a long period of years, unless the superiorities are actually there.

And it is an indisputable fact that motorists in the mass do spontaneously, continuously, testify to those merits in the Hupmobile which make it the wisest, soundest purchase possible in its class.

## Authorities recommend bacon for children

*It supplies energy in abundance and is easy to digest*

Romping, running, in all their waking hours hardly ever still, children lead incredibly active lives. It's natural; they should.

To sustain this activity, however, they must have plenty of fuel food.

That bacon is exceptionally high in fuel value is shown in all nutrition charts. It is, moreover, easy to digest.

That is why all prominent physicians recommend bacon early in the child's diet.

If you will look in the books of Dr. Isaac A. Abt and Dr. Julius H. Hess, both noted baby specialists, you will find it listed for the end of the first year. Even soft-cooked or poached eggs come later.

The bacon that children are given, however, must be well cooked, crisp and brown.

For this reason, Premium Bacon in the cartons is especially recommended. In the cartons you get this finest of bacon already sliced, and in such uniformly thin, even slices that proper cooking is easy.

It is, of course, somewhat more economical to buy a whole side of Premium Bacon. From this generous family supply, thin slices for the children can be secured with a little extra care in cutting.

In either form, Premium Bacon comes in sanitary packing that keeps it clean and wholesome.

Makesure that the bacon you buy bears the mark Swift's Premium.

Swift & Company, U. S. A.

# Swift's Premium Bacon

### How to cook bacon for children

*quoted from Dr. Isaac A. Abt's book, "The Baby's Food"*

#### Broiled Bacon

Put thin strips on a broiler. Place broiler over a dripping pan and bake in hot oven until crisp.

#### Fried Bacon

Heat fry pan very hot. Put in thin strips of bacon. As fat is drawn out, pour it off. Cook bacon till crisp and brown.

#### Diet: 1-2 years

*(from Dr. Abt)*

#### 10 A. M. Feeding

Cereal with part bottle  
Crisp bacon (after the 14th or 15th mo. alternate egg with bacon)  
Toast or zwieback  
Bottle

#### Breakfast Menu

*(from fourth to tenth year)*

*quoted from Dr. Dorothy Reed Mendenhall, Extension Service, Univ. of Wisconsin*

Orange, cooked apples, stewed prunes  
Dish of well-cooked cereal  
Soft-boiled egg, or bacon.  
Glass of milk  
Bread and butter or toast

## If you bought only *one* new Victor Record a week

you would have such a treasury of music as could compare only with the great libraries and the great art galleries of the world. You would have a source of untold satisfaction for your every need. The musical genius of the world is graved on Victor Records—not the printed page of music, but the music itself.

Victrola No. 300  
\$250  
Victrola No. 300, electric, \$290  
Mahogany, oak or walnut  
Other styles \$25 to \$1500

Schools and Colleges for Girls

## FOR GIRLS

### Mount Ida School

6 miles from Boston

Send for New Year Book

We send students to college on certificate and examination. Many girls, however, after leaving high school do not wish to go to college. But often they desire advanced work in a new environment with competent instructors, and to select studies best meeting their tastes and interests.

We offer just these opportunities. Students take English or Literature, but the course otherwise is elective. All subjects count for diploma. Graduation from high school not necessary for entrance.

All the opportunities of Boston in Music, Art, and historical associations are freely used. Special work in Voice, Piano, Violin, Cello, Harp, and Pipe Organ, with eminent Boston masters.

**Outdoor Sports.** 8 acres for athletics. We make a specialty of Horseback Riding (our own stables); Golf Course; Tennis, both grass and dirt courts; Field Sports; Canoeing. Our Gymnasium is 45 by 90 ft., with Swimming Pool.

A finely equipped school—nine buildings.

Domestic Science, Elocution, Costume Design and Home Decoration. **Excellent Secretarial Courses;** Courses in Business Management; Junior College Courses.

Some rooms with hot and cold water. Students for 1923-24 are being accepted in the order of their applications.

Special rate for Western girls from Chicago Sept. 25.

For application of admission form and a detailed prospectus, write to: **1656 SUMMIT ST., NEWTON, Mass.**

Schools and Colleges for Girls

## Bradford Academy

A school with a notable record in the higher education of women. Founded in

1803. College preparatory courses of two and three years. Also a junior College Course for High School Graduates. Campus of 25 acres and athletic field of 12 acres. For catalog address

**MISS MARION COATS, A.M., Principal**  
Box 172, Bradford, Mass.

## Glendale

Founded 1853  
**Junior College and Preparatory**  
Glendale, Ohio  
near Cincinnati

Distinctive school for young women. Delightful home atmosphere. Careful individual guidance. Ideal conditions for learning. Suburban village noted for its beauty and culture, easily accessible to the art and music attractions of Cincinnati. \$800, including music. Address

**Thomas Franklin Marshall, A.M., Ph.D.**  
President, Box 4, Glendale, Ohio

## VIRGINIA COLLEGE

For Young Women. Roanoke, Va.  
One of the leading schools in the South. Modern buildings. Extensive campus. Located in the Valley of Virginia, famed for health and beauty of scenery. Preparing and College Courses. Music, Art, Expression, Home Economics, Secretarial Courses, and the Honors of Literature and American Literature. Supervised Athletics. Students from 42 states. Catalogue.

**Martin P. Harris,**  
President  
Box A

Mrs. Gertrude Harris-Baerwright, Vice-President

## Virginia Intermont College

For Girls and Young Women

Beautifully located in the mountains. High school and Junior College courses. Music, Art, Expression, Home Economics, Secretarial Courses, Latin, Spanish, Outdoor sports, Gymnastics, Swimming, and more. New dormitory with private baths. Rate \$200. For catalogue and more facts, address **H. G. NOFFSINGER, President, Box 135, Bristol, Va.**

## DARLINGTON

Founded 1861  
For young women  
Develops personality, character, efficiency, self-reliance, physical, intellectual, emotional, domestic, spiritual. Physical Education, Art and Music, College Preparation Courses. All subjects, Gymnasium, swimming pool. Catalogue, **Christine F. Bre, Principal, Box 446, West Chester, Pa.**

**YOUNG WOMEN**  
**Randolph-Macon Institute** FARMER, Va.  
Preparatory and college courses for young women. Located in the heart of the Shenandoah Valley. Catalogue, **Miss Mary E. F. Bre, Principal, Box 446, West Chester, Pa.**

## CHEVY CHASE SCHOOL

Located in the heart of Chevy Chase, D.C. College preparatory and college courses for young women. Catalogue, **Chevy Chase School, Box A, Frederick Ernest Farrington, Ph.D., President, Washington, D.C.**

## The Colonial School

For Girls  
In the heart of Washington, D.C. College preparatory and college courses for young women. Catalogue, **Miss Christine, President, Box A, Washington, D.C.**

## Lindenwood College

Fifty minutes from St. Louis

The pioneer college for young women of the Northwest. Founded 1827. Two and four year courses leading to degrees. Liberal Arts, Fine Arts, Home Economics, Business Administration.

**School of Music of Unexcelled Merit.** 114-acre campus. Unexcelled facilities for golf, hockey, tennis, all outdoor sports. Gymnasium, swimming pool. For catalog address

**J. L. ROEMER, D.D., President**  
Box 323, St. Charles, Mo.

## Posse Normal School of Gymnastics

Massachusetts, Boston, 779 Beacon Street.  
For women, also men. Modern building. Courses of one, two and three years. Present conditions have created great demand for our graduates. Courses in Medical Gymnastics and Pterygoid. Summer Camp. Apply to **THE SECRETARY.**

**FERRY HALL** College preparatory, general high school and advanced courses. Also special instruction in music, expression and domestic arts and sciences. Located in a well-known residence, suburb on the shore of Lake Michigan, 28 miles from Chicago. For catalog, address **Mrs. Frances H. Ferry, Prin., Box 725, Lake Forest, Ill.**

## PEACE INSTITUTE

Est. 1857  
For Young Women. College course or preparation for standard colleges. Diplomas in Piano, Voice, Art, Expression and Home Economics. Special training for Business and Secretarial Work.  
**Mari Owen Graham, Pres., Box A, Raleigh, N.C.**

## Fairfax Hall

For girls. In the Blue Ridge Mountains, 4 hours from Washington, D.C. Junior College and Preparatory. Two main two year courses. College preparation, 1 year graduate work. Music, Art, Home Economics, Expression, Secretarial, Bookbinding, bookbinding building, 21 acres. Latin, Greek, French, German, Spanish, Italian, and more. For catalog, address **John Noble Maxwell, President, Fairfax Hall, Box A, Basic, Va.**

## The Gateway

A school for girls, offering regular college preparatory work. Also four year, General and Special Courses.  
**Miss Alice E. Reynolds, Principal**  
St. Roman Terrace, New Haven, Conn.

## HOLLINS COLLEGE for WOMEN

Hollins, Virginia  
Founded 1842. Standard College Courses for the Bachelor of Arts and Bachelor of Science degrees. Admission by preliminary examination. 325 students. For catalogue address **Ms. HOLLINS COLLEGE, Hollins, Va.**

## ST. MARGARET'S SCHOOL

16th year. College preparatory. Secretarial and Domestic Science Courses. Gymnasium, swimming, athletics. Catalogue from the School of the Sacred Heart.  
**MISS EMILY GARDNER MUNRO, A.M., Principal, Watkins, Conn.**

## Russell Sage College

Founded by Miss Russell Sage in 1862.  
A School of Practical Arts  
Located in the heart of New York City, near the city hall. Courses in Art, Music, Expression, and more. For catalog, address **Russell Sage College, New York, N.Y.**

## Schools and Colleges for Girls

## Schools and Colleges for Boys

## St. John's Military Academy

EPISCOPAL THE AMERICAN RUGBY

Look carefully at the above picture. Note all the details. Compare it with others. Ask your military friends to criticize it. It is a snap-shot of one of the six great competitors at St. John's. It is a group of boys who have placed themselves in harmony with the St. John's system and who are rearing their heads in erect, sturdy bodies, and alert, wide-awake minds. It is visual evidence of that thoroughness which marks St. John's training in all departments. St. John's training is man training; it is comprehensive and along with mind and body, it develops character. Summer Tutoring School. Send for catalog. Address

ST. JOHN'S MILITARY ACADEMY  
Box 18F, Delafield, Waukesha Co., Wis.

## Schools and Colleges for Boys

# Does your soap keep its promise to your complexion?

Can soap contribute to the beauty of your complexion?

Yes, indeed it can!

But not by any magic powers it may claim to have. Soap contributes to your beauty by *cleansing your skin*, because cleanliness is a prerequisite of *all* beauty.

Our experience tells us that the minute a soap promises to do more for your complexion than cleanse, it steps out of its province. *It can no longer keep its promise.*

We have made soap for many generations. We are naturally familiar with the ingredients that go into soaps of all kinds, and there is no mystery about them.

*We could, of course, therefore, make any kind of soap we pleased*

*—colored soap, medicated soap, highly-perfumed and expensively wrapped soap. Instead, we make Ivory Soap—a white, pure, wholesome soap that promises to do for your complexion all that any soap can do, and to do it safely, gently, delightfully, and economically.*

## And Ivory Soap keeps that promise!

Dr. William Allen Pusey, perhaps the most widely known American dermatologist, says that the *only* care needed to keep a normal skin clean and to protect it is to *wash* it. He advocates the use of pure mild soap at least once a day.

When you use Ivory Soap, you are sure of having for your toilet uses as pure and mild a soap as you can

buy at any price. You will have a soap that completely removes the film of oil and dust or powder which necessarily accumulates on your skin. Ivory's fine, pure ingredients assure you that this soil-film will be removed gently and safely. No manipulation or prolonged rubbing is necessary.

You know how generally physicians recommend Ivory Soap for babies. Hospitals use great quantities of Ivory. There can be no finer, safer soap for your skin.

PROCTER & GAMBLE

We can't quite make out the words of Mrs. Jollyco's lullaby song, but maybe, if we try very hard, we can write some words of our own to fit the tune. And if you're not quite sure of the tune, you try very hard and make up a tune to fit the words.

*Ivory (fragrant) Ivory white,  
Dresses baby, deep midnight;  
Ivory pure and Ivory mild,  
Baby makes a happy child.  
Ivory—lather, rinse and then  
Baby's skin is like a rose.  
Babies love Ivory best,  
Babies grow up clean and strong,  
Ivory guards you all day long.*

**IVORY SOAP**  
99 44/100% PURE IT FLOATS

\* \* \* \* \* (The Law approaches stealthily)  
"He!" (The Law speaks)  
"He!" (The Law speaks again)  
"Yes, we won't swim!" (The Law speaks)  
"We're bathing!" (The Law speaks)  
"Well, don't get wet!" (The Law speaks)  
"We're not!" (The Law speaks)  
"Then, don't!" (The Law speaks)  
"We're not!" (The Law speaks)  
"Then, don't!" (The Law speaks)

"Julia, do Mrs. Jollyco's blankets get all matted and harsh after they're washed, the way mine do?" asks Mrs. Fotherol of Vanity Square.

"Oh, no, ma'am," replies Julia, the perfect maid, who has been delivering a present of some particularly fine kamquar marmalade. "Our blankets are always—why they're just as soft and fluffy—you'd hardly believe."

"What do you wash them with?"

"Why, we take and put them in lukewarm water and make a thick suds of Ivory Soap, and squeeze and"

But, of course, you know how beautifully Ivory washes blankets and woollens.

# The Seven Greatest Americans

*By James Harvey Robinson*

Author of "The Mind in the Making," etc.

**W**HEN the Editor of THE AMERICAN MAGAZINE asked me to write an article on the seven greatest Americans, and tell why I considered them such, and what, as individuals, we might learn from them, the task seemed to me at first thought very hazardous, if not quite impossible. I was indisposed to undertake it. But on further reflection the possibilities of the subject emerged, and I began to wonder how much truth there was in the words of the poet, which I learned in the Fourth Reader:

Lives of great men all remind us  
We can make our lives sublime,  
And, departing, leave behind us  
Footprints on the sands of time.

There must be something brave and exceptional in what a man does or says to make him great; but in order to leave footprints on the sands of time he must be appreciated by great numbers of his fellow men and have the good fortune to have his sayings or doings recognized as sublime, and reported to future generations. To the historical student like myself it is all too clear that fame and striking merit do not necessarily accompany one another. Fame, as the poet Petrarch remarked, is, after all, but a breath, and, what is worse, the breath of the multitude; it does not ordinarily extend far either in time or space. The most widely known people to-day are indubitably those who will be forgotten twenty years hence—Mary Pickford, Babe Ruth, Billy Sunday. So fame is usually very fleeting and does not necessarily mean that the person who acquires it for the moment would really be considered great in any deep sense of the term. Fame is, then, something of an accident and commonly very evanescent. And yet without it, no matter how distinguished a man's achievements, he cannot be regarded as "great," because he will be forgotten, and leave no footprints behind him.

Then it must be remembered that one may rise above his fellows in so many different ways. Even the greatest is much like the rest of us in most respects. One might be ranked as a great philosopher

and be quite negligible as a captain of industry; he might shine among novelists and be a poor "boob" in the realm of biology. So it is evident that any discussion of greatness involves several rather distinct questions: In what ways did the candidate distinguish himself? How is he appraised by those best able to form a judgment of his achievements? How well known is he? How enduring a reputation is likely to fall to his lot? In this game that we are to play together we have to keep all these things in mind, and that is what makes the game so hard.

Statesmen—"dead politicians," as Senator Thomas Reed of Maine used to call them—and generals have the greatest show of becoming famous, owing to the habits of textbook writers, who call their names to our attention when we are young. But it is hard to pass judgment on their exceptional capacity and the real distinction of their sayings and doings. Most of us just accept the statement that a man is great, if we hear him called great often enough.

**IT WOULD** be natural, if we followed the usual routine, to include Franklin and Washington in our list of seven, for they both have a great reputation, not only in our own country but abroad. But I wonder if they did not owe their fame largely to circumstance rather than to any exhibition on their part of highly exceptional ability or genius. Franklin made a great scientific discovery when he drew the electric current down his kite string—but many a relatively unknown scientist has made equally great discoveries. His homely advice and prudent maxims exhibit nothing more than good common sense. Washington possessed wonderful poise, patience, and insight, but he left the Presidency with something of the disrepute that covered Woodrow Wilson's retirement. And I venture to guess that school histories a generation hence will assign to Wilson, as to Washington, a place among the very greatest of our Presidents. For around him will center our participation in the terrible World War and all those hopes of a federation of nations which may some day be realized in one

form or another. The brief passages devoted to him will make no reference to the mistakes and failures which weigh so heavily with his bitter critics to-day. So I am inclined to pass by both Franklin and Washington; but all of us would be quite properly grieved if Lincoln were not included in the briefest list of Great Americans. His footprints on the sands of time are preëminently those that "a forlorn and shipwrecked brother, seeing, shall take heart again." Lincoln's character, bravery, achievements, and fame all will bear the most careful scrutiny, and they belong to the sublimest that any man can enjoy. So we can safely select him as the *First* of the list.

**FOR** incredible vitality, marvelously varied capacities and achievements, and an insatiable thirst for knowledge and experience, of all dead politicians, T. R. must be awarded the palm. He lived six or eight lives in the span of one. No man ever illustrated better what a multitude of different things one can find time for if one will. So I put Theodore Roosevelt *Second* in the catalogue.

As for generals, I am in no position to bring them into our game. War is a sorry business which must have its managers; and these get a credit which I rather begrudge them, since the real heroism too commonly finds its end in the shallow grave of an unknown soldier. We are coming to see this, thank God, and the touching ceremonies which took place after the war in London, Paris, and Washington were really implicit rebukes to the old habit of exalting the organizers of successful carnage.

The great preoccupation of most of us to-day is business, and for a time, not many years ago, much was said of the "captains of industry," who, rather than presidents and generals, were held up as models of emulation. And I suppose that a great part of the readers of this magazine would have them in mind when they summoned themselves to be "up and doing, with a heart for any fate." Things being as they are, it is business success for which most of us "learn to labor and to wait." So a business man must be selected

HARRY A. STOLLER, N. Y. C.

**D**OCTOR ROBINSON is one of the leaders of modern American thought, particularly in the realms of history, psychology, and practical philosophy. His latest book, "The Mind in the Making," became a best seller shortly after its publication and it has been among the most widely discussed of all recent non-fiction works. As a professor of history for thirty years, Doctor Robinson has been the leading advocate in this country of the policy of giving a rational and sensible interpretation to historical facts. Both as a lecturer and a writer he has declared repeatedly that most of us do not dare to tell our children in the schools the things most important for them to know.

As a step toward remedying this situation, Doctor Robinson has been doing for more than twenty years an educational work of vital importance and far-reaching effect. This work has been the editing of a new kind of historical textbook, that has found its way into thousands of high schools and colleges. There are twenty-seven volumes in this series, which he prepared with the collaboration of Charles A. Beard, the well-known author and educator; James Breasted, the distinguished Oriental scholar; Edward Cheney, and David Muzzey. The aggregate annual sales of these volumes is about 350,000 copies.

Doctor Robinson was born in Bloomington, Illinois, fifty-nine years ago. After receiving his master's degree from Harvard and a Ph.D. degree from the famous German university at Freiberg, he became a lecturer on European history at the University of Pennsylvania in 1891. He left there to become assistant professor of history at Columbia University, and from 1895 to 1919 he was head of the history department at that university. Also he served for a year as acting dean of Barnard College. At the present time Doctor Robinson is devoting himself entirely to writing, which he considers the best medium for awakening people to the necessity of revising the whole system of education, particularly so that we may get a greater profit from the lessons of history.

for our list to represent that great field of endeavor.

The object of business is commonly assumed to be getting rich; and so we naturally think of wealth as the measure of success in this form of human striving. The formation and management of great industrial and commercial enterprises—railroads, mines, oil companies, steel mills, steamship lines, department stores, and the rest—and the direction of our all-essential modern system of credit through banks and otherwise are of fundamental importance. And business, especially on a large

scale, evokes great skill and insight and even genius. But our present "profit system" is associated with oppression, waste, unfairness and political corruption which no one can question. Consequently, the chief actors, however honest and high-minded they may be personally, cannot wholly escape the suspicions under which the whole system lies.

The distinction of accumulating during one lifetime a vast fortune running into the hundreds of millions is rather peculiar to our day, although not wholly new nor by any means confined to the United

States. Accordingly it is natural, in considering candidates in this class, to think of those still living or recently dead. Among those that have gained great wealth and prominence, at least in their generation, stand forth conspicuously Andrew Carnegie; James J. Hill, a constructive genius; J. Pierpont Morgan, not so fabulously rich but peculiarly identified with the enriching process; John D. Rockefeller, and Henry Ford. The names of Vanderbilt and Astor stand for families rather than individuals. How much individual creative thought, constructive imagination, and real regard for the public good has entered into the success of each of these men is impossible to say. None of them is likely to secure enduring fame, since they will hardly be recalled to school children a hundred years hence. If one must select among these candidates the best known, most persistent, ingenious, and overwhelmingly successful handler of our modern facilities for inordinate pecuniary gain I am inclined to think that the choice would lie between Rockefeller and Ford. The business men with whom I have talked seem to be much divided on this question. Ford is reputed to be richer than Rockefeller now, and he is not yet sixty years old, whereas Rockefeller is over eighty-three. So there are possibilities ahead for the younger man with which it is impossible to reckon. The Ford cars and tractors and the extraordinary methods used in cheapening their production have greatly influenced the daily lives of millions of people. Then Ford's courage and success in bucking other powerful financial and industrial combinations are exhilarating to the onlooker, as are his bold experiments in paying high wages. But the sorry fiasco of the "Peace Ship" and, especially, his anti-Semitic mania, reflect on Ford's knowledge and judgment when he wanders beyond his own bailiwick. Rockefeller, on the other hand, in spite of all the bitter criticism his business methods have aroused, has devoted half a billion dollars to the promotion of science and learning according to the accepted standards of his age. So on the whole I believe that he should be adjudged the more considerable man and placed *Third* on our list as the representative of modern business.

**I**N THE last few decades a new type of great man has arisen, the inventor. He is perhaps, in these days of radio, nearer to the heart of the young male than even the captain of industry. Of our inventors Edison is undoubtedly the most famous. A long list of his achievements might be given, among which are the talking machine and the incandescent lamp, which are to be found throughout the world as reminders of his patient experimentation and startling insight. His exhortations to sleep less, work more, and avoid the deadly cigarette are familiar to us all. Among men of science he is not ranked very high, for he is regarded by them not as a scientific discoverer but as one who takes the discoveries of others and ingeniously thinks out their possible applications to human convenience or amusement. I do not sympathize with this rather supercilious disposition of the matter. I do not see that it required more genius for Faraday to discover the principle of the electric dynamo and motor than for Edison to apply them in all sorts

of novel fashions. Whether or not other engineers and experimenters, like Steinmetz for example, may be ranked by experts higher than Edison in their penetration and insight he certainly stands alone in the hearts of his countrymen. So he takes his place as the *Fourth* in the list.

The various classes of great men so far mentioned owe much of their achievement to the coöperation of others. If we knew the whole history of famous statesmen, business men, and even inventors, we should realize that all sorts of humble fellow workers had made vital contributions to a fame in which they had no part. It is impossible to determine what secretaries, business associates, salaried engineers, and foremen have done in building up the reputation of their chiefs. The politician, military commander, business man, and even the successful inventor have to play the game with others, to whose support, suggestions, and warnings they necessarily owe much. There are, however, other kinds of distinguished achievement in which one plays a lone hand or at least carries on his work in solitude.

Of these classes the best known are the men of letters. We all read, and many of

us depend for a great part of our knowledge, insight, and enjoyment on those who write books. And all sorts of books are written—stories, travels, plays, poems, histories, scientific treatises, philosophies—which deal with the real or imaginary thoughts and deeds of men, or with the nature of the world in which we live. These may reveal deep and exceptional thought, varied imagination, or charming skill in presentation. During the past hundred or so years the novel has become our chief vehicle for profound observations and insight into human conduct and perplexities. I regard our great novelists as our most effective teachers. The novelist, poet, and dramatist reveal many things that escape the philosopher, and they can bring their truths close to our hearts.

NOTHING could be more difficult than to select a preëminent man of letters from the standpoints of intrinsic merit and his chance of enduring fame. To judge from the eagerness with which their books are sold, one would have to assume to-day that Harold Bell Wright, Gene Stratton Porter, or Robert Chambers were great so far as fame is concerned. And yet their

most constant readers would scarcely be inclined to rank them as such. I have never read any of their books, but I do turn eagerly to Sinclair Lewis, Harvey O'Higgins, Hergesheimer, Floyd Dell, and, with peculiar partiality, to James Cabell; and yet, like the readers of Mr. Chambers and Mrs. Porter, I should hardly be tempted to call any of them truly and permanently great.

Of course textbook fame is secured to those New England worthies, Emerson, Longfellow, and Lowell, and they all said many brave, true, and important things in their day. They have charmed and inspired countless readers and still have some hold on our attention. Then there is Poe and especially Walt Whitman, who are much more original than the New England group and whose reputation extends far beyond their own country. But, judged by the honesty, variety, and appealing skill of his work, as well as by his international reputation, I am inclined to rank Mark Twain as the greatest of our men of letters. "Roughing It," "Tom Sawyer," "A Yankee at the Court of King Arthur," "Pudd'nhead Wilson" and "Innocents Abroad" have delighted so many hearts both in his own (Continued on page 136)

## Sid Says:

### *Don't try to change the gait of a pendulum*

TWO men recently lost their lives in this manner: One of them became angry at the other, and, removing a pendulum from a big clock, used it as a weapon with which he beat the life out of his companion. The murderer took poison and so the two passed on.

A philosopher commenting on the tragedy said: "What a shame to make violent use of that pendulum! Give it time, and it would have killed both men peacefully and decently."

Anger, passion, temptation, wild impulse—all disappear if the human being can but restrain himself long enough for the brainstorm to pass. I suppose that practically all the jails in the world would be empty if man could get over the desire to hurry things faster than nature is willing to unfold them. Crimes of violence are always committed in a rush—in a mad scramble to solve a problem before nature's processes have had a chance to do their work. Thefts of all kinds are but man's foolish attempts to get something quick for nothing. Always a far greater reward would await the thief if he had but the patience to use his wits honestly and bide his time.

The happiest man in the world is the man who had sense enough a year ago last May to hold his temper and avoid killing Jasper K. Whiffenpoof. For now he sees that Whiffenpoof wasn't worth bothering with. And he also sees that if he *had* killed Whiffenpoof—he himself at the present time would be consulting his spiritual adviser for the last time and getting ready to seat him-

self in an electric chair. (With all the law's delays it usually takes about a year to go from shooting somebody to the last sacrament in the prisoner's cell.)

Of course some people want to be too deliberate about everything. And that's bad. It's all right to put off murdering folks. And stealing. And lying. You can't take too much time to think over one of those expeditions before setting out on it. But, as I say, some folks shy at ambition, work, and opportunity. They have no more impulse to achieve anything than they have to kill somebody! They like to sit in a rocking chair and watch the pendulum swing. For such folks it is a misfortune that the pendulum can't tap them gently behind the ears and stir them to action.

To watch a pendulum intelligently requires discrimination. You can learn from it the folly of trying to hurry it. But don't let it kid you! Don't fall a victim to its music and allow it to lull you to sleep. Let it be a prompter both to restraint and to action. A pendulum that could speak would say:

"I warn you that all things worth while take time. You can't correct wrongs in a minute. You can't acquire either property or reputation or real development in a minute. But you must occupy every minute, just the same. Time itself is nothing. It's what you do with your time. Don't try to do too much in a minute. And don't do too little. If you try to do too much you may land in jail. If you do too little you may land in the poor-house."

# A Business Genius Who Has Done What Others Said Was Impossible

William M. Wood organized the American Woolen Company when everybody else said it couldn't be done—The story of this great business genius, who began as an office boy when he was eleven years old—His wise comments on work, on business, and on human nature

*By Keene Sumner*

**Y**OU have heard of the island called Martha's Vineyard, off the southeastern coast of Massachusetts. I don't know how it came by that name; but I know that it is a "vineyard" which has produced some exceptional human beings. One of them is William M. Wood.

The first long talk I had with Mr. Wood was at his present home in Shawsheen Village, in Andover, Massachusetts. Afterward, as I rode back to Boston on the train, four pictures of him, as I had just seen him, kept coming into my mind. I believe they came because they were peculiarly vivid glimpses of his personality.

He is a great business man, one of the greatest in the country. Over twenty years ago he founded the American Woolen Company. Other men said it couldn't be done. When it was done, they said it couldn't last. Each year, for several years, they got all ready for the funeral.

But the funeral didn't come off! Instead, the infant grew and waxed strong. To-day, with William M. Wood still at its head, the company operates fifty-nine mills, with an army of employees about thirty-five thousand in number.

They, with the families dependent on them, and with the thousands of other people whose livelihood comes from feeding and clothing and serving this multitude, make a still greater army, hundreds of thousands strong.

At the center of this vast network of human lives is one man—William M. Wood. It is a position of almost terrifying responsibility. Someone told me that a visitor to Andover once asked a taxi driver what he thought of Wood.

"Well," said the driver, "I understand that he made five hundred thousand dollars out of his business last year. That's too much for any one man to make."

That taxi driver was more or less responsible for one machine and, at most, three or four passengers at any one time. If somebody suddenly had made him responsible for hundreds of thousands of

people and for millions of dollars' worth of machines, I wonder how much he would have thought the job was worth. He probably wouldn't have wanted it at any price. It takes a strong man to stand up to that test.

And William M. Wood is a strong man! Both his friends and his enemies agree on that point. But the four pictures of him which have lingered in my memory showed something in addition to strength. Here

the window toward a town which he has built and made beautiful, and saying quietly, "I was the most execrated man in America." From the Atlantic to the Pacific, I was held up to the public as an object of hatred."

And the last picture, the most vivid, perhaps, of them all: A flash of pride in the eyes, an almost imperceptible change of tone, as the man before me said, "My son told me;" or, "My son thought it best;" or, "My son had the idea."

Out of those four pictures I get something that seems to me a real, living personality. Humor and wisdom from the first. The clue to his business genius from the second. From the third, his uncompromising willingness to face facts. And, from the last, his capacity for deep human feeling.

I was talking once with a man who has been with the American Woolen Company for twenty years. He had a curious way of referring to Wood as "that man," as if Wood were a phenomenon of nature. For that matter, he is—a phenomenon of human nature. Among other things, this friend said:

"That man is an autocrat. He is always the boss. But he is a boss who has the faculty of inspiring loyalty in those of us who

work under him. If one of us has something coming to him, whether it's a call up or a calling down, he gets it! If it's a calling down, it is a good one. But the man knows it *was* coming to him. Men like to work for a boss that knows his business. The man who can't inspire loyalty is the one who tries to lead when he hasn't any goal! We are glad to follow Wood because we know that *he* knows where he is going."

Mr. Wood was born in Edgartown, Martha's Vineyard, June 18th, 1858. When he was two years old the family moved to New Bedford, and there he went to school until he was eleven years old. Later he entered the New Bedford High School, but did not graduate. He was the kind of boy, (Continued on page 203)

## The Water That Has Gone Over the Dam Won't Help You Now

**"I'M NOT** spending much time thinking about last year's report, anyway," says Mr. Wood. "I'm more interested in what *this* year's report is going to be. It isn't the water that's gone *over* the dam that will help you now. It's the water *behind* the dam! My job is not to watch the stream that has gone by, but to get ready for the freshet that may come!"

"A man learns from his experience. But what he learns he should learn quickly. He shouldn't have to keep turning back the leaves to find out what the lesson was."

they are. What do *you* see in them?

First, a picture of him looking up with a quizzical smile in his eyes and saying, "I was a lucky boy. I was not hampered by wealth, nor by a great name to be lived up to, nor by a line of ancestors who would have started me at the top, whether I was fitted to be there or not. I was *free*. I had nothing to live down and nothing that would live *me* down."

Second, a picture of him as he said thoughtfully, "An *inquiring mind* is one of the greatest possessions in the world." And he added, as if it were a challenge, "A man, who does no more than sweep the floor, can learn things *by* sweeping the floor, if he *wants* to learn."

The third picture is more vivid: an erect figure, gray-haired, looking out of

Photo by J. E. Purdy & Co., Boston

### *William M. Wood*

**MR. WOOD** was born on the island of Martha's Vineyard, off the Massachusetts coast, sixty-five years ago. When he was only eleven years old, his father died and the boy went to work in the office of the Wamsutta cotton mills in New Bedford. Even as a lad, he was a walking interrogation mark, everlastingly asking questions about the methods and the costs of manufacture.

When he was about thirty years old, he left the cotton industry and became treasurer of the Washington mills, which manufactured woolen goods at Lawrence,

Massachusetts. Ten years later he organized the American Woolen Company, which has been the greatest single factor in stabilizing an industry that was almost hopelessly demoralized.

He is still the head of the American Woolen Company, now operating 59 mills with an average of about 35,000 employees. A few months ago he became General Director of the Consolidated Textile organization, which makes him also an outstanding figure in his old field, the cotton industry, and one of the most powerful business executives in America.

### *Eva Le Gallienne*

**LESS** than two years ago, when she was only twenty-one, Eva Le Gallienne scored a New York success as Julie in "Liliom." During the past year she has repeated this success all over the country, thus becoming one of the youngest stars on the American stage.

She is the daughter of the well-known writer, Richard Le Gallienne. Born in London and educated in Paris, she came to this country when she was sixteen

and has lived here ever since. She played a small part in a London theatre before coming to America; and for four years after reaching New York she had only one chance to play a rôle of any importance. But she took every part that was offered her, studying all the time and gaining experience. The result was that when her opportunity finally came in "Liliom," her performance was one of the artistic triumphs of the season.

*Digitized by Google*

# Eva Le Gallienne

## The Story of a Stubborn Girl

In her first four years on the stage she was "out of a job" twelve times—She took any part she could get; because she had to have work in order to live—But she went doggedly ahead, learning all the time, until she won her fight

*By Mary B. Mullett*

**L**AST summer that extraordinary play, "Liliom," was repeating in Chicago the success it already had scored in New York, when suddenly the young actress who played the leading feminine rôle broke down completely.

Only twenty-two years old, she had the health and elasticity which are the splendid assets of youth. She had not been squandering these assets on things outside of her work. She had not been burning the candle at both ends, but had lived very quietly and simply.

Her breakdown was not a pretense for the purpose of getting a vacation. She had good reason *not* to want a vacation then. She had been on the stage only six years; but in that short time she had gone through some bitter struggles. As Julie, in "Liliom," she was playing her first really great rôle. It had brought her success; had compelled recognition from critics and public alike. Under those circumstances it was of vital importance to her to go on playing.

Yet, in spite of all this, the collapse came. The play closed and the company was temporarily disbanded.

The run of "Liliom" was resumed in the early autumn, with the young actress again playing the rôle of Julie. In the past two years, hundreds of thousands have seen her in that part and her name has become familiar to other hundreds of thousands.

But what about the girl herself—her character, her talent, her personality? What is the story that leads up to that night last summer, when she was carried, unconscious, from the stage to her dressing-room?

Those of you who have seen "Liliom" or who have read about it, know that the young actress I am talking of is Eva Le Gallienne. She is the daughter of Richard Le Gallienne, the famous writer, who transplanted himself from England to this country about twenty years ago. To understand why she collapsed, and to understand Eva Le Gallienne herself, we

must go back that far; even further.

She was born in London; but through inheritance she is a strange combination of diverse nationalities: English and French through her father's family; Danish and Russian through her mother's.

Perhaps this composite inheritance helps to explain her. I think she *understands too much*. Too much, I mean, to allow her to take life casually; too much to permit of her having a single-track mind. That sort of mind is a very comfortable thing to possess, and practically efficient too. But it isn't often associated with breakdowns.

Although she hasn't a single-track mind, Eva Le Gallienne does have a single-track purpose. That purpose is bound up in her

She was born in London, as I said before; but when she was a child she was taken to Paris by her mother and was a day pupil in a French school until she was fourteen. She speaks English, French, German, and Danish. Not long ago, she became—as she put it—so angry with herself because she could read Russian literature only in translation that she began to study Russian.

A good many people "begin to study" something or other, but it generally is a short-lived impulse. Women are particularly prone to "take up" this or that subject; bridge, or domestic science, or medieval art. Usually, for some unknown reason, it is medieval art. But their "taking up" is generally promptly followed by a laying down, which leaves them about where they started.

I have known a good many young men too, who "took up" various things: clerks, who had a spurt of ambition and began a study of credits, or something they knew would open the door to promotion. But their study became more and more spasmodic. The last I knew of them they still were clerks. Apparently their sole interest in credits was in seeing that their own credit was good for a week's board or a new suit of clothes.

With this in mind I recently asked Miss Le Gallienne if she still was studying Russian. Yes—she was! She had not tired of it and "taken up" something else. She has that tenacity of purpose without which no real achievement is possible, and with which none is impossible.

After the eleven years which she spent in Paris, she went back to London with her mother. She says she was a disagreeable child; sulky and stubborn. But that statement lost some of its force when she added, with a little laugh, "I was even more disagreeable then than I am now!"

Of course she can call herself disagreeable if she wants to. No one else will. Stubborn, perhaps. Most people who have a well-defined purpose are more or less stubborn, (Continued on page 78)

### Are You a Flying Fish?

**"IT SEEMS to me,"** says Miss Le Gallienne, "that it is a fatal mistake to copy another person's methods, just because *he* has succeeded with them. People who merely imitate others remind me of flying fishes. Their flying doesn't amount to much, compared with that of the birds they imitate. I'd rather be a success as a fish than a failure as a fish trying to be a bird."

work. She is twenty-three years old now. But she is extraordinarily different from the average girl of her age; as a steady flame, fed from some inexhaustible source, is different from a sputtering fireworks pinwheel.

It is hard to believe that any young human creature who has this combination of broad understanding with concentration of purpose will not achieve that purpose, whatever it may chance to be. So, to those who know her, Eva Le Gallienne's success has seemed inevitable.

"You fool!" he screamed. "What does a yellow brat matter? We'll all lose our lives, if you don't look out!"

# Unmasked

A romantic story of the ingenious device of Lee Fu

By Lincoln Colcord

ILLUSTRATIONS BY W. H. D. KOERNER

ONE of my earliest recollections of Lee Fu Chang was his devotion to little Minnie Amesbury," Nichols began. "Everyone in the Hong Kong fleet knew about it; the inscrutable Chinaman fairly doted on the child. Minnie was Captain Carleton Amesbury's only daughter—Amesbury of the 'Southern Cross,' you know. Ship and man had practically spent their lives in the China trade; year after year Amesbury would bring her East with oil or what-not to Singapore or Shanghai or Amoy, and year after year Lee Fu would charter her home from Hong Kong. It was a standing joke with us; Amesbury himself, with his great booming laugh, used to say that Lee Fu chartered the ship for the sake of seeing Minnie once a year.

"The girl had been born in Mindoro Passage, on the outward run, and had been named for her birthplace. Lee Fu had seen her first, a few months later, as a little pink baby in Mrs. Amesbury's arms. She had smiled up at him, and reached out her tiny hands fearlessly to play with his queue.

"Hal! Lee Fu had exclaimed triumphantly, touched to the heart. 'She shall be my little Sailor Boy.' He was on terms of friendly intimacy with the Amesburys.

"Sailor Boy, indeed! Mrs. Amesbury had retorted. 'My precious little Minnie—the very ideal!'

"Lee Fu had given her his flat, quizzical look. 'Madam,' he had observed, 'someone should befriend a helpless infant, when parents who have named her Mindoro choose to call her Minnie.'

"As time went on his devotion deepened. From babyhood he had showered gifts upon her: wonderful Chinese dolls with bland white faces, dark polished hair, and richly embroidered gowns; robes and quilts of priceless texture and needlework; bracelets of wrought silver and lapis lazuli; a piece of smooth carved jade for her to cut her teeth on; a necklace of moonstones and sapphires before she could walk; and later, as she grew to girlhood, silks and embroideries by the armful for the gowns that would soon be needed. Mrs. Amesbury told me that they had a huge camphor-wood chest at home full of the stuff that Lee Fu had given the child.

"For the first twelve years of her life Minnie went to sea constantly with her parents; all the shipping world of the China Sea knew and loved her. She was that marvel of creation, an unspoilable child. From babyhood she seemed to have determined her own character. Whether by chance or occult foresight, Lee Fu's choice of a name for her fitted well. She grew to be a fascinat-

ing, free-spirited hoyden, familiar with a ship and all her ways, as much at home on the waste of waters as a sea bird—far more his Sailor Boy, indeed, than she was her mother's precious Minnie.

"Then intervened five years of school life for her at home. We all missed her in our various ways; but Lee Fu was frankly disconsolate. He would hardly go near the 'Southern Cross' when she was in Hong Kong; and Amesbury's booming laugh was now directed to a new variant of the stock joke, to the effect that if he didn't bring Minnie on another voyage pretty soon he'd lose a good friend and a profitable business.

"All this had its amusing side, of course, yet I knew that in an odd sort of way it was a real sadness to Lee Fu not to be seeing the child. He spoke of it shyly and confidentially, in a manner of poking quiet fun at himself.

"I feel as if empty in a place that used to be filled," he said.

"How does it happen," I asked, humoring his fancy, "that a philosopher falls in love with a child?"

"An idle question! It happens because life brings it, and that is the answer. Why analyze the cause, when the effect is all we know? Or, if you ask me, I will say that it is natural and inevitable for a philosopher to fall in love with a child. The rest in reality are too busy loving themselves. He is the only one who can."

"IT WAS Mrs. Amesbury's death, I believe, that put an end to the girl's school days and brought her back to Eastern waters. She had been longing for the sea, and now, with her father alone on board the ship, nothing could keep her ashore. I heard the news from Lee Fu just before sailing. When next I reached Hong Kong, six months later, the 'Southern Cross' had come and gone. Lee Fu was radiant, if such a term could be applied to one whose facial expression rarely ranged beyond a lifting of the eyebrows, and all I heard about for many days was the beauty, charm, and surpassing excellence of Minnie Amesbury. She was, I learned, the same Sailor Boy as of yore, the same enchanting creature, the same energetic playmate, the same boss of all she surveyed; the same, that is, with this great difference, that now she was 'very, very beautiful'—a phrase spoken mysteriously, as if intended to convey a hidden suggestion, a hint of unprecedented rarity. But I would have to see her, I was told, to understand wholly....

"Hold on a minute, Lee Fu," I objected here. 'It isn't possible for a girl of mere flesh and blood—'

"This is her photograph," he answered with supreme confidence, turning toward

me a frame of ivory and green bronze that stood on his desk.

"I gazed at the picture with interest. A striking face, indeed, dark, brilliant, vivacious, with the same audacious, challenging expression that I remembered. Yet now she'd become a woman, it gave me quite a shock to realize how time had flown.

"What do the young chaps think about it?" I asked shrewdly. 'You say she was a sensation wherever she went, at the Yacht Club, at Happy Valley.... But young chaps aren't studying girls for philosophical purposes, you know.'

"I know," replied Lee Fu thoughtfully. 'Yet she is innocence itself, and free as the air of the trade winds. She sailed away with heart untouched, having herself touched all available hearts that came her way. That is the whole story. What men think about it—they are not all young men, either—is of course the same tiresome formula, that they love her, that they long to possess her, that they would die for her, but that, not being called upon to die for her, they will continue to live for her.' He waved a hand. 'You recall her as a child? Well, she is still unspoiled.'

"The old 'Omega' and I resumed our endless round, and for two successive voyages the 'Southern Cross' visited Hong Kong while we were in the Archipelago. I seemed fated never to meet this fabulous Minnie Amesbury, although I continued to hear of her. Yes, indeed. Half the eligible bachelor colony of the port had already proposed marriage to her—fine young English boys in the mercantile houses ashore, the pink and white variety mostly, running from six feet up, with now and then a smaller, darker-skinned Continental, and more rarely still a lean and energetic American from New York or the West Coast, out with the Standard Oil or the Pacific Mail. One by one, I heard, they had marched up to certain defeat, leaving their devastating enchantress still immune.

"BUT at length my luck turned, and I was vouchsafed that personal glimpse which, I'd been promised, would bring me full understanding. It did. I'd arrived at noon that day, had spent a busy time at the Custom House, and was totally unprepared to find a beautiful girl ensconced in Lee Fu's office when I rushed in at four o'clock.

"She sprang up with an impulsive yet quiet motion, crossed the room as I stood blinking in the door, and took both my hands.

"Captain Nichols!" she exclaimed in a low, gripping voice. 'How well I remember you.'

"I looked at her narrowly, yet with

From where she steered, Minnie could see Cavendish plainly through the rear of the

considerable trepidation. Somehow, the interminable advance tale had frightened me; I'd half expected to see her suddenly dance a jig or perform like a trained seal. Her calmness and simplicity took me flat aback.

"It's Minnie Amesbury, isn't it?" I said. "I remember you, too; but I can't say that I would have recognized you."

"We sat down to talk, while Lee Fu poured tea. . . . How shall I put in words the singular attraction which this slender,

glowing girl exercised over all who came near her? I felt it myself now, yet found time to wonder, because she was so utterly different from anything I'd anticipated. For instance, her surcharged quietness. Of course she was beautiful to look at, with a face reflecting inner light. But the secret of her power was a native, insidious sincerity—that, and the fact that she was a product of seafaring, a sailor through and through. Yes, she was one of us, using our language, speaking with knowledge of the elements, with

judgment and sympathy, with an experience of voyages, speaking—I have it now!—with love of the sea.

"Well, that would do for sailors; but what of all the landlubbers she had in tow? They'd hardly be captivated by a refinement of nautical psychology. Yet, in a sense, I see how it was. Seamanship, in its broader application, is nothing but the ability to live. Thus, being a true seaman, she had a way of meeting them, too, on a ground of common experience. She had loved well something

cuddy. Now and then she glanced at him in perplexity. What could she make of it?

which was part of life. Not what she knew, so much as the fact of having loved, gave her those level eyes and that frank understanding.

"Just as I had completely fallen under her spell that afternoon, there came an interruption to our rambling chat. The door of the outer office opened, and Sing Toy announced a name familiar to me.

"Have got Mister Cavendish," he said.

"A quick change went over Minnie Amesbury's face; it lighted with a look beyond denial. 'Oh, he has called to

take me off in his launch,' she said hurriedly. 'I told him I would be here. Good-by, Lee Fu, till to-morrow at tiffin. Good-by, Captain Nichols. You must call on Father; he's down with one of his bad attacks of dengue fever.'

"She was gone almost in a flurry, while I stood gazing after her in mild amazement. 'Not Cavendish?' I asked, turning to Lee Fu.

"He sat down behind the broad desk, spreading his hands flat on the polished wood. 'The same,' he answered. 'As you

already have surmised, her splendid isolation is shattered. Following its despicable custom, life has surprised her.'

"But why Cavendish?' I asked in-  
anely.

"Why not Cavendish?' Lee Fu demanded. 'What have you against the man?'

"I dropped into a chair mechanically. True enough, why not Cavendish? He was a dashing, handsome fellow, clean-cut and strong-limbed, a sportsman, a man among men, (Continued on page 152)

# There Are "Big-Town Birds"

By a "Small"

**Y**ESTERDAY, being the first day of the month, I deposited my monthly salary check in the Citizens National Bank, of which I am the cashier. The amount was three hundred dollars. My last months when I worked in New York, I received just one hundred dollars more than this. From the financial standpoint, therefore, you can see that I had had a setback. From every other standpoint it is a story of victory and, if my observation of young men in New York and in smaller cities is any criterion, it ought to have a wide and interested reading.

There are thousands of men in big cities who don't belong there any more than I did; and there are other thousands in smaller places who are restless and discontented because they imagine that the only real chance for achievement is in New York or Chicago. I have something to say to both these big audiences.

Recently, I read that, while the population of New York City, as a whole, is increasing, the population of Manhattan Island is actually smaller than it was a few years ago. My wife and baby and I are three of the reasons why that is so. Some other family is occupying our sunless, airless, little kitchenette apartment on West 208th Street—and we wish them joy. For just one third the rent that we paid in New York we now have a small house of our own, a garden, and a place for a garage. Maybe this is Failure; maybe New York licked us and threw us out, and we ought to hang our heads in shame. But we do not think of it in that way. We have come to think that God makes some of us to be small-town birds; and we thank our lucky stars that we found it out in time.

The last census credited our little city with eleven thousand people; so we always speak of it as having a population of "somewhere between twelve and fifteen thousand." I am not going to give its name, but I need not be afraid of describing it so minutely that any reader will identify it, for it is precisely like a score of other Middle-West towns. It has its Main Street, with a couple of blocks of smart-looking little stores, and its new hotel; its country club and its one broad avenue—let's call it Pleasant Avenue—where good-looking houses stand in the midst of well-kept lawns, sheltered by spreading elms.

My father, a physician, could never afford a home on Pleasant Avenue. At sixty-five, he still is active. In years when the city is prosperous and people pay their doctor bills, he takes in as much as four or five thousand dollars; in bad years, when his work is just as heavy, his kind heart and easy-going business habits reduce his income to less than half these figures.

Twenty-four years of service have built up a store of good will and public confidence for my father that is not easily assailed. He belongs to every organization in town, contributes impartially to all churches, benefits, and festivals. His

sense of honor and big heart make him one of the best-loved men I have ever known. He was born on a farm and worked his way through college and medical school by tutoring and clerking in a drug store. It was quite a victory for him to build up a solid place in the medical profession. I quoted his own experience to him as an argument when talking with him about my going to New York.

"You weren't satisfied to stay on the farm," I said. "You picked out a strange field and conquered it. New York is bigger than this town, just as this town was bigger than the community where you spent your boyhood. The same ambition that brought you here makes me want to go there."

"I'd hardly call it ambition that brought me here," he answered, pulling hard at his old brier pipe. "It was chance, more or less. I didn't have car fare enough to leave the state after settling up my bills at the university, so I asked one of the professors if he knew a town where most of the doctors were getting pretty old, and he gave me the name of this town. I had just enough to get here and five dollars over."

"But you wouldn't have gone back to the farm," I persisted.

"No, probably not," he answered slowly. "Life in a town like this has some advantages over life on a farm. There are conveniences and social relationships that are attractive. But these advantages don't go on increasing in proportion to the increase in population."

**B**UT surely New York has advantages over this little place," I argued.

"For instance?"

"Why, the theatres, good music, the art galleries and museums," I said; "even you will admit that these are attractions."

"Perhaps," he answered with a smile; and it was not until many months afterward that I understood the thought that lay behind that smile.

"I don't want to stand in the way of your going to New York, my boy," he went on, and there was a note in his voice that made my throat fill up. "There is big work to be done everywhere. If it's the work that draws you, go, and God bless you. Your mother and I will be lonesome; but we won't let that count. But don't go chasing any such fool idea as fame. There's no such thing. One man is remembered for a day and another for a hundred years; but they are equally forgotten in a thousand. There's nothing that counts like health, and the love of your wife and children, and the work, and the friendship of your friends. You don't have to go to a big place to get those advantages; your mother and I have had a one hundred per cent solution of them right here."

I am telling my story in a rather amateurish fashion. The conversation just related occurred a few days after Christmas, 1918. Until the outbreak of the war my life was exactly like the lives of a mil-

lion other sons of middle-class homes. I went through the public schools of our town and entered the state university. During my summer vacations I worked around the bank where I am now employed; I liked the work and drifted gradually into the notion that I would be a banker. Then came the war and, along with most of the other men in the senior class, I enlisted immediately.

I never got to France. The Personnel Department discovered that I had a certain facility with figures. I was given a special assignment which took me first to Washington and later to New York. There I remained, in spite of all the pressure I could bring to bear through our local congressman. The only fighting I witnessed was the wrangle between the would-be profiteers and the colonel at the head of our department.

**H**OWEVER, the war was a great university. I went into it a boy; I came out almost a man. We were juggling with millions in our department; we were dealing with big manufacturers and bankers. I sat in meetings with men whose names are known all over the country; mental I measured myself up against them, trying to discover the secrets of their success. I said to myself, "The big game is no different from the little game, except that the chips are larger. Most men are afraid to play with chips that represent thousands or hundreds of thousands, but I've got used to it through my war experience. Big figures have no more awe for me. I'm going to stay in the big game."

So it came about that I had the conversation with my father which I have just related. I left home immediately after Christmas in 1918, and went directly to the office of one of the New York bankers whom I had met during the war.

My banker friend had been very kind to me in our casual contacts, and on one or two occasions I had been able to do him little favors for him. I walked into his office with the vague notion that he would assign me to a little room next to his; one; there I would have the chance to see how he worked and to be in on his important deals. With such an opportunity it would be only a matter of a few years until I should be "made."

What actually happened was somewhat different. The banker remembered me and was cordial, in a hurried fashion. He said that he had been back on the job only a few weeks and felt a little out of touch with his own organization, but he would see what he could do for me.

At that he pressed a button and turned me over to an assistant vice president. He shook my hand, and bowed me out. The following Monday morning I went on to the pay roll of that bank, and I stayed there for three years. But I never again saw the president, except one night behind the speaker's table of a big company dinner. My work was in the up-town branch, which he seldom visited. Perhaps he may see this story and recall

# And "Small-Town Birds"

## Town Bird"

circumstances under which I joined his organization. If he does, and will have a little patience, he will discover how and why I left, and what I am doing now.

I once read a magazine article by a woman writer who wondered how decent young men and young women managed to meet each other in a big, impersonal city like New York. "In a small community," she said, "society exists very largely for the purpose of bringing right-minded young people together. They meet at homes, at the club, and the churches. But New York is full of the finest sort of young people, many of them college graduates, who are utterly detached. They have the normal human craving for love and for homes of their own. How do they find each other?"

I spent quite a lot of spare time puzzling over that problem in my first six months in New York. I was terribly lonesome. If any decent girl, with a fair proportion of intelligence and good looks, had agreed to eat dinner with me every Sunday evening, I would gladly have paid for the meal and added a generous fee for her time besides. I used to wonder what would happen if I were to run an advertisement like this in one of the big newspapers:

### Wanted: Dinner Companion

Young man, twenty-five, college graduate, stranger in New York, desires to meet good-looking college girl of about the same age. Object, a little human society and a friendly face across the table for one meal each week. References gladly given; all expenses paid, including flowers and taxi hire.

I UNDERSTAND the papers have a rule forbidding the acceptance of such personal advertisements. If it were not for that rule I am sure they could easily publish an extra section every Sunday, filled with invitations from well-intentioned, trustworthy, but awfully lonesome men.

At the end of my first six months I had managed to assemble the following list of feminine acquaintances:

Rose, the red-cheeked Irish waitress at the restaurant where I ate breakfast.

Lillian, a stenographer in our office, and Maude, her friend. Another man and I took them to dinner and a vaudeville show once or twice, but their slang, which was amusing at first, grew rather tiresome, and I dropped out of the picture.

Marion, a nurse at the hospital. I sprained my ankle playing tennis and was in her charge for a week. An interne who saw her oftener than I and was lonelier married her. She is a nice girl, and they are starting out for themselves in a little town up-state and are very happy.

Helen, a classmate of my sister at a boarding-school; now my wife.

Most men have some misgivings about the girls their sisters pick out for them, otherwise I might have known Helen some months earlier. My sister wrote more than once suggesting that I call, and I finally did, finding Helen in a tiny little apartment on Madison Avenue which she shared with two other college girls. Their apartment was so small that living in it was possible only by the aid of a very rigid schedule. The rule was that the girl who got to bed first must get up and take her bath first, whether she wanted to get up or not. On evenings when one of them entertained company, the others went to the movies and left the one big comfortable chair for the guest.

Helen and I were married in June, 1920. We took our two-weeks vacation at that time, spending the last week at

the beginning and decided to have the fun of picking up our other treasures gradually at auctions, of which there is no end in New York.

Besides the auctions we had the theatres. Every other Monday night we treated ourselves to a table d'hôte dinner, and afterward sat in two seats in the first balcony. One Sunday afternoon we went through the Metropolitan Museum; and one night we stood up in the back of the opera house and heard Caruso. It was a very happy first year, but I am afraid it was a pretty selfish one. We made no additions to our list of friends. Helen referred to this one evening when we were sitting in front of our gas-log fireplace.

"Do you know, Jim, it scares me to think what would happen to me if anything happened to you," she exclaimed.

"None of that foolish talk," I said. "I'm the healthiest future bank president in New York City. We're not saving anything just now, but presently I'll begin to make a fortune for you. Never worry about that again."

"I WASN'T thinking of money," she answered. "I managed to get along before you arrived and I suppose I could do it again. But I'm so absolutely dependent on you for companionship, Jim. Do you realize that in this whole city of six million people we haven't a half-dozen friends?"

"Oh, we'll find friends fast enough," I answered lightly.

"I suppose so," she said, "but I was just thinking how different things are in your friendly little home town."

Afterward the conversation came back to me a good many times. A city of six million people, and not half a dozen friends! I wonder

how many other couples there are in little apartments and apartment hotels who could say the same!

In the spring of 1921 Helen gave up her job and, on a hot, blistering day in July, our boy, Jim, Junior, was born. Young Jim brought about a pretty complete change in our schedule. We gave up the little apartment down-town and took a still littler one away up on 208th Street. With that perverse unwillingness of folks to face the truth frankly we told ourselves that "the air would be better up near the river." The real difference was fifty dollars' difference in the rent. Even then, the monthly rent bill made a big hole in our income, which was no longer aided by Helen's salary.

There was no more going out in the evenings, for we couldn't afford a maid. Life for Helen (Continued on page 160)

## Five Characteristics of New York Men Who Have Made Good in a Big Way

AT THE end of this article the author points out five distinguishing characteristics of men who have made good in a big way in New York City.

Compare them with your own characteristics. Do they make you glad that you live in New York or Chicago? Or do they make you glad that your home is in the country or a small town?

my home—a wonderful week! There were parties for us at the country club and luncheons in different homes. Helen enjoyed every minute. "How good the air tastes here, Jim!" she exclaimed. "It's nice to be where everybody is friendly. I almost hate to go back to New York."

But a lot of happy experiences were waiting for us in New York. We took our time about deciding on an apartment, poking all over town and making the adventure of searching last as long as we could. Finally we settled on a little place down near Washington Square—a big living-room, an alcove bedroom, and a nice tiled bathroom. The rate was terribly high, one hundred and seventy-five dollars a month, but we were both earning fair salaries and Helen loved the place the minute we stepped into it, which was reason enough. We bought only a few things at

# How Your Handwriting Betrays You

Interesting stories of people who thought they could disguise their writing, make changes in important documents, alter checks, or tamper in some way with written words; but they couldn't fool the expert examiners.

Even if they used a typewriter, they could be detected

*By Allan Harding*

**F**ILED away in steel cabinets, in a certain office in Chicago, are some of the most interesting records of crime that are anywhere to be found. The man who occupies that office is quiet and unassuming. But he is a terror to evildoers of a particular kind, although some of them don't know it—yet. His name is Jay Fordyce Wood and his professional title is "Examiner of Questioned Documents."

Working carefully and slowly, with the inexorable precision of an instrument of Fate, he has helped to defeat the best-laid plans of some of the most wily and daring criminals.

There are only six or seven men in this country who are doing the kind of work Mr. Wood is engaged in. These scientific investigators are entirely different from the old-fashioned "handwriting experts." The evidence they give is not a matter of their personal opinion; it is something which you and I, untrained though we are, can see with our own eyes.

Thanks to these men, it is becoming harder and harder for a person to be a successful crook. They can detect, with almost infallible certainty, forged signatures, spurious documents, or those which have been tampered with in any way. Handwriting or typewriting, it makes no difference to these experts. Link by link, they forge a chain of evidence that cannot be broken.

"The man who writes a spurious document, or who alters a genuine one," Mr. Wood said to me emphatically, "sets down with his own hand his confession of guilt. You may try to disguise your own handwriting; you may painstakingly copy that of someone else; you may erase words or figures and carefully substitute others; you may use 'eradicators' which apparently cause the ink to vanish, leaving only blank white paper on which you then can write whatever you wish. But it is all in vain! The evidence of your guilty work is there; and, by experts, can be made as

plainly visible as the nose on your face.

"Your handwriting habits cannot be changed any more than can the traditional leopard's spots. If I have enough specimens of your writing to compare with that which you have tried to disguise, I can prove that you wrote *all* of them.

"You may think you will be safe if you

had been made, and how it had been done. It isn't always as simple as that; but it is possible to demonstrate the truth concerning practically every document, either written or typewritten.

"Now of course the readers of *THE AMERICAN MAGAZINE* are not crooks! And let us hope that few of them will be the victims of crooks. But they are interested in themselves; and when I tell a person that he can't disguise his handwriting so that it will fool the expert examiner—provided the examiner has specimens of the person's undisguised handwriting—he is always astonished.

"The business man is amazed when we tell him that we can take a few typewritten lines—perhaps only a few words—and name the make of machine with which they were written; that we can often trace it to the *one* machine which was used, and can tell when the writing was done.

"We, who make this our profession, could do it with *your* handwriting and typewriting, or with anyone's. But of course the cases that come to us are those involving some sort of crookedness.

"However, just as an illustration, let us suppose that you really are crooked; that, for example, your Uncle John wrote his will some years ago, leaving most of his money to a dog hospital! You think he was very unfair to do this. You are sure that you, his nephew, need the money far more than any sick dog needs it. You make yourself believe you ought to have it.

"You have heard that certain chemicals will bleach ink and 'leave not a trace behind.' So you purloin Uncle John's will while the old gentleman is on his deathbed, and you eradicate the words, 'the Fido Dog Hospital.' Then, carefully

imitating Uncle John's old-fashioned handwriting, you fill the blank space with 'my nephew, George Jones.'

"You replace the will in Uncle John's desk; and a few days later when the old gentleman has passed on you receive con-

(Top) Portion of a check which was cashed by the man who received it. The bank punched it and returned the canceled check to the man who drew it. He claimed that the words "Pay In Full" had been there all the time. The man who cashed the check declared they were not there when he got the money. The two lower pictures prove he was right. The one at the left—an enlargement of the last "l" in "full" and of the "f" in "five"—prove that the word "full" was written *after* the check had been punched. For the ink ran around the edge of the punched hole! The picture at the right is of this same hole, taken from the back of the check. The ink had run *through* the hole. This minute detail proved absolutely that the words "Pay In Full" were added after the check was cashed

use a typewriter. All typewriting looks alike to you. But to the scientific examiner, with his specimens from every kind of machine ever made, you are literally an easy mark. I have examined papers where a single glance told me just what changes

(Left) Portion of a stock certificate stub claimed to have been issued to E. V. Bain. It was "fumed" by Mr. Wood, as he explains in the accompanying article. The result is shown at the right. The fuming brought out the name "Morgan O. Littlejohn." The certificate had been made out originally to Littlejohn. His name was later effaced by means of an ink eradicator and Bain's name written there instead. But only the color of ink is destroyed by an eradicator. The substance remains and the fuming process reproduces the effaced writing. This is one way in which the person who tampers with written papers can be caught

gratulations on the money he has left you. Fine! . . . But it happens that Uncle John had told the dog hospital folks that he was leaving his money to *them*. They contest the will. It goes to an expert examiner to be studied. And when that happens, your goose is cooked.

"Ink eradicators do not *destroy* the ink; they merely bleach it. The *substance* of the ink remains; only the color has vanished. In the space which you made to appear blank, you wrote what you wanted. But the original writing is still there! And the expert can bring it out.

"One way of doing this is by what we call 'fuming.' We would expose the questioned part of Uncle John's will to the fumes of certain chemicals. In this way, we could make the original words, 'to the Fido Dog Hospital,' plainly visible. They would soon fade out again; but another fuming will cause them to reappear. This can be done right before the judge and the jury, if they don't object to having the court-room 'smelled up' with the fumes.

"While I am on the subject of ink, let us suppose that you tried another kind of trick: You deliberately spilled some ink on the will, taking pains to have it flow over the words you wanted to alter. You then wrote the new words in the space above, or below, or at one side of the blot. Your idea is to conceal the original writing and to give the impression that Uncle John accidentally spilled the ink and then wrote the missing words in where there was room for them.

"After experimenting with other writing, you find that the ink you are going to spill must be *dark red*, in order to blot out the reference to the dog hospital. So you use this color. The result satisfies you. Not a trace of the detested words can be seen.

"Unfortunately for you, however, you have not heard of photographic filters. The expert examiner has not only heard of them, he *has* them! A large assortment

of them! A photographic filter is a glass plate which allows certain light-rays to pass, but 'filters out' certain others.

"Suppose Uncle John's will is brought to me. I want to find out whether there is any writing underneath the blot of red ink. I photograph that section of the document, using the filter through which red rays will not pass. And there on the photograph, for a jury to read, are the words you thought you had obliterated—'The Fido Dog Hospital.' The net has closed around you.

"BUT suppose you know all these facts I have been explaining; and you say to yourself, 'Well, they won't have a chance to catch me that way! I'll be too smart for them.' Perhaps Uncle John's will covers one page, with a few lines on a

"If I suspect that a document, written in ink, has been altered in any way, I simply take a gold or a quill pen, dip it in the proper chemical—'re-agent' we call it—and touch a small spot on the suspected writing and also on the unsuspected portion. If one spot shows, perhaps, bright green, and the other turns carmine, I know they have been written with different inks, and I proceed to run down this clue.

"There are many other tests for ink. For example, if I suspect that words have been eradicated, I dip a gold or a quill pen into the proper re-agent and draw a line across the suspected area. If no writing *has* been eradicated, this line will be colorless. But if it comes across an 'eradicated' bit of ink, it will immediately show dark, or black, specks. Then I know

it is a case for fuming. I get out my *fuming* apparatus and reproduce the writing which someone has attempted to destroy.

"The camera is the arch-enemy of the crook who fools with documents. Aided by

the microscope, it is a marvelous detective. For instance here is a document in which there are a few disputed words. The man who signed the paper admitted that it was genuine, but claimed that these few words were *not there* when he signed it. There are several details which prove that he was right; but I want you to look at just

one of these details.

"When calendered paper, such as this document was written on, is folded, it breaks the surface sizing, exposing the softer texture underneath. If anything is written in ink *across* the fold, the ink will run into this break. You may not be able to see this with the naked eye, but the microscope will show it with startling clearness. Here is a photograph of the document, made with the aid of the microscope. You can see that wherever the *disputed* writing crosses the old, the ink has run along the break! This proves abso-

ement with them  
ar mind the impos

(Top) Enlarged typewriting from two portions of a letter. The upper line is from the main part of the letter, which was dated "Dec. 15, 1908." The lower line is from the postscript

(Left) The upper "m" is from the first line above; the lower "m" is from the second line. It proves the postscript was not written before February, 1916, the date when that design of the letter was first made

second page. The provision in regard to the dog hospital comes in these last few lines. So you retain the original first page and write the remaining few lines on a new page, putting your own name in place of that despised hospital.

"Even supposing you could exactly reproduce Uncle John's writing and signature—which you cannot do, as I will explain later—your trick can be detected in other ways. In all probability, you do not use the same ink Uncle John used. And inks differ very decidedly in their composition.

## Wick's Writing

## Questioned Writing

## Grant's Writing

A man named Grant forged some papers in the name of a Swede, Olaf Wick. Mr. Wood compared specimens of Wick's known handwriting with that of Grant and with that of the questioned papers, and proved that Grant wrote these papers. A few of the comparisons are shown above. Wick always joined an initial "O" to the next letter. Grant never did this. Wick made a "D" with the loop to the left. Grant made a "D" quite differently. His "S" and "I" were entirely unlike the "S" and "I" made by Wick. Grant tried to copy Wick's, but habit was too strong for him.

lurely that those words were added *after* the document had been folded. They were not there originally. And this almost invisible thread of ink was enough to convict the guilty man.

"Here is another extraordinary document. Some years ago, a certain rich woman died, leaving her property to charity. However, some of the relatives produced a paper, which they claimed she had signed almost twenty years before her death, acknowledging a number of claims against her estate. This document, if genuine, would have given more than a hundred thousand dollars to the relatives who presented it.

"It purported to be signed by the dead woman and by her mother, who also was dead. The mother had been born in 1818 and must have learned to write about seven or eight years later. Yet her signature was in the Spencerian style, a system which was not even introduced until she was about forty years old! Whoever got up this paper did not know this, and so made a bad slip. But the scientific expert knows just what styles of handwriting have been taught at various periods. You may think you do not write now as you did when you learned as a child. But there are certain fundamental characteristics of the system you were taught then which you never lose.

"I WAS pretty certain, therefore, that the mother's signature to this paper was a forgery. Next I wanted to compare the daughter's signature with unquestionably genuine ones of the *same date* as the disputed paper. But that had been a long time ago and, at first, we could not find any of her signatures of that date. Then—for fate often seems to conspire against the wrongdoer—we discovered that the woman had been made executrix of a will about the time the questioned paper was dated. We searched the court records of that date and obtained nine of her signatures.

"These early signatures were strong, clear, and forceful. The disputed one, al-

leged to have been made *at the same period*, was literally years older! It had been copied from her signature as she had made it when she was an old woman. Again, whoever produced that document had made a bad slip.

"The fluid with which it was written puzzled me. Evidently an attempt had been made to give it the appearance of ink which had faded with age. I was sure it was not a genuine ink, but something that had been mixed up for the purpose.

"WHEN I had photographed the document and was developing the plate, I was surprised to see two groups of words flash up more quickly than anything else in the picture. To make sure that this was not accidental, I made another plate and developed that. Again the same words flashed up before anything else appeared.

"Here was the explanation. The main portion of the document had been written with a purplish-blue fluid, while these particular words had been written with a purplish-red one. Blue photographs faintly; red photographs strong and dark. Part of an important date had been written in the purplish-blue which had been used at first. But when the writer had got as far as 'Thursday, Sept.' he must have realized that he did not know on what day of the month a Thursday would have fallen in that particular year. So he left the rest of the date blank, finished writing the remainder of the document, and then took his time to hunt up the right date.

"He probably thought he was being very shrewd and careful. But when he got the information he wanted, he found that he had to mix up some more home-made 'ink.' And *this time*, he got it purplish-red instead of purplish-blue! With this new mixture, he filled out the unfinished date and wrote another line which had occurred to him in the meantime.

"These two bits were the ones which the camera instantly revealed as different from the rest. And with this, and all the other evidence about the signatures, the

court declared that the document was not a genuine one. The relatives did not get their hundred thousand dollars.

"People often tell me that it would be impossible to identify their signatures because, as they say, they 'never write twice alike!' They are quite right about the latter part of that statement. No one ever does write his name exactly as he has written it at any other time. That's where the forger, who traces a signature over a genuine one, makes a fatal mistake. If two signatures of your name are absolutely identical, one of them is a forgery. There is no question about it.

"But, while you 'never write twice alike' in every minute detail, you always write like yourself! You may try to copy another's handwriting. But you never can do it absolutely.

"For instance, I had a very interesting case out West a few years ago. A man named Grant had taken up land in Oregon; and a Swede named Olaf Wick had taken up land across the road from Grant's place. A short time before this Swede was to acquire final title to his property he disappeared. Grant at once took possession of the Swede's land and farming implements, claiming that Wick had got tired of the life, had sold out to him and gone off.

"GRANT presented to the bank in a town near by a check signed with Wick's name. It was for the exact amount of the Swede's balance at the bank and the money was paid to Grant. He also produced a relinquishment, which he claimed the Swede had written, transferring the latter's right in the land to Grant. He also, as we found later, drew out money which Wick had deposited in a bank in Wisconsin.

"He had thus got hold of all the Swede's money, of his tools and machinery, and was in a fair way to get the land also when the Federal officers became suspicious. The relinquishment was submitted to me for examination, (Continued on page 90)

# Why I Quit Working For My Wife's Father

**I**T WAS fifteen years ago this June, though it certainly does not seem so long. We were sitting out under a big tree on the campus, talking in a confident college fashion about the World which we were so soon to enter, and about which we knew so very little.

"Well, it'll be several years before this old place sees me again," Steve Pulsifer exclaimed. "But when I come, believe me, I am coming in style—car, chauffeur, golf bags, and all the rest."

"That's my idea," Al Greening agreed. "Fifth year, reunion in a flivver; tenth year, reunion in a big red touring car; fifteenth, reunion in a brand-new shining limousine with a man to say, 'Yes, sir. Where to, sir?' That's the life!"

Mike Osborn and I said hardly anything, feeling that we would be lucky if we were able to come back on the trolley. We were quite accustomed to playing audience while Steve and Al held forth; and usually the experience was pleasant enough. But on that day there was an unwonted seriousness, in my feelings at least. College was nearly over, four glorious years of no responsibility, years which were supposed somehow to "fit one for life." And here was Life staring me in the face, and I had no idea how to meet it.

That, as I said, was fifteen years ago. I recall the incident because it illustrates the curious tricks which fate sometimes plays. Anyone who looked appraisingly at the four of us that afternoon would have said that Steve, with his charm and habit of winning, was headed straight for financial glory, and that Al's brilliant mind would insure his eminence; while Mike and I, at the best, would make only a modest living. But how differently things have turned out!

Steve Pulsifer, his hard muscles now degenerated into fat, his hearty laugh a little forced, is a traveling salesman, and, to all appearances, will be a traveling salesman the rest of his life. About Al Greening our information is not trustworthy, since he has never been back to a reunion; but the report is that he is teaching in a little academy somewhere in Vermont. Mike, the unpromising, plugged his way through medical school, specialized on the stomach, and people pay him

fifty dollars an hour in exchange for his conversation.

Of the four, I was the only one to come back to each reunion in an automobile; but I reversed the program which Al Greening had suggested. I went to my fifth reunion in a limousine; to my tenth, in a touring car; to my fifteenth, in a flivver.

But the flivver was mine, paid for with my money. And when, last week, we got

leaned over and fumbled with his napkin, not wanting to have Ethel, at that moment, see my eyes.

If one of my reporters turned in this story to me I would blue-pencil it and send it back. So far there is nothing much to indicate what it is all about. Let me take a fresh start.

My father is professor of physics in the little Middle-Western college where I was graduated fifteen years ago. His salary is four thousand dollars a year; in five years more he will be eligible for one of Mr. Carnegie's pensions. I am one of four children; my two sisters are married and my kid brother is a civil engineer.

I sometimes think that if I were asked to give a definition of a cultured home I would answer: "One in which there are plenty of books, and where money is never mentioned." The chief advantage of having a lot of money is that one should never have to think of money. Yet I have observed that the families which have most, usually think and talk about it most.

My father, who never had any, seldom gave it a thought. I doubt if even now he has any real notion of the financial gulfs that separate the alumni of the old college. They are all his "boys" to him, and the millionaire and the country parson sit side by side at his table at commencement time knowing that here is one spot in the modern world where the thing that a man is counts, and nothing else.

By one device and another I managed to earn a considerable part of my college expenses. I waited on table for my board, sold stereopticon views in the summer, and in my senior year I realized quite a profit from my work as editor of the college paper, which was conducted as a private enterprise, dividing its profits among the senior members of the publication board.

I enjoyed editing it, and the paper stirred up more rumpus and earned a larger profit under my direction than it had for several years. But somehow it never occurred to me that newspaper work was my calling. Not until I reached the city, and took a newspaper job because it was the only one I could find, did the smell of printers' ink get thoroughly into my nostrils. That smell, as every (Continued on page 12)

## Do You Know Anyone Like This?

**"I** KNOW a lot of men in business who have robbed themselves of the satisfaction of feeling that their position is really *theirs*—fought for and fairly won. They reached it through marriage or pull or good fortune or misrepresentation. Usually they are unhappy; and invariably they are sniffed at by every last employee under them. I am frequently thrown with the president of a great corporation who is not there because he deserves the place but because his father was there before him. Everyone knows that he is misplaced—and he *knows* that they know it. He is one of the most miserable men in our city. Some day he will go down and out; not even the control of fifty-one per cent of the stock can keep a man permanently in a place like that. And then it will be too late for him to start over again."

home and put our old faithful in the garage, and brushed the dirt off, and were having supper in the little house which is *also* being paid for with my money, I looked across the table at Ethel and smiled.

"Is it all right?" I asked.

"You *know* it's all right," she answered.

"No regrets?"

"Never."

At which I pretended that Edward, our second son, needed some attention, and I

"Look here, Carol. If there's anyone else you'd rather . . . rather go around with, I wish you wouldn't bother with me!"

# Where Their Roads Parted

The story of two young men and what happened to them

By Mella Russell McCallum

ILLUSTRATIONS BY GERALD LEAKE

**B**OB DAYNES and Dick Winter had just naturally gravitated toward each other at the university in New York City, where they were both "lit" students. They were care-free, long-legged, scrubbed-looking, crisp-haired. Typically pleasant to look at—Dick dark, Bob blond. Their goal was the making of literature. It was rather more than the usual evanescent ambition of youth. Otherwise, they were quite normal.

Although they were inseparable, it came as a shock to Bob when he learned, at the close of the sophomore year, that Dick's family was badly off financially. They hadn't discussed families. He knew the Winters had a half interest in a music store in Grand Rapids, and that was all he knew.

"I'm quitting school," Dick announced calmly.

They were in Bob's room. Bob lay on the bed, coatless, smoking. Dick sat astride a suffering chair.

"You're—what?"

"Uh-huh. Got a job on the 'News.' Cub reporter next week."

"I'm British when you make jokes!"

"No joke. My sister's got to go to the hospital. Expensive. They've kept it from me. Wanted me to graduate in high feather. But it's leaked out—thank God!"

The pipe dropped feebly from Bob's lips. Were their plans to go wrong so soon? They had agreed to go into the newspaper game together, as soon as they had their A. B.'s. Then they were going to see the world, also together. All as a preface to writing literature.

Suddenly Bob made a movement like a closing jackknife, and swung his feet to the floor. "Look here! You don't have to quit just because your checks do. Let's get ourselves a pair of jobs. There are a lot of things we do well—janitor work, for instance. Then, with my check divided between us—"

"No-o!"

"Why not? Say, aren't we— Well, you know!"

"Sure, I know. I'd just as soon take your money. But there's more of it! Sis'll need luxuries when she's convalescing. I know. I had typhoid. It's up to me to see that she gets them."

Bob got up. He stooped before the mirror, and began to brush his hair hard. "You won't get your tag. Not that that counts much outside, they say. But I don't believe we can get any too much of this prof-and-book stuff for what we want to do."

"Sure, I know that. But I hope I'm not a rotter."

"But you will come back later, of course."

"No-o; I won't be back. Going to send a regular sum home."

"The deuce you will! No one ever sends money out of New York."

"Then I'll establish a precedent." The chair under Dick's hundred and sixty pounds suffered audibly.

Bob clapped his brushes together and got himself into a belted tweed coat. It was the dinner hour. They set out for their favorite cafeteria.

Presently they were carrying aluminum trays in a jolly crowded room that held an optimistic odor. "Fricassee chicken," Bob said to the girl behind the steam table. Dick selected one of the masquerades of the humble hamburger, by name "Creole steak." It occurred to Bob that Dick was taking cheaper dishes lately.

They went on with their problem. "It knocks me cold, your going," Bob declared lugubriously.

"It's just a temporary hitch. You'll be with me in a couple of years."

"Yes, I suppose so. And, anyhow, you can get a room near the dorm."

"I've already engaged a room downtown—East Fifteenth Street. One of the 'News' men was leaving it. It's cheap, within walking distance."

**B**OB frowned. He didn't like the thoroughness of Dick's new attitude. "Look here! If you go to giving so much thought to pennies you'll get sidetracked. You know what Professor Havens says: 'A writer, to succeed, must possess a certain ruthlessness.' You can't afford to let anything interfere with your—with your—" Bob gulped, and took the plunge, the occasion seemed to warrant it!—"your career!"

The code of the undergraduate forbade a word like "career" in private conversation. "Culture" could be coasted over by "prof-and-book stuff," but they had never hit upon a face-saver for "career."

"Darn it, I know all that!"

Dick's savagery awed Bob. Dick was mild. They finished dinner in silence, and went out.

At the dormitory entrance they parted. Bob had to study, and Dick had an eight-o'clock lecture. Dick gulped out a final speech.

"It isn't that I don't want to stick. I'd do worse than collect garbage to stay. I don't want to live down-town, either. I'd like to let family affairs go to the dickens! But—I can't!"

Bob recognized finality.

Next week came examinations and festivities. After which Bob left for Rochester, and Dick moved down-town.

Bob always spent vacations at home. The Dayneses lived in a lovely old house with a tennis court in the rear. Bob had a home girl, Carol Hemmingway, with whom he had played around for years. Carol was a Vassar student, a ruffly-haired blonde, pretty as mischief. She

could play hard tennis. Bookish, too. A nice combination, Bob had always considered.

Before this particular summer was over he very nearly drifted into an affair with Carol. She *was* a peach, every way.

But something held him back. Something said, "Careful, now! Remember your career! Don't commit yourself."

On the way home from a country club dance one August night, he began, "Carol, I wish—" and stopped.

"Wish what, Bob?" There was a shadow in Carol's blue eyes. A shadow with a light behind it.

"Nothing. I'm a fool, that's all."

"Oh!" The light behind the shadow wavered.

"Look here, Carol, if there's anyone else you'd rather . . . rather go around with, I wish you wouldn't bother with me!"

"Why shouldn't I . . . bother with you?"

"Well, because— Oh, I can't explain without seeming like a rotter! And, anyway, it would sound as if I were taking a lot for granted." He was miserably earnest.

Carol laughed a little: "Bob, are you . . . warning me that you aren't seriously intentioned?"

"You don't put it very flatteringly. But—perhaps we may as well let it go at that."

"Oh, Bob, you're terribly funny!"

He was silent. He didn't like to be laughed at.

Then her laughter died and she spoke low: "I feel sorry for you, Bob!"

"Sorry for me! For heaven's sake, why?"

"Oh, . . . I just do."

"Don't waste sympathy on me, Carol. I assure you I don't deserve it."

**W**HAT did she mean? Well, he wouldn't pry. He had done his part. He had warned her. It would be pleasant to—well, pry—talk personalities. But, no, sir! He'd seen fellows get tangled up, and their ambitions had always gone glimmering. Not for him. He was going to write. He had warned Carol. Now, if she still persisted in palling around with him, it wouldn't be his fault if— But there he was, taking a lot for granted again!

The subject was not reopened.

He returned to New York very fit. It startled him to find Dick looking fagged. Dick's weight had dropped. There was a new squareness about his face. Something young was slipping from Dick.

They talked late the first night, Bob sharing Dick's lumpy three-quarter bed, and finding it none too comfortable. Bob mentioned his lucky escape from a girl entanglement.

"Canny beast," was Dick's only comment.

Dick was making good on the "News," it seemed, and liked it.

"You're the lucky one," Bob sighed; "I wish I didn't have to stick at school."

"No, you're the lucky one," Dick contradicted quietly. And in his heart Bob knew it was true. In his heart he felt sorry for Dick.

"Oh, well. . . . When your sister gets well, you can come back."

"I told you I was not coming back."

"But why not?"

"Because—I hate to tell you, you'll ravel!—because my dad's had a slight stroke. Can't attend to business for a long time. Thank God, he has an honest partner! Honest, but dull. They'll just about get their living. And so I—I'm going to send Dad to a sanitarium. . . . Keep still, will you? Let me finish! I've got it all arranged. They'll take small weekly instalments on the bill."

**BOB** looked hard at the brother that was more than many a blood brother. Looked, and boiled over. "Dick, you fool! Where do you ever expect to get to? You can't saddle yourself with the maimed and the halt! You and I aren't responsible for our elders! We have a

clear right to our own self-expression!"

"Oh, shut up, Bob! You don't know what you're talking about. Your family's high and dry."

"But yours isn't in actual want."

"No; but you know how it is when you're getting over something serious—you need a lot of things. Now, at a sanitarium—"

"Oh, forget the sanitarium! You've got to have a certain ruthlessness!"

"I suppose you wouldn't do anything for your folks!"

"I wouldn't let them actually suffer, of course. Mark my words, boy, if you begin this way you'll always be a cart horse!"

"All right—I'll be a cart horse." Dick turned over creakily. "Good night!"

"You'll never get anywhere!"

"All right, I said!" shouted Dick.

Presently Bob heard Dick's slumberous breathing. Dick's mistakes never kept

him awake. What a pity, what a pity! Dick was throwing away his life. Dimming bright ambition.

They wrangled about it all winter. Dick couldn't take a girl out any more because it cost too much. Dick ate twenty-cent meals. Dick trimmed his cuffs. Bob thundered at him for it all: "You've got to keep the bystander's attitude!"

"Sure—if you can!"

"You can—if you will!"

**ROUND** and round, in a circle. Thus the year passed.

Then the goose was cooked: Returning to New York, after another summer of watchful playing around with Carol Hemmingway (he certainly gave that girl every chance to go with other fellows; it wasn't his fault that she didn't), he came down to Dick's room and a girl opened

the door for him—and he opened his eyes. For old Dick had never been that sort.

She was slim and dark, with naturally curly bobbed hair. Not so pretty as Carol, but nice-looking, with an expression of the unrest which is termed divine.

"You're Bob." She thrust out her hand. "Come in. Dick'll be home soon."

Bob couldn't speak at once. He saw that the room had been transformed into housekeeping quarters. There was a gasplate and some shelves behind a cretonne curtain.

The girl smiled. "Please sit down. Dick and I were married in July. He didn't tell you. He didn't want to spoil your summer!"

"I . . . see." Bob's tone was almost ill-bred.

They sat down. The girl smoothed a plait in her plaid skirt. "Dick says that—well, he says there are a number of things

"When are you going to get yourself a wife and

family, old bystander?" Dick demanded

you don't understand." A bright, cool color had come into her face. There was gay challenge in the gray eyes. "I hope you don't mind my speaking of it."

"Oh, no; I'm charmed."

It seemed as if he just couldn't stand it. He wasn't jealous, although he might well have been: Dick never again to be his Dick alone. He was soul-sick. He and Dick were brothers, with mutual aim. Together they must fight against the outside influences that streamed in to choke ambition. Only, Dick wouldn't fight! Dick let things stream in!

"I'm awfully glad to see you, Bob."

He was silent.

"You can't return the compliment. It's too bad, too," she sighed. "I'm really very nice."

"I have no doubt," he said stiffly. "But since we seem to have skipped the usual preliminaries, I wish you'd tell me: Do you

think you should have married Dick? He's going to be a writer."

"Oh—oh!" She was apparently choking. "D—don't writers marry?"

"It's a risk—before they're established."

"Aren't you ever going to?"

"Not until—until—"

"Until you have the world by the horns. I see. It will be safe enough then, of course."

SHE was laughing, and he joined in. But the gayety on his side was thin. "Just how do you square yourself?" he persisted. It was rotten bad taste to talk so to a bride. But the bride had invited it.

"Gracious! You're even worse than I imagined. Very well, I'll tell you: We . . . just . . . couldn't . . . help . . . it!" The gray eyes danced.

Bob grinned weakly. Poor old Dick, he thought. Cart horse!

Then Dick came in. He was thin, rather shabby, but with an air of lively contentment.

"Bob! I see you've already met Rita."

"Oh, yes," put in Rita. "He's furious with me. But he'll stay to dinner. You smooth him down while I go after supplies."

She whirled herself into a gray cape and jammed a soft gray hat down on her curls.

ALONE, the men faced each other. Dick laughed. But Bob's crusader flame never veered. His glance scathed Dick. He wanted to tear Dick away, out of here, before that girl came back. But he couldn't do that, of course. He couldn't do anything! "Oh, what have you let yourself in for now?" he groaned.

"If you don't know, then I can't tell you," was the quick, quiet answer.

"Have you any money?"

"Enough. A hundred or so apiece."

"Gods! Still sending money to Michigan?"

"No. Things are better there. Paid the last of the sanitarium bill last week."

Dick began to fix the table for dinner. As he removed a pile of books and magazines, a loose page of typing swooped to the floor. By the indentation, someone had been writing verses! Dick captured it and placed it with its fellows.

Then he brought from the dresser a clean, gay Japanese lunch cloth, somewhat wrinkled. The table drawer yielded, along with writing materials and extra typewriter ribbons, some flat silver of the ten-cent-store variety.

"This is just temporary, living here," Dick was saying. "We intended to wait longer. But—we didn't. Rita's on the 'News,' too. Straight reporting. No sob sister."

Bob was slightly relieved.

"She writes poetry, besides."

Contemptuous silence.

Dick flung open the door when he heard her coming. "Loaded to the gunwales and just afloat," he sang out. He took from her a series of paper bags.

It appeared that Rita could cook. Lamb chops and new string beans and creamed potatoes are not to be sneered at in any quarters. Bob admitted something of the sort; admitted it out loud. But he added to himself that she'd best confine her avocational endeavor to cookery, instead of poetry.

"The o-rig-i-nal baby lamb chop! That's what the butcher always says." Dick speared one gayly and placed it on his wife's plate.

Rita gave them homemade tapioca pudding for dessert.

When Bob left she said, "Try not to hate me too much."

"I'll try," he said, "if you'll promise not to let him forget his—his—"

"His career," she (Continued on page 102)

# Confessions Of a Common Man

*By E. W. Howe*

I AM a common man, and come of a long line of common folks. Nearly everybody knows as much as I do, and a good many know more. I have always been satisfied if rated as an average, since the average in this blessed country is reasonably high. The noted men I meet do not seem to know enough more than I do to make any great difference; but usually I decide they have been more careful, and have taken better advantage of opportunities more abundant in the United States than elsewhere. I do not recall having known a real genius, but I have known hundreds of common men who have achieved some sort of distinction and, when I look into their success, I find it is due to behaving better than the average.

I have always been impressed with the wisdom and steadiness of the best of my neighbors; and stories were constantly coming in from other neighborhoods, towns, cities, and countries of men still more capable. And every capable man is a valuable teacher to all of us; he could not hide the methods of his success if he would.

Some men are referred to, with profound respect, as "thinkers," as though it is unusual for men to think. It isn't: there are no fools except those who do not live as comfortably and successfully as they might. The old charge that men do not amount to much isn't true: their accomplishments from the old Neanderthal man to the present American is a story more marvelous than anything in the "Arabian Nights."

When twelve years old, I lived on a prairie farm in Missouri, to which we had traveled in covered wagons from Indiana. One day my father, who was a Methodist preacher, announced that he had purchased a weekly paper at Bethany, the county seat. Next morning he took me to town and, turning me over to the foreman, said I was to be made into a printer.

Within six months I was compelled to set two columns of brevier a day, or get a whipping at night. I submitted to the whipping for a time, thinking that would end it, but it didn't. I was compelled to finish my two columns before going to bed, or take another whipping the following morning. My brother Jim, who was a good boy, always completed his work on

time and assisted in mine. I recall vividly to this day my brother standing on a box before a printer's case illuminated with candles and hurrying to complete work I had neglected during the day. He was a sincere friend, and I could not comfortably impose on him; so finally I began doing my task as rapidly as possible. The result was I became a fast worker, a habit from which I have benefited all my life.

day as noted a man in printing offices as Charlie Chaplin is now in moving picture theatres. So the distinction was great.

During several years of early wandering, my partner was Joe Franklin, printer, piano player, and drunkard. Half the time he was employed in variety and dance halls, where he furnished piano accompaniments to bad singing and gambling. The preacher I lost on leaving home turned up again in Joe Franklin, who was continually giving me good advice; and, indeed, all the printers I knew insisted that I behave myself. I have never been in company so rough that good advice was not abundant.

I have never been a drunkard or thief, although I have put much in my stomach I would have been better off without, and have been guilty of many offenses when better conduct would have paid me better. I am, in short, one of the millions of petty offenders who have not done as well as they might have done. I have been a fool many times, and now confess that usually I have known better.

At nineteen I established a weekly paper in Colorado, and it was so badly edited that I lately destroyed the files to keep my children from seeing them. But gradually I acquired a little more sense from association with smart and critical neighbors, always abundant in my life, and by slow degrees picked up, in many places, such knowledge of life as I have.

H. L. Mencken, a New York literary critic, once wrote me that he had been making a collection of my printed "sayings," and was willing to find a publisher

for them. You may be sure he had instant permission, and the book was issued in New York under the title, "Ventures in Common Sense." Later a London edition appeared, and I have just seen an English review referring to the contents as sound and useful "philosophy."

This is the most surprising thing in my life, since I know no philosophy not current among the common people. Indeed, they taught me the little I know, which amounts to this:

One must do his work and, to avoid a whipping, he should do it as quickly and efficiently as possible. Walt Mason once wrote in *THE* (Continued on page 92)

## Why Plain People Have So Much "Horse Sense"

"THE most valuable lessons I have learned have come from plain people who neither write for print nor deliver public lectures," says Mr. Howe. "I have profound respect for the people in the audience. They are forced to consider their problems with sincerity, whereas speakers and writers are usually artificial; I know no writer who has discussed real life as I have heard it discussed in private. Writers, actors, orators, are mere entertainers we call on when real life is at rest. The sages one encounters in books are usually the most entertaining writers, rather than the soundest thinkers. I can go up my Main Street (and I have always lived in the country), and hear sounder philosophy than any to be found in ancient or modern libraries. The people know life, and picture it accurately to each other.

"I am convinced that no average person fails because of lack of intelligence. All of us have sufficient education, after attending the world's school thirty or forty years. I know almost no one not able to get along airily well, if he would. One of the smartest men I know learned to read from seeing newspapers about the house. His education is entirely newspaper education, corrected when necessary from intimate association with the people and their affairs. I have seen college graduates try to fool him, and fail."

At first I made many typographical errors, but as I had to correct them I quit that also, in the interest of economy.

I was a tramping printer when fifteen years old, working in Salt Lake City, Cheyenne, Denver, and Omaha, which were very interesting frontier towns in that remote period. I longed to explore them and did, but first finished my day's work as well as I could.

The most notable thing in my history dates back to the time when I was whipped into the habit of being a rapid typesetter. After two unsuccessful attempts, surrounded by cheering printers, I defeated Bennett Allen, who was in that

# "The World Makes Way for a Man Who Knows Where He's Going"

The story of Frank Davis, commander-in-chief of 8,000 insurance agents—At 29, aimless; then he examined himself, laid out a bold course of action, and now, at 42, is doing a great and important work

*By Merle Crowell*

**T**HE world makes way for a man who knows where he's going." In a plain black frame this legend hangs on the wall of the New York office where Frank H. Davis sits as commander-in-chief of the eight thousand agents of the Equitable Life Assurance Society. It has been tacked on the wall of every office that Davis has occupied in the past twelve years—during which he has had one of the most meteoric rises from obscurity in life insurance history.

I have never run across a story that even remotely resembles this one of Davis. In 1910 he was twenty-nine years old and going nowhere in particular. He had tried a little farming, taught country schools for a time, worked for a while in a seed store, sold graphic charts to rural school boards, gone back to farming again, and finally had been elected clerk of Mills County, Iowa, where he had been born and brought up. He held this office for two uneventful terms, in which he did his work about as it is done by hundreds of other faithful and intelligent clerks from Cape Cod to Puget Sound.

When his two terms were up, Davis was faced with the necessity of getting a job again. While he was juggling different possibilities in his mind, there suddenly swept over him the thought that, up to this time, he had never had a definite program of life—that he had never decided where he wanted to be ten years hence, or how he was going to get where he wanted.

Right there Davis did something that few men ever have the courage or patience to do: He went into a frank and full executive session with himself. Taking his life to pieces, bit by bit, he analyzed everything that he had ever done or failed to do. It was an unsparing performance, but Davis was determined to find out what he was best fitted for. He charted his past performances, pulled up his impulses by the roots, and sorted out the things he had done easily and effectively

from the things he had done indifferently and without interest.

This self-analysis sifted down to two conclusions: that he had "shown most" as a salesman, and that he must take up some work to which he could harness his strongest positive asset—an intense interest in human beings, in their motives and interests, that had possessed him ever since his boyhood. This was the first of

took one square look at this trailing idea and pitched it into the discard. Most of his youth had been spent on a farm; but he didn't care for farming. Storekeeping held no appeal for his restless energy; the four years in the clerk's office had been bad enough, without tying himself down again. No, it must be some sort of sales job that would keep him moving and bring him in contact with many people.

Before deciding on the definite field he would tackle, Davis carried his analysis through to the third stage. Why did some men succeed and others fail, when both had about the same natural ability? He studied his own life again and the lives of scores of men whom he knew. Eventually he decided that all achievement was founded on two factors:

*Vision*—through which you look at facts as they are and as you may reasonably expect them to be in the future.

*Courage*—through which you act honestly and fearlessly on the evidence of these facts.

As one follows Davis through the significant years that lay ahead it is interesting to notice how every act of his is colored and shaped by this simple and carefully evolved philosophy.

While the ex-clerk was in the process of selecting the particular sales work he would take up, a life insurance agent dropped in on him.

"He certainly had a cinch selling me a policy," Davis told me, with one of his

hearty laughs. "I knew that he was a locally successful salesman, and all the time he was talking to me I was studying him and comparing myself with him. I wanted to see if he had something that I didn't have. When he finished his talk, and I had signed on the dotted line, I decided that the only thing he 'had on me' was experience in life insurance. Any lingering confusion suddenly cleared away, and I felt a positive conviction that life insurance was the (Continued on page 144)

## This Clerk Had Imagination

**S**OME people have vision—and some haven't. Here is Mr. Davis's account of one man who proved that he had vision:

"A young man whom I believe to be one of the greatest insurance underwriters in the United States got his vision of life insurance while sitting on a high stool in the Chicago office, handling applications and death claims. Hundreds of other clerks have had the same job, and seen nothing but file numbers in it. But he dug out for himself what it all meant. He saw the peace of mind and security afforded by adequate protection; the checks that went out to satisfy death claims became to him symbols of the difference between comfort and poverty—between hope and despair. Soon he was burning up with a vision of insurance—and we turned him loose to sell it.

"His success has been as phenomenal as his enthusiasm."

the three steps by which Frank H. Davis found himself.

His second step was to analyze every business and profession with which he was familiar and toward which he could unearth the slightest inclination. How did the demands of each match up with what he had to offer?

His father, who had died a few years before, had always wanted him to be a lawyer, and Davis had thought vaguely from time to time of so doing. Now he

# A Great Expert Reveals Precious Stones

What stones are most popular and why?—Can you detect real diamonds from  
they are sometimes consumed by fire?—How are styles in jewelry

An Interview with  
*As Reported by*

NOTE:—Mr. Wodiska, who has been a New York manufacturing jeweler for fifty-three years, is one of the most widely known living authorities in his field.

ONE afternoon several years ago a man came into my shop with a quick and cautious tread. From the depths of his wallet he produced a small package and unfolded it.

"What would it cost to have you manufacture for me the mate to this precious diamond earring?" he asked. "It's a family heirloom that I value highly." I examined it and looked at him curiously.

"About two dollars," I said. "It's

think that few women would have made the mistake that this man did. The stone was plainly paste; it had none of the life and sparkle of a genuine diamond or the better class of substitutes. Many women have what amounts to a sixth sense in "spotting" imitation diamonds—particularly when they are worn by other women. This information evidently has a real value in helping them to size up others of their sex.

I do not mean to infer that curiosity about the genuineness of precious stones is confined to women, however. During my fifty-three years in the jewelry business I have been asked continually, by all kinds of people, to explain how genuine

diamonds can be told from imitation ones. Many of the inquirers want to be protected in their own purchases—but a goodly percentage of them seem anxious to be able to tell whether their neighbors down the street, or the man sitting opposite them in the street car, can really afford to buy his wife such expensive stones as those she is wearing appear to be.

I wish that I could give a definite and satisfactory answer to these inquirers. But this cannot be done despite all statements to the contrary. From time to time I have read in the public print at least a dozen "recipes" for distinguishing between real and imitation diamonds. Some of these experiments will show, indeed, whether or not a certain stone is paste—provided that you have possession of the stone in order to try them out. But none of them will expose the difference between a genuine diamond and those other stones that are occasionally passed off as

nothing in the world but a piece of worthless glass in a ten-carat setting."

The visitor's face grew pale and he leaned weakly against the counter.

"Oh, I've been asleep!" he murmured, more to himself than to me. "Now I know what is going on."

"Are you ill?" I asked, a little alarmed. "Can I do something for you?"

"Not ill—but disillusioned!" he said bitterly. "But I'm in control of myself now. . . . Watch the newspapers and you may learn something about what all this means." Then he turned on his heel and stalked out of the room.

In looking back on this incident I often

Here is Doris Kenyon, the motion picture star, holding in her hand the largest uncut opal ever found. It weighed seventeen ounces and it was estimated to be worth a quarter of a million dollars. At the right is the head of the scepter of the King of England, set with the largest of the stones cut from the famous Cullinan diamond. In this photograph both the scepter and diamond are greatly reduced. The actual size of the stone (516½ carats) is 2.322 inches by 1.791 inches

Thane Wilson

diamonds, notably the white sapphire and the white topaz.

To the average gem buyer I can suggest only one method of making sure that he is buying a genuine diamond: *Deal with a reputable and established jeweler.* His name and reputation are the best protection that you can have. Moreover, they are his most valuable business assets, and he will do everything in his power to preserve them.

TO SOME of the other questions with which my daily mail is sprinkled I can give, fortunately, more comprehensive answers. These questions have a wide range: Does genuine gold tarnish under normal conditions? Do pearls really lose their luster unless worn? What makes some expensive jewelry turn black? Do I know of any actual experiences to prove that the opal is a stone of ill omen? Is it "correct" nowadays for men to wear wedding rings? What are the birthstones for the various months? How have styles in jewelry changed—and do the old styles

in settings show any signs of coming back?

I might continue these questions indefinitely; but it will be more to the point to answer some of those I have already set down.

Many years ago, when I first started in the business of manufacturing jewelry, a friend of mine, who was an amateur chemist, told me one day that he was glad to be able to throw a little business my way.

"I'm about to get married," he said, "and I would like to get from you 18-carat gold wedding rings for myself and my wife."

I did not handle wedding rings at the time, but I told him that I would be glad to fill his order. So I obtained the rings from an old house down the street and turned them over, with only a nominal profit to myself. A few days later my

Above are the nine principal stones cut from the Cullinan diamond. The one in the upper row directly over this legend is 1.771 inches long and 1.594 inches broad—and the true proportions of the others correspond. The biggest two of these stones are by far the largest in existence.

At the left you will see the actual size, in the rough, of the marvelous Cullinan diamond, discovered in some debris at a mine near Pretoria, South Africa, on January 27th, 1905. It weighed 3,253½ carats—or more than 1½ pounds avoirdupois—and was clearly broken off from a motherstone. It was estimated to be worth from \$2,500,000 to \$5,000,000.

friend came back in a wild rage and charged me with having swindled him. The gold rings had turned to a grayish white.

I was greatly upset, for I knew how much damage an incident of that kind might do to a beginner in business. I explained to him the circumstances of the whole transaction and insisted that he accompany me to the shop of the dealer from whom I had bought the rings, which he did reluctantly.

THE dealer was an old hand in the game. He looked at the rings and then glanced searchingly at my customer.

"Have you been handling any chemicals lately?" he asked.

"Well, I've been trying a few laboratory experiments at the house."

"Been working with mercury?"

"Yes. Why?"

"Wife been around it, too?"

"Sure, she sometimes helps me in the laboratory."

"I thought so," said the dealer, laughing. "As a chemist, you ought to know that mercury is a very flighty substance. In a reasonably warm temperature it will form a deposit on any other metal which comes near it. Your rings have a mercury overcoat. I'll polish them up for you,

Above is the photograph of an oyster shell recovered by pearl fishers on the Australian coast. It shows the customary position of pearls in the shell. Their formation is one of nature's miracles. It results from some irritating substances (usually a grain of sand or a small parasite) getting inside the shell. At the right is one of Paris's jewelry novelties—a watch set in a finger ring.

and they will be just as good as new."

My friend departed with smiles and many apologies.

If a gold ring happens to tarnish suddenly, many people jump to the conclusion that they have been cheated. But there are many other possible explanations. Sometimes an excess of acid in the perspiration from the skin will attack the alloy and discolor it. Other substances that may have a similar effect are sulphur, rubber, iodine, ointments containing mercury or arsenic, hair dyes, certain complexion lotions, and many solutions used for cleaning fabrics and leather.

At different times people have complained to me that the turquoise in their ring has turned to a pale and unlovely

The pearl is another gem that requires careful custody. It is composed of 92 per cent carbonate of lime, 6 per cent organic matter, and 2 per cent water. This water content furnishes the real problem. Unless pearls retain it they are likely to grow dim or to crack. With proper care, however, they should hold their soft luster indefinitely.

It is not wise to leave them in any receptacle lined with cotton or velvet, or any other absorbent material colored with chemicals—for fear that the water will be drawn out, to the detriment of the delicate outer skin. Experiments have proved that the most satisfactory results can be obtained by keeping pearls in a container lined with a fine quality of oiled silk.

Sometimes face powder used freely by women is sprinkled over pearl necklaces, and gives them a dull alabastrine appearance. Any genuine pearl necklace should be wiped carefully with a piece of soft chamois after it is worn. This removes perspiration and any other foreign substance that may cling to it. If you are unfortunate enough to possess pearls that have grown dim you might try the novel plan that the Ceylonese employ to restore the luster of this gem. They feed the dull pearl to a chicken, which is killed shortly afterward, and the pearl is then removed from its crop, supposedly restored. I said that you "might" try this plan—but please don't put me on record as recommending that you do so.

I have been asked frequently whether there is any truth (Continued on page 194)

At the left is a photograph of one day's diamond wash at the Kimberley mines, in South Africa. At present the world's diamond markets are supplied almost entirely from the South African fields. Beside this modern Golconda, the fabled treasure house of Ali Baba and his Forty Thieves sinks into insignificance.

green. This can easily be explained. The turquoise is a delicate stone, and its soft shades of azure or robin's-egg-blue can be preserved only by careful treatment. Since water is likely to affect it, the turquoise should never be worn on the hands when they are being washed, and the owners of this stone must stand against contact with acid and alkali. Some jewelers claim that the use of certain perfumes tends to make a turquoise change color. All turquoises, in time, change color from the perspiration of the hand.

Mrs. Edward B. McLean, of Washington, D. C., wearing the famous "Hope Diamond." This is thought to be part of a blue diamond brought from India in 1632. Later it passed into the possession of the French royal family, where started the grim series of superstitions with which its history is popularly vested. Mrs. McLean bought it in 1909 for \$160,000.

# And So I Left the Ministry To Go Into Business!

The confessions of a preacher who was driven out of  
his profession by poverty

**T**HE fact that I entered the ministry in the first place was the result of a long process of early training. I was brought up in a strict Presbyterian home. My father was an elder in the church and my mother a very active worker. The most esteemed friends of my parents were the ministers whom they had the honor of knowing. In fact, they placed these men on so high a pinnacle that I grew up to have a respect for them amounting almost to reverence.

One day I overheard part of a conversation between my father and a clergyman who was staying in our home while attending Presbytery.

"John is a fine boy," declared the preacher. "He ought to enter the ministry, and I hope he will decide to do it."

My mother had often expressed the same desire, but the fact that a member of the Great Calling considered me fit to follow in his footsteps seemed to impose on me a certain responsibility. As I grew to manhood I felt more and more sure that no work in the world offered opportunities for service which could be compared with those of a minister of the gospel. In fact, I came to believe that the ministry was the only logical place for a man who wanted sincerely to do unselfish work. It took me several years to learn that I was mistaken; but I did learn it in the end. Just how I learned it is what I am going to tell you—the story of why I left the ministry for the business world.

I hope no one will misinterpret my motive in writing this article. No one could feel more gratitude than I feel for the great things the Church has done and is doing. In fact, it is because those principles for which the Church stands are being applied in the workaday world that I was able to find a field for service out of the pulpit.

Also I should state here that I started life as a poor boy. I am indebted greatly to the Church for assisting me to get an education. Because of my intention to become a minister, I was given a scholarship

in a Presbyterian college, and in the theological seminary my entire expenses were paid.

I was twenty-six years old when I finished my theological course and entered upon my first regular work as a pastor. This was a small town in Virginia, where my salary was twelve hundred dollars a

child. I remained in this position six years.

Toward the end of my fifth year here I realized that it was time for me to make another change; for, as my children grew, my salary was becoming less and less adequate to meet the needs of my family. Also, our country had gone into the war, and prices had soared. Yet my income,

already stretched with very great difficulty over its allotted uses, was not increased. As our rent was almost doubled, we had to move to a cheaper location. This brought us into a neighborhood that was far from desirable, especially in view of the fact that we had children who were absorbing the influences of their surroundings. If I had been in any other business I would have demanded a raise in salary, but as a minister I felt a delicacy in making such a request.

About this time I had a call to another suburban church, at the same salary, but with a home furnished. I was considering taking the place, but the move itself would have cost more than the added revenue would have amounted to in some time. Moreover, I did not have the money to pay the moving expenses.

These circumstances drove me to a lot of serious thinking about my own future—in relation both to my family and to society in general. Toward the end of my eighth year of preaching, I took inventory of my stock in trade, and this is what the ledger showed: I was thirty-four years old, and my years of mental and material expansion would soon be over. I had been at work eight years, and in that time my salary had increased three hundred dollars. At that rate the most that I could reasonably hope ever to make was about two thousand dollars a year, and with that as a maximum I

saw no possible way to save anything.

The more I looked into the future, the more clearly did I see that my children would have to depend upon others for help if they got the education which it was their right to have and my duty to give them. Moreover, I saw nothing in prospect for my wife (Continued on page 122)

## No Man Wants to Feel Like a Grafter

**"EVERY** real man wants to pay his honest debts," says the writer of this article. "With a heavy heart I reviewed the abjectness of my position. I thought of the privileges of every self-respecting man, that had been denied me. For instance, in all my life as a minister I had never stayed at a hotel! When a clergyman attends a Presbytery or other church conference he is always entertained. Do laymen ever stop to think how tired of being a guest a preacher must become, how much he would like to have the independence which he can get only by paying his own way?"

"Let me tell you another thing! I am very fond of reading, but to buy magazines would have been too great an extravagance in our household. I would have had to do without periodical reading matter during the six years of my stay in the Washington suburb if one of my members, a railroad conductor, had not brought me all the magazines that people left on the trains. I wonder if any of the original owners of those magazines will read this article! If they do, I want to thank them here for the gifts which they unwittingly made me."

year. This salary constituted my entire income, as no parsonage was furnished. I stayed there three years, and during that time I had married and had one child.

My next church was in one of the suburbs of Washington, at a salary of fifteen hundred a year, again with no home provided. After a year here we had another

He helped her out, keeping his arm about her as he led her to the old doorstone and up into the entry to the schoolroom

# Number Nine Schoolhouse

The story of Malvina's great day

By Reinette Lovewell

**W**ONDER why the doctors ain't ever been smart enough to think up some way to cut out whatever 'tis women cry with," Malvina Marean considered, as she listened to the sound of spasmodic sobs in the room behind her.

She had come out upon the piazza, closed the green shutters before the open dining-room windows, and was prepared to rock patiently until Mary Emma dried her tears.

"'Twould certainly save a sight of trouble in this world if women warn't able to cry. Crying always riles men up. Might just as well go out in a pasture and wave a red rag in front of a bull as to cry in front of any man living."

She chuckled, her lips parting across even rows of artificial teeth.

"Wonder what they *would* do, if they couldn't pucker up and bawl every once in so often," she speculated. "Men take it out in hollering their heads off, or having dumb spells, or somethin' else. But women cry. All that started Mary Emma off was Sam's never saying a word about the lemon pie she took such pains with. 'Twouldn't a hurt him a mite, neither, to have *said* it was good. But that's the man of it. They don't see the need of praising a woman's cooking—think women ought to be satisfied if what they bake is *it*."

She hitched forward in her chair where she could get a better view of the highway.

"Oh, well!"—she dismissed the matter optimistically—"they'll get over it. First year young folks get married there's bound to be spats—always is. Sam shouldn't have flew up and kicked over the cat's saucer of milk, though. I suppose that was the last straw for Mary Emma—messing up her clean floor."

Miss Malvina lived in two up-stairs rooms in the house with Mary Emma and Sam, her husband, who were her next and last of kin. Sam was the grandson of her only brother, and he and Miss Malvina were the only Mareans left in the old farmhouse built more than a hundred years ago. Part of the place was hers; the rest Sam had inherited.

She squinted near-sightedly up the yellow dirt road toward the village. Miss Malvina's eyes were not as good as her ears. She had heard the sounds of shouting and knew what was coming through the cloud of dust around the bend. In a moment the school barge rattled into sight, packed with noisy youngsters swinging school books and dinner pails. On the front seat with the driver were the Adams boys, watching with envious interest his big feet shift the gears from high to low. The pigtailed of a dozen little girls whipped out in the breeze. A big boy

clownishly clapped a flowered hat on his red hair.

Old Malvina waved her hand as the truck tore by, watching it down the hill past the white schoolhouse which stood in the hollow just below the Marean farm. It was Number Nine; and before the town voted to transport all the children of the outlying districts to the Center, Miss Malvina had taught there many years. For that matter, she had taught in every one of the other ungraded schools of the town; but it was here, in the home district, she had longest been "Teacher."

The school lot originally belonged to old Matthew Marean and was divided from the surrounding meadows by a stone wall. In the fall sumac and alder flamed behind it with the first frost; gentians, unbelievably blue, shot up their delicate cups, defying coming cold.

Now that Miss Malvina taught no more, the sturdy deserted old structure seemed to her like a friend, a companion. The key to Number Nine was inside the clock in the Marean kitchen, and every few weeks Miss Malvina went down the hill, let herself in, and sat for a while at the desk which had so long been hers. The one skeleton in the closet of her peaceful life was the fear that the town would tear it down or move it away.

**I**T WAS late in June. Schools would soon be closing for the summer. Teachers, she knew, were already marking examination papers. The children were bringing in daily great bunches of laurel and daisies. Graduating exercises were being planned—pieces to speak memorized, compositions written.

A consuming longing to go back across the years possessed her. She wanted, torturingly, to teach school just for a day; to open at nine and close at four. She had so little to do now—only to make her bed in the morning, to putter with the family mending, to sit in the sun and dream.

Mary Emma came out to feed the hens. Watching, Miss Malvina saw Sam slip from the barn and join her, saw his arm go around her shoulders, Mary Emma's yellow head drawn close under his chin.

Miss Malvina was glad they had made up; but, some way, the pretty thing she had seen only made her more lonely, shutting her out completely from their united lives.

She pulled herself from the rocking chair, went indoors, put on her hat and cape, took the schoolhouse key and started down the road, walking in the grass and clover blossoms which bordered the beaten footpath.

The key turned the lock, letting Miss Malvina into the entry with its rows of empty hooks. Beyond was the one room, blackboards on the walls, a problem in fractions still faintly chalked, a rule writ-

ten out about the Least Common Multiple and the Greatest Common Divisor. The round stove had grown rusty, the children's seats and her desk were covered with thick dust.

Miss Malvina mounted the platform and sat down in the chair she had used so long.

She thought of how she used to "open school;" the roll call, a chapter from the Bible, the Lord's Prayer. She saw again the five-year-olds in the primer class, the big boys and girls working out examples in arithmetic.

**S**HE had begun to teach when she was seventeen—and she had taught for forty-eight years. Some of her pupils' children had come to her, repeating the miracle of physical immortality by the color of their hair and eyes, reminding her of their fathers and mothers by gestures and tricks of speech. But most of the youngsters enrolled in her classes had left town and had not come back. Only a few had settled near by.

She was so deep in her dreams that she did not hear the smooth purring of a machine which had halted outside. But foot-steps in the entry startled her and she looked up to find a man standing on the threshold.

"Miss Marean!" he cried. "Well, what do you know about this! I didn't expect to find you still on the job."

His twinkling dark eyes awakened vague, far-away memories—a little boy with a freckled nose....

"I was driving up this way on a trip to the White Mountains," he said, "and I thought I'd swing off through the old town. I was going to hunt you up. But when I saw the door open, I had to stop and take a look in. Say"—he went to her with outstretched hand—"it's great to see you; but I bet you don't know who I am!"

"I do, too," Miss Malvina disputed. "Just you hold your horses a minute till I think."

She beamed into his face.

"You're little Joe Becker!" she burst out. "And you used to have to sit out in front where I could watch all your cutting-up."

"'Little Joe' is good," he told her. "Weighed myself this morning—two hundred and twenty-five pounds!"

"And you used to have such pindling legs," Miss Malvina recalled.

The visitor sat down on the platform at the old woman's feet.

"You kept me after school pretty often," he accused.

"And made you spat the erasers to get the chalk out," Miss Marean told him. "That warn't much of a punishment, though, after the way you used to act up—throwing spit balls and such mischief."

She patted his shoulder tenderly.

"I never once supposed you'd ever grow to be such a whopping big man," she said. "You was such a skinny little fellow. I'd lost all track of you, too. Where do you make your home, and what business are you in?"

"I live in New York," he told her; "and, well—I don't have to work much now. I've made quite a lot of money. Say!" he laughed. "I can see old Bill French up in the back seat wrestling with cube root, plain as day. What was the sense of cube root, anyway?"

"I don't know as I know myself," Miss Malvina admitted. "But 'twas kind of fun teaching it—getting the answers to come out right."

Becker gazed for a moment out over the desks in the schoolroom.

"Do you know whatever became of Sadie Davis?" he asked slowly.

"I've lost track of her, too," Miss Malvina answered. "She went off to work somewhere and never came back. Seems as if I've heard she was married. But it was so long ago I've 'most forgot. I suppose you're married and got a family, too?"

"Yep," Becker answered. "Two boys and a girl. Lord—but I wish I had sent them out here for you to teach. They've been to the most expensive schools in the country, all three of them; and they can't add a column of figures straight to save their souls."

"But I ain't teaching any more, Joe," Miss Malvina explained. "I'm only just sitting here. This school's been shut up going on five years. Let's see. I'm 'most seventy. I taught up to the time I was sixty-five—that makes it longer than I thought."

She chuckled and a twinkle came into her blue Yankee eyes.

"The school committee das'n't put me out," she confided. "Had to shut up the schoolhouse in order to get rid of me."

"I can't seem to remember the year we moved to Boston," Joe Becker said reminiscently. "I was only a little shaver."

Miss Malvina bent over the desk.

"I shouldn't wonder if the register is down in the bottom drawer. Maybe it's the one you're in."

**H**UNTING, she found a flat black book, and together they examined it.

In September, 1885, there was entered the name of Joseph T. Becker, aged thirteen.

"Look at all the tardy marks after your name," Miss Marcan pointed out. "You gave me considerable trouble, as I recollect it, Joe."

Her old eyes followed the faded handwriting upon the red-lined pages.

"Here's the Davis girl's name," she said. "She was eleven years old. I kind of suspicion you was pretty sweet on her, warn't you?"

The big man grinned, rose, went down the aisle, flung up a desk cover, and studied it for a moment.

"Come see this," he said.

Cut deep in the wood were the initials J. B. and S. D.

"Funny how I remember whittling them out with a jackknife," he said. "Just popped into my head like a flash."

An hour they talked, then the horn of Becker's car broke into frantic tooting. He went out to find children scampering away from the running board.

"They're Finn boys," Miss Malvina apologized from the doorway. "They've moved in over to the Hopkins place. There's a sight of Finn folks buying up farms around here now."

Becker looked at his watch, and at the sun.

"Don't you want to take a little ride down-town with me?" he asked. "I want to look around Main Street; but I ought to be over the New Hampshire line before dark."

Together they locked the door and Miss Malvina put the key in her pocket. When Becker helped her to the seat beside him she was so excited that she did not see him throw something into the back of the car and pull a rug over it.

**F**OR weeks Malvina Marcan talked and dreamed of Joe Becker's visit. He had promised to stop on his way back and bring his wife and daughter. But the July weeks sped away, August came and went, and no second visit from him broke the monotony of Miss Malvina's days. She didn't return to the schoolhouse all summer. The great key lay untouched inside the kitchen clock.

Rocking on the porch one afternoon, she saw the three selectmen drive up and look into the windows of Number Nine—and she was thrown into a panic of fear! They did not come up to ask her for the key, but the purpose of their visit continued to worry her. It would be just like Hiram Morse to want to turn the useless building into money.

"Hiram's terrible tight," Miss Malvina told Mary Emma. "I bet anything he's up to something like that."

Labor Day was close at hand; and on the Tuesday after, schools would reopen and the barge would begin to go back and forth with its load of shouting children. The longing to reach again began to torment Miss Malvina. She dreamed of writing out twenty words of a spelling lesson on the blackboard and of hearing history classes. A foolish phrase repeated itself over and over in her mind: "The climate of Uruguay is extreme and dry." She could not seem to get rid of it.

"If you'll get me a little mite of milk toast and a cup of tea along about noon," she told Sam's wife, "I'll just lay abed. One of my legs kind of pains me."

When Mary Emma had gone downstairs, Miss Malvina pulled the patchwork quilt over a guilty head.

"I'm an old fool and a liar!" she said. "I'm just as well as I ever was; and here I am worrying Mary Emma and Sam, letting them think I'm sick. All the matter is—I want to teach school this fall, and I can't."

In her south room she did not see what

Mary Emma, at the north window, witnessed with astonishment on the afternoon of Labor Day—a great number of automobiles around the old schoolhouse! Little cars and big ones, the depot bus, a horse and buggy hitched incongruously in their midst.

She heard, though, a knocking at the front door and a man's voice speaking her name. The voice had a familiar sound.

They pressed forward

In a moment Mary Emma came tearing up the stairs and rushed, bright-eyed, into the room.

"Aunt Malvina!" she cried, "you're wanted! Do you feel well enough to get up and take a little ride. Wear your new dress. That Mr. Becker who was here a while ago has come back. And he's got some car, believe me!"

**M**ISS MALVINA hurried into her Sunday clothes, smoothed her thin gray hair and nervously took out a clean handkerchief. Then excitedly she went downstairs.

Joe Becker rose from a porch chair to greet her.

"Brought my wife to see you," he said. "She's out in the machine. Won't you come for a little ride with us?"

A chauffeur and a woman in a white gown were in the automobile at the gate.

The woman put out both hands to her. "Joe's talked so much about you I feel as if I had known you always," she said. "This is such lovely country. I've never seen anything more beautiful anywhere than these hill-top villages with their white steeples. And I simply adore these elm trees. I come from the prairie states, and all this greenness just gets me!"

Miss Malvina was so flustered that she

and stopped—she could not go on. They pressed forward to shake hands, her old pupils of the years that were gone. "Lucy Mann!" she recognized a woman with gray hair. "You ain't changed one particle. You look just the same as you did when you was a girl."

Lucy kissed her.

"It's you who haven't changed," she said. "There never was a teacher like you

"That was easy enough," Joseph T. Becker, millionaire manufacturer, president of Becker and Company, answered her. "I took along the register when I was here in June."

HE DID not add that he had put three men at work tracing down every name—and that no one but himself knew the money it had cost to stage that reunion.

to shake hands, her old pupils of the years that were gone

did not even notice which way they were going, until the machine stopped in front of the schoolhouse. She looked out then, and saw the long rows of cars parked beside the roadway.

"What's going on?" she cried. "Must be they have sold Number Nine!"

"Just you come in and see what's going on," Joe Becker told her.

He helped her out, keeping his arm about her as he led her to the old door-stone and up into the entry to the school-room. And there, crowding the aisles and seats, were fifty or sixty men and women, no longer young—prosperous people, common everyday folk, a man who had been the governor of a state, and a man who kept books for twenty dollars a week. On Miss Malvina's desk were piled letters and telegrams. A great bunch of American Beauty roses greeted her misting eyes.

"Why, what—" said Miss Malvina,

in the world; and I don't believe there ever will be again."

THERE came then to greet her a tall woman with a bird of paradise on her hat and a skirt which was very short. Her face was rouged, her hair bright with henna. Jet pendants dangled from her ears. Watching, Joe Becker found out what had become of Sadie Davis.

One by one they reported. . . . Lewis Hallock lived in Chicago. . . . Jessie Joslin had never married. . . . Mary Briggs had six children. . . . Sam, her brother, was dead—he was a great surgeon.

"Always was doctoring animals," Miss Malvina remembered.

The Hartwell boys were out in California. They had sent a telegram.

"I don't see for the life of me how you ever found them all, Joe!" she said. "They've scattered so, and live so fur off."

It was he that presented the loving cup her pupils had bought, a shining thing from a famous Fifth Avenue shop. "Malvina Marean" was engraved upon its side, with an inscription beneath which cut itself deep into Miss Malvina's heart, making it bleed a bit.

When they called upon her for a speech and she stood up behind the battered desk—her thin hands grasping the silver cup, their blue veins puffed and swollen with the years, her gaunt old figure trembling—the crowded room became suddenly very still. The rouged face of Sadie Davis softened to tenderness, Joe Becker's eyes were full of tears.

But Miss Malvina could not talk. Words would not come. A moment or two she stood looking down at the men and women upon the school benches. Then she bowed her silvery head and shut her eyes. As she had (Continued on page 159)

# Experiences Of An Ambulance Surgeon

Stories of how people behave when hurt or sick, including examples of rare bravery, queer exaggerations, and strange delusions—When and how to send in calls for an ambulance, and what you should do in case of injuries when no ambulance or doctor is available—Human nature as seen by one who has answered as many as two hundred ambulance calls in a single month

*By Dr. W. A. Chipman*

Of the Staff of Bellevue Hospital, New York

**R**ECENTLY, while serving as an ambulance surgeon at Bellevue Hospital in New York, I was called out at two o'clock in the morning to attend the case of a man who had been struck down by a trolley car on the lower East Side. When I arrived at the scene of the accident I found the man sitting in a doorway and leaning for support against the casing.

While I was making my examination, the man himself and two friends with him assured me that he had been badly hurt, and they spoke of the big amount of damages he ought to get from the trolley company. Nevertheless, I could find nothing wrong with him except a mere scratch on his thigh and a three-cornered tear in his trousers.

Finally I told the man that his imagination and his friends must have made him think he was hurt a great deal worse than he really was, and that the best thing he could do was to get up and go home.

"Aren't you going to sew up the cut on my leg?" he asked.

"There isn't any cut," I told him. "It's only a break in the skin. A cat could give you a worse scratch than that."

Getting to his feet, the man shook himself and seemed surprised that he was able to stand. "It's certainly one on me," he said. "I thought I was a case for the hospital, sure." Then, as he sized up the real extent of his damage, he exclaimed, "Great heavens! That's a pretty bad tear in my trousers, anyhow! Doctor, as long as you're here, would you mind sewing that up?"

I take it that by this time the patient was able to see the humor in the situation, but as I was then on twenty-four-hour duty and had been answering calls all day and most of the night, it was not quite as

funny to me as it might have been. I have found that a good many people are like this man in exaggerating the extent of their injuries after their friends have told them they ought to collect damages.

The trivial cases on which an ambulance surgeon is called out are most likely to come in between the hour of midnight and early morning. Sometimes these are cases of people who have only a stomach

Headquarters that he needed an ambulance right away. I responded to the summons, going to the home of a man who was in pretty good circumstances. He told me that he was suffering from a terrible pain that was shooting up and down his right leg; that his leg felt hot and swollen; that the pain seemed to be spreading over his whole body.

I asked him to indicate just exactly where the pain was, and from the indications he gave I could see that the pain did not run along any nerves. His vagueness made me suspect the real nature of the man's trouble; so I told him that his leg was in perfectly normal condition and that he ought to get his imagination under better control.

"Now don't say that, Doctor," he urged. "Anyhow, give me a little something to help me get my imagination under control. A small drink of whisky would help a lot. These are awfully trying times on a man who has got a pain like mine."

I had to tell the patient that I was not permitted to administer the treatment he desired. In a good many instances people who have adopted ruses of this kind in an attempt to defeat the eighteenth amendment have been doomed to

disappointment, because alcohol is not one of the remedies included in the equipment of our ambulances. One man sent in three calls for imaginary ills of this kind in as many days and, in the end, to keep him from monopolizing the service, he had to be confined in a city institution.

As an ambulance surgeon I have gone out on as many as 203 emergency calls in a single month. In one day I have responded to as many as 20 calls, and have traveled more than 75 miles in going after and bringing patients to the hospital—people with broken legs or arms, frac-

PHOTO BY EDWIN SAUND.

Dr. W. A. Chipman, who joined the staff of Bellevue Hospital, New York, after graduation from Harvard Medical School in 1921, is shown in his regular place when going out with the ambulance. "Riding the bus" is part of the city hospital training of every young surgeon. In the accompanying article Doctor Chipman gives a vivid account of what he learned about human nature from this experience, together with many practical hints for all of us

ache and who, owing to the tendency to exaggerate the pains that come on during the small hours, think they are mortally ill. Generally, all that these people need is a doctor to reassure them—or at most a cathartic. In a good many instances too, people send in for an ambulance after midnight because after that hour most practicing physicians charge an extra fee. Recently we have had quite a number of trivial after-midnight cases of a peculiar variety.

A few weeks ago, at three o'clock in the morning, a man telephoned to Police

tured skulls, bad gashes in their limbs or bodies, and others who have been taken dangerously ill with pneumonia, or diseases of the intestines, heart, or chest.

"Riding the ambulance" is a duty required of every graduate in medicine who joins the staff of a big city hospital, and is really a great experience in the training school of human nature. It brings one in touch with all kinds of people, the poor and the well-to-do, the sincere and the insincere, people who appreciate what you do for them and some who don't. I have seen some who were only slightly hurt take on as though they were in terrible suffering, while others, who were really badly off, have smiled bravely through real agony.

**PEOPLE** sometimes ask me whether men or women bear pain more bravely. I have found that men as a rule are more likely to make light of small injuries, while women are more likely to be upset by them; but when it comes to enduring real pain some of the bravest cases I have seen have occurred among old people and children.

Recently, an Italian woman seventy years old, on stepping out from behind a pillar of the Third Avenue elevated line, was struck down by a heavy truck. The wheels ran over her legs and broke them both above the knee. But she neither screamed nor fainted, and later I was told that, even as she was picked up from the street and carried into a drug store to await the arrival of the ambulance, she began to pray softly.

An examination disclosed that the bone of one of the fractures was all but protruding through the flesh. Nevertheless, the patient uttered never a sound of complaint when she was lifted from a chair

PHOTO BY HADON BROS.

The man on the stretcher was injured when crossing the street in front of a truck. In this case, as seldom happens, the surgeon had a chance to attend his patient without being more or less impeded by a big throng of spectators. Altogether in New York there are 107 ambulances in continuous operation. They are manned by 350 surgeons, and in a year's time respond to more than 111,000 calls

to the stretcher. Then it was necessary to "immobilize" the fracture so that she could be transported to the hospital where her legs could be set with the aid of anesthetics and the X-ray.

While this was being done she had to be held firmly by the shoulders by two men. Bandages were fastened around her ankles, and by means of these her legs were stretched until the broken bones were

somewhere near together again. Then her legs were bound in Thomas splints to hold them in position.

This work was necessarily very painful, especially when the splintered surfaces of bone grated upon each other. Yet the woman made no protest. Once she moaned slightly, but when a policeman said kindly, "Never mind, Mother. It's all right, Mother!" she actually looked up into his face and smiled. On the way to the hospital, while the ambulance was passing over rough cobbles, she raised her voice just once. It seemed that she had some complaint to make; but actually all she had said was, "Doctor, Doctor, what hospital are you taking me to?"

**ANOTHER** case which I think showed the qualities of real bravery was that of a little Irish lad. Running barefooted, he had stepped on the rough edge of a broken bottle, and had cut a deep gash in his foot. In sewing this up, it was impossible to use even local anesthetics, and when the first stitch was taken the boy cried loudly and struggled to get (Continued on page 169)

PHOTO BY HADON BROS.

The ambulance in the picture above was called to take to the hospital a woman who had scalded herself in the kitchen of her home on the lower East Side. The picture at the right gives a glimpse of "olden times" and shows that "public interest" in the work of the ambulance surgeon was just as keen in the days of horse-drawn vehicles as it is now. To-day all ambulances in New York are motor-driven, and when out on calls make from twenty-five to thirty miles an hour. When the horse was in use the lapse of half an hour was not unusual before the arrival of an ambulance. Now one can be there within twelve minutes at most, and generally within four or five

She wondered, as time slipped by, just what would happen

## A Mother Who

*By Linda*

ILLUSTRATION BY

**T**HERE was great excitement in the Matthews household. They usually got up early, that is, Mollie did. But this morning the children—Jimmie, Frances, Charlie, Mary, and even Baby Ruth—were all up long before daylight. In fact, they woke Mollie up, so that she arose a full hour earlier than usual, although she had been in bed such a short time.

Now, the cause of the excitement was that it was circus day, and for the first time in their lives the Matthews children were going. Though Jimmie, the eldest, was thirteen, he had never been to a circus or anything else, because there was never money with which to go.

There had been no money for things even when Jim Matthews was alive. And after he was gone Mollie found it so desperately hard to feed five hungry mouths and clothe five small bodies, to say nothing of her own, besides paying Jim's funeral and doctor's bills bit by bit, that each year she had had to promise the children that next year— And the

next year she had had to swallow hard at the disappointed, wistful little faces and promise them that if they would just wait until next year—

And they had waited so bravely and uncomplainingly, trying hard not to let her see their disappointment, that the last time she had resolved she would not disappoint them again, no matter what happened.

So when the gorgeous posters went up on the billboards, she promised the children that this time they should go to the circus, and she meant to keep that

promise. But it was not going to be easy. It was true that all of Jim's bills had been finally paid, in drops of blood it seemed to her; but the cost of living had steadily risen and the children had steadily grown, requiring more to eat, more to cover their bodies, more books and requisites at school. So that the day before circus day found Mollie with just two dimes in the house, and a few dollars due from Mrs. Renfro for sewing.

It would take all Mrs. Renfro owed her to take the children to the circus, and that did not mean there would be any-

to provide the six circus tickets, just what *could* happen

# Wouldn't Give Up

*Buntyn Willie*

WM. MEADE PRINCE

thing to spend for peanuts, balloons, and such things. They would just get inside the big tent, and that was all. But Mollie told herself that would be enough.

She shut her eyes to the fact that no more money was in sight; and if she spent the Renfro money for the circus—But she was going to spend it, that was all. She was going to keep her promise, renewed so many times, to her children. And surely they would not have to go hungry because she did it. There would be a way provided. She'd manage somehow. But, sometimes, when she wondered

just *how* she was going to manage, she grew so afraid she almost wavered in her determination. But then the sight of her children's eager faces and their never-ending talk of the wonders they were to see stiffened her. She would find some way. Her children should not be disappointed again.

**A**FRAID lest there might be some mistake about the money for the circus tickets, she telephoned Mrs. Renfro the day before that she would deliver the sewing early the next morning, and asked

her to have the money ready, explaining just why she wanted it. Then she sat up half the night finishing the work.

After a scanty breakfast, which the children were too excited to eat, Mollie got ready to take the sewing home. She would not send it by Jimmie or Frances, as she usually did, because she had, after much anxious thought, decided to raise her prices a little. She knew that she sewed far more cheaply than anybody else, but she had been afraid to charge more—afraid of losing her customers. Now, however, her need was so urgent it gave her a desperate courage. She told herself that if she raised just a little, and Mrs. Renfro paid it, it would mean a little margin, not much, but enough to give her a chance.

Admonishing the children to clean up the house while she was gone, and to wash and dress each other, she set out. All the way she thought about that little raise in price. What would Mrs. Renfro say? Would she pay it without protest? If she did—Mollie drew a long breath. But

if she didn't— Mollie plodded on worriedly, shifting the heavy bundle from one arm to the other.

At the big, handsome Renfro home, a maid came to the door.

"Mrs. Renfro is expecting me," Mollie told the girl. "I 'phoned her yesterday I'd be here early this morning."

The girl, who knew Mollie and her errands there, shook her head kindly. "I'm sorry, but Mrs. Renfro is out of town. She left last night."

Mollie stared at the maid in utter consternation. "But—but—" she stammered. Then, suddenly, a wave of hope and relief swept over her. Mrs. Renfro had, of course, left the money for her!

SHE handed the bundle to the girl. "It's her sewing," she explained. "I guess she left the money for it?"

"No," the maid shook her head again. "She didn't leave it with me."

"But—but—" Mollie stammered again. "She promised—"

"She left in such a hurry, I guess she forgot it," the maid said kindly. "She got a telegram that her mother was sick, and she had to run for the train."

Mollie stood stunned.

"But she might have told Mr. Renfro about it," the girl added. "I heard her telling him a lot of things to attend to. I didn't hear her mention the sewing, but she might have told him. I can telephone him about it, if you want me to."

"No," Mollie caught her breath in passionate relief. "No; I'll go up to his office. I guess she did tell him about it, as she promised me she wouldn't forget it. Just keep the sewing, it will be all right."

Mollie started up-town to Mr. Renfro's office, walking fast. It was a long way and she had no car fare. She'd get the money, she told herself, even if Mrs. Renfro hadn't told her husband about it. He'd take her word for it, she knew. He'd have to. *Her children were not going to be disappointed!*

Mollie found nobody in Mr. Renfro's office but his stenographer.

"Mr. Renfro went hunting early this morning," the girl said when Mollie asked for him.

Mollie caught at the door facing. *Mr. Renfro gone, too!* Then she steadied herself. But he might have left the money for her.

"Did he leave anything for Mrs. Matthews?" she asked the girl.

"Why, no; he didn't leave anything but a note on my desk saying he was going hunting. He didn't even say where he was going or when he would be back. I'm sorry," she added as she saw Mollie's face. "Was it anything I could attend to?"

"No," Mollie said dully, and went out of the office and slowly homeward.

For the first few blocks she walked in a daze. Then her mind began to function. It looked as though she was beaten. But she would not give up yet. She would not tell the children now. She would take them on to the parade, and perhaps, before time for the circus, she could think of something, see some way out. She had no clear idea what, but surely there was a way. Surely, when you did your best—

At home she found Jimmie finishing the dishes and Frances vigorously scrubbing Charlie, who, for a wonder, was not howling a protest. Mary and Baby Ruth were already dressed and were sitting very straight and very still on chairs in the little front room. Mollie stopped and patted their small eager faces, while a hard lump came into her throat.

"Did you get the money all right, Ma?" Jimmie asked as Mollie entered the kitchen. She turned and went out hurriedly, pretending not to hear him.

She took the children to the parade and let them stand so near the line of march they could almost touch the fairy floats, gayly caparisoned horses and animal cages as they passed. She did not see the parade herself. She saw only her children's faces, rapt, eager, shining with happiness at the unbelievable wonders they saw, at the unbelievable wonders they were to see. How happy they were! Mollie choked. How happy they were! But, when she told them they could not go to the circus—

She put her hand suddenly on Jimmie's shoulder, for he had been disappointed more times than the others and she knew that soon he would be too old to feel the allure, to see the things under the big tent as they ought to be seen, as only childhood can see them.

Jimmie reached up and patted her hand, turning up to her his wistful, freckled face. "Ma, it just don't seem we are actually going to see it *all*, does it?" He drew a long breath. "Gee! Won't I have something to tell the kids that don't get to go?"

AFTER the parade Mollie took the children home. She cooked a hasty lunch and put it on the table. She could not eat anything and, while the children were eating, she went into the bedroom and sat down.

She had not thought of a way out. She had not thought of anything. Was she going to have to give up? Was she going to have to tell the children now that they couldn't go? She suddenly put her head down on the side of the hard little bed. Was there no way even when one did one's best? She sat there a long time praying, though she did not know she was praying.

Surely, when one did one's best— She raised her head and looked upward. Surely, then one could not fail utterly! If one could fail, then where was justice? Where was God?

Where were they? She stood up stanchly. Where were they? Why, Justice reigned, of course. And God was in His heaven, and He had promised all His little children who did their best and trusted Him— She had done her best, and she would trust Him to the end, and she knew that He would not fail her.

She went back out to the kitchen with a new straightness to her tired shoulders and a new light in her eyes. Her children were not going to be disappointed. God would provide a way.

She got the five small faces and five pairs of hands clean again. Then, with the two dimes tied in the corner of her handkerchief, they set out for the circus grounds. They started early, for it was a long way and car fare was out of the question.

Jimmie walked on one side of Mollie and Frances on the other. The three smaller children trotted along in front, and they did not fret at the long blocks they had to traverse or the rough, steep hills they had to climb.

Mollie went along, wondering at herself. Only two dimes in the corner of her handkerchief and six circus tickets to buy. Yet she was not afraid. She had a feeling of calmness and peace unusual to her.

"Ma, did you ever go to a circus when you was a kid?" Charlie dropped back to ask her.

Mollie shook her head. There had been no money in her family for circuses either, and she had never gone to one. She smiled a little now as she remembered how she hid her hurt by pretending that she did not want to go, that ladies did not go to such places.

When they came to the edge of the circus grounds, Mollie called the children back to her. But she had difficulty in holding them.

Charlie wanted to go in the big tent at once to see the animals. But Mollie shook her head. "No; we'll see what's to be seen out here first," she said. "We've got plenty of time."

"But hadn't I better get the tickets now, Ma," Jimmie urged anxiously, "so we'll be sure to get in?"

Mollie shook her head again, keeping her eyes away from her boy. "Not yet, son. There's no hurry. Let's go over and see the man walk the rope."

They made the round of the circus grounds, seeing all there was to be seen free. That is, the children saw and gasped with delight at everything. But Mollie saw nothing except her children's eager, happy faces, felt nothing but the two dimes held tightly in her hand. She wondered, as time slipped by, just what would happen to provide the six circus tickets, just what *could* happen. After a while Doubt, small and insidious, tried to creep in. But she shut him out quickly.

"No," she said doggedly, "no; God won't let my children be disappointed when I've done my best. I know He won't."

When they had made the rounds and Mollie was thinking what to do to hold the children, Jimmie grew anxious:

"Ma, everybody's going in. Can't we go now? We've seen everything out here."

"No," Mollie said hurriedly. "It's too early yet. We'd get tired sitting still so long. Let's stroll around a little longer."

SO THEY started the rounds the second time. The children were quieter now and, instead of looking again at things they had already seen, they watched the entrance to the big tent eagerly.

"Gee! Ma, if we don't hurry up, we won't have time to see the animals," Charlie fretted. "And Ruth wants to see the monkeys. They've got a little baby monkey."

"I want to see the baby monkey," Ruth said.

Mollie looked around her desperately for something to quiet them just a little longer, until the thing could happen. "For it will happen," she told herself doggedly. "It's got (Continued on page 164)"

# The Luck of Being Lame

By William Johnston

**W**HEN people say to me, "Don't you find being lame a terrible handicap?" I can truthfully answer, "There's a lot of luck in being lame, if you only know how to look at it."

I will admit, however, that just after it had happened, when I had had months of pain and had spent weeks in the surgeons' hands, and was finally able to be up and move about a little on crutches, the prospect was appalling. It was a tremendous shock when the doctor, after a careful examination, said: "You never will be able to walk without a brace."

My amusements, like those of most Americans, had required the use of two good legs. I had ridden horseback, played tennis, and was fond of fishing and travel. In my hours of recreation I had been accustomed to bowl, to play pool and billiards. The doctor's verdict seemed to sound the death-knell for most of my physical pastimes. It made me miserable to realize that I should have to get along without the games and exercises that make life interesting and keep the body fit. All the time I was waiting for the arrival of the brace which had been ordered, I was disconsolate.

Then the brace arrived—a great, clumsy contrivance of leather and steel that weighed seventeen pounds. I tried it on—once. Then and there I learned the first lesson that lameness brings.

Horror-stricken at the prospect of having to drag around a seventeen-pound fetter for the rest of my natural life, I set my jaw and brought into action a strength of resolution which hitherto I did not know I had. "I'm going to learn to walk without a brace," I said.

"I am afraid it's impossible," warned the doctor.

"I'll do it," I said.

That was the first great discovery that my lameness had brought to me: *A handicap strengthens the character.*

Up to that time, most of my acquaintances would have described me as a man of easy-going disposition. I had been going through life taking things for granted, using eyes, teeth, arms, legs, and stomach as if they were going to last forever, and I had paid little attention to the proper care of them. But now I found my viewpoint and sense of values changed.

It had been easy enough to say, "I'll walk without a brace," but doing it was a much more difficult matter. There came days of aching effort, and of utter despondency, times when temptation was strong to give up and say, "What if I do have to go on crutches the rest of my life? There are lots of other men in the same boat."

Yet, somehow, the lameness itself had put new vigor into easy-going me. Day after day I persisted, and persistence won.

Mr. Johnston is not only one of the best known and most popular newspaper men in New York City, but he is also the author of seven novels, at least one of which has been high up in the ranks of best sellers. He is also in great demand as an after-dinner speaker. Despite the physical handicap with which he deals in this article, Mr. Johnston is a sportsman and traveler with a range of experiences approached by but few of us. He has fished in Newfoundland, climbed and snapshotted many of the mountains of North America, gathered sponges in Cuba, and watched prominent sporting events in widely scattered cities. In addition to his other activities, he holds a prominent editorial position with the New York "World"

For years now, nearly ten years, I have been walking, walking without a brace, without crutches, often without even a cane, walking, not gracefully perhaps, but at least serviceably enough to do practically everything I wish to do, climbing subway steps to go to business, getting on and off trains to travel across the continent, going fishing in the mountains. Lameness, I have discovered, doesn't prevent you from doing what you want to, unless you let it.

The compensation for lameness seems to be a strength of purpose that accomplishes what often seems at first impossible. This is not an individual experience of mine. I have often observed it in other lame men. There was my friend McDougall Pallen, for example, with one leg off above the knee. He was forced to wear an artificial limb, but when America entered the Great War he was determined to get across and do his bit.

"But it's hopeless for you," everybody

told him, "to attempt to go over there in your crippled condition. Only sound men are wanted. What could you do, even if you got across?"

"I can show the chaps that get their legs shot off that they needn't be discouraged about it," answered Pallen.

In the uniform of a Knights of Columbus secretary, Pallen finally went to France, and by dancing merry jigs with his wooden leg beside hospital beds brought new hope and courage to many a wounded soldier.

Almost the first day that I walked out without my crutches, I learned the second lesson that lameness teaches: *A handicap reveals the kind side of other people.*

A hale, husky chap, with a perfect physical frame, goes through life seldom experiencing and never suspecting the depths of kindness that exist in every human heart. Let a man get crippled, and at once he begins to make wonderful discoveries about people.

There was a traffic policeman at a certain corner whom I had frequently seen before my mishap. He had always seemed gruff, ill-tempered, disobliging, a terror to offending automobilists and pedestrians. Never yet had I seen him exchanging a pleasant greeting with any passerby. But on this occasion, as I limply approached his crossing, up went his hand, stopping all traffic. He even came across the street to my assistance.

"Take your time," he cautioned me, a huskiness in his voice, "I know how it is. I've a little fellow at home like that."

Since then, hundreds of similar experiences have happened to me, and I know now that they do not happen to me alone. Ask any blind man or anyone else with a visible physical handicap, whether big cities are heartless. He will indignantly deny it, for he can tell you instance after instance of kindnesses done to him by utter strangers, by people of all ages and in all walks in life.

Hardly a day has passed since I became lame that some stranger has not offered to do me a kindness. If I stand in a crowded subway train clinging to a strap it is always from choice, not from necessity. Someone—a working man, schoolboy, or girl going home from business—always offers me a seat. Just as often as I cross a thronged thoroughfare, I see some stranger retard his step to keep a watchful eye out that I get across (Continued on page 166)

# It's Fine to Have Ideas—But

Various types of men you have to reckon with in attempting to  
of your own attitude toward

*By W. H.*

President of the Leffingwell-Ream

**Y**EARS ago, when I was a brand-new husband as well as a beginner in the science of management engineering, I found myself bubbling with enthusiasm over my recent discoveries of how lost motion was avoided in industry by means of time studies with a stop watch.

"Why, many of these ideas would fit my own household," I said to myself—and forthwith I blurted out to my wife that I proposed to make some such studies of her work. "It's clear to me," I added importantly, "that every day you're making hundreds, yes, thousands of unnecessary motions."

I wish you could have seen the look she gave me. It startled me so that I was about to rush into further explanation, when she remarked, calmly:

"Suppose, dear, that you confine your efficiency ideas to the office and let me run the house." And then, as a parting shot, "Have you forgotten about the lights in your dark room?"

Now, this was hitting me in a tender spot. Moreover, it was reviving a very unpleasant memory. That dark room, where I developed my camera plates, had been my pride. In order to keep it dark, I had constructed a nice "snake" entrance, through which one had to make two or three turns around partitions before one got into the room itself. Outside there was an electric push button, but inside I had no way of controlling the current—so that if I wanted to put the light out, or to change from the ordinary light to the ruby, I had to walk all the way out to the switch.

"I suppose, as an engineer, I should have thought of that," I complained one evening to my wife; "but I can still solve the problem by putting in a three-way switch."

"Aren't you wonderful," said my wife, so calmly that I knew something else was coming. "But before you go to the trou-

ble and expense of installing a three-way switch, why don't you try the perfectly simple method of partly unscrewing the bulb when you want to put the light out and screwing the bulb up again when you want to relight it?"

Yes, that was all I had to do—just lift my hand and give a slight turn. And it was this distressing incident that my wife had picked the unpsychological moment to recall. At least, it was unpsychological so far as my newest idea was concerned.

APRIL 1928  
William H. Leffingwell was born in Canada forty-seven years ago. Both his parents were Americans. Beginning office work at the age of seventeen, he held positions in Grand Rapids, Chicago, and New York, rising from stenographer to important executive duties. For four years, beginning in 1910, Mr. Leffingwell worked in Europe, organizing branch offices for American firms. In 1918 he organized the Leffingwell-Ream Company, of which he is president. He is author of "Scientific Office Management," and of numerous pamphlets and magazine articles dealing with industrial management. He also edited two books: "Making the Office Pay," and "The Automatic Letter Writer." His home is in Westfield, New Jersey.

Now, this idea of mine was all right. Later, it was proved so. My only fault was that I had taken a bad method of putting it across. I had tried to step into my wife's own domain and revolutionize it on my own hook, without due preliminary conferences with the commander-in-chief. Her rebuke was very proper.

Fortunately, the lesson went home. I didn't give up my plan of making her housework easier for her; but I decided to put my idea across by far more subtle tactics.

Never again did I refer to the subject directly. Instead, I took pains to keep her fully informed about the methods by which time and energy were saved in offices and industrial establishments—

and I left it to her to make her own applications.

It worked beautifully. For instance, I had noticed that the ironing was done with the clothes basket on the floor. Every time the ironer wanted a new piece she had to stoop over and pick it up out of the basket. I mentioned casually that a typist's desk is so arranged that she can reach everything with the minimum of exertion—and two or three days later I noticed that the ironing was being done

with the clothes basket on a chair within easy reach. Other similar ideas were "eased across," and to-day my wife can boast of a household run on scientific principles throughout, from budgeting to baking.

Don't jump at the conclusion that I claim the whole credit for this. Far from it. Mine was merely the preliminary suggestion. But the point I'm making is that by the indirect method, I got across a flock of ideas that probably would have fallen by the wayside otherwise.

The majority of us are working for someone else. If we are at all interested in our job we are likely to have ideas about how it should be handled, as well as other ideas about the business as a whole.

Perhaps some of these ideas—ones that we feel are perfectly good—have been frowned upon. But before we decide that our boss is a wall-eyed, fossil-minded old codger, let us consider whether we haven't had a faulty method of selling these ideas to him.

There is a practical but often neglected psychology of getting other people to cooperate with your ideas. It has been one of the biggest problems I have had in business for many years; and I am going to try to tell here some of the ways in which I have been able to meet it. There's nothing startling about the principles I have employed. They are simple enough—but I think that they do have the virtue of being applicable to every human being.

# Can You Put Them Over?

make changes—Read carefully and you may catch reflections the new ideas of others

*Leffingwell*

Company, Management Engineers

who finds difficulty in getting other people to do what he wants them to do, whether in his office, his home, his social club, or anywhere else. In other words, they are more or less of an antidote for that cold indifference, if not open hostility, that our suggestions to others so often meet.

Only the other day it behooved me to get one of the executives in a large firm to approve of a visible index, designed to save labor and reduce the chances of error in his department. I hadn't put this particular idea up to him, but I had found from the beginning of my dealings with his firm that he would hear absolutely nothing of suggestions for changes. His attitude was in sharp contrast to that of the other executives.

In encountering opposition, my first rule is to try to figure out dispassionately just what lies behind it. I do this by trying to put myself in the other fellow's place—to get his viewpoint and the motives behind it. In this case I knew that my man was friendly enough to me personally. Moreover, far from being opposed to new things on general principles, he was inclined to take a rather lively interest in them. Hence the only conclusion I could reach was that he was of that numerous type who shut themselves off from the direct suggestions of others because of an egotistic desire to be the "whole thing."

STRATEGY, therefore, being called for, I went to see him with the index tucked under my arm and bearing in my hand some papers relating to other matters about which I professed to be in need of his opinion. While we were discussing these matters, I once or twice shifted the index from under one arm to the other, and at length he "bit."

"What is that you are carrying?" he asked me.

"Oh, that?" I replied carelessly. "It's only a visible index."

"Let me see it for a moment."

"Oh, you don't want to see that," I said, as I arose to go. "It's for another department. You don't need it in yours."

"Anyway," said he, "I'd like to see it."

With a show of reluctance I handed it to him, and as he looked it over I explained its workings in a casual but none the less thorough way.

"Don't want it in my department!" he finally exclaimed. "The deuce I don't. Why, that's the very thing I have been looking for!"

Of course there was nothing original in this scheme whereby I eased my idea over into the other fellow's head in such a way as to let it come out as his own; it is what salesmen call letting the prospective cus-

tomers "hook" himself. However, there is reason to believe that when it comes to selling *ideas*, many men are kept from resorting to this plan by not being willing to subordinate their ego to the other fellow's and letting him have the credit. To all such I would recommend the example of that great engineer-executive, Frederick W. Taylor, who always saw that his *real* purpose was not to win credit for himself *but to get things done*, and who, by making it easy for his associates to think that the boldly original ideas he instilled in them were their own, was pretty sure to accomplish his purpose with the minimum of friction. And just as the net result was to give Taylor the very valuable reputation of being a man of influence, so this ultimately must be the reward of everyone who follows this course whenever it is practicable.

SEVERAL years ago, at the outset of my engagement with a firm, I discovered an improvement so obviously needed in one of its departments that I reported on it at once. As it turned out, the improvement was instantly perceptible to everybody, and the result was that the head of the department was jocularly roasted by his associates for requiring the services of a management engineer to point it out. As a matter of fact, every man is likely to overlook things connected with his work by reason of his very closeness to it; but the inquiries of this executive's associates as to whether he was asleep so wrought on his mind as to develop in him an opposition to my work in general. I had a tough time overcoming this opposition, and the incident taught me that when dealing with things which a man plainly ought to see, it is wise to call his attention to them in a way that will permit him to make the correction himself. Always we have to consider that when we suggest to a man a new way of doing his work, the implication is that there is something wrong with his old way, and that no man greets such a message with three cheers.

In going over with the superintendent of a certain establishment the report I had prepared on the general conditions existing there, he objected again and again that I was "picking on" him in mentioning this or that condition which was possible of improvement. Indeed, he went so far as to declare that if what I reported was true, his proper course was to resign. Vainly I pointed out that there never was a business in which possibilities of improvement did not exist, and that, since I had the advantage of the *outsider's* perspective, there was nothing disgraceful to him in having failed to see these possibilities himself. While in extreme cases like this it seems impossible to avoid giving

offense, it does not alter the fact that, in advancing our new ideas, the feelings of those who are hit by them have to be considered, and that the tactful "Don't you think?" is usually far more effective than the blunt, "I think."

Sometimes, however, a man is so wrapped up in his own thoughts and ideas that you can get yours through to his consciousness only by a good round blast of self-assertion. In dealing with a difficult customer of this kind, my general method is this: Suddenly pausing, I raise my voice and fairly hurl at him the question: "Do you agree with that last statement I made?" Thus jumped out of his reverie, he is likely to ask you to repeat; and then it is up to you to make such an incisive and emphatic presentation of your proposition as will keep him from reerecting his mental barrier.

While one must not "play up to" his own ideas in too important a fashion, it is equally dangerous to refer to them in a careless or semi-humorous tone. Once I was associated in a large task with a construction engineer who decided to illustrate his well-designed plan with a graphic chart; and, in order to call attention to the principal change he proposed, he colored that portion of his blue print with red crayon. During his explanations in the conference-room he invariably referred to that portion as "this pink stuff." "Now, this pink stuff," he would remark, "will do so and so." Finishing his exposition, he had the mortification of finding that all the executives followed his lead, and, with increasing sarcasm, called his work the "pink stuff."

At length someone asked: "What will this pink stuff cost?" "Ninety thousand dollars," the engineer replied. Then, from the chairman: "Well, gentlemen, do we want to pay ninety thousand dollars for this pink stuff?" And back came the unanimous answer: "No, sir; we do not."

I KNEW of another engineer who was called on to design a directors' room. So numerous were the directors of this corporation that it was impossible to seat them all with comfort at the usual long table. Hence the engineer planned a rising tier of seats, with a small table for the chairman at the center. This he loosely called the "House of Lords" plan; and while his idea might not have been adopted anyway, the term he applied to it certainly greased its way to the chutes. For the fact was that those directors often had been accused of acting in a high and haughty way, and they could not afford to take any chances on having it noised around that they were purloining even the architectural stuff of England's upper chamber. # Animals Have Queer Streaks— As Well as Folks

True stories from the Zoo

An interview with Raymond L. Ditmars, Curator of Reptiles,  
in charge of mammals, New York Zoölogical Park

*As Reported by M. K. Wisehart*

**D**URING the past twenty years I have made more than ten thousand still pictures and more than a million feet of moving pictures of all kinds of animals. At times I have been through some pretty trying ordeals, but the narrowest escape I ever had from serious injury—possibly from death—was a few years ago at the New York Zoölogical Park when my subject was a very clever chimpanzee, Suzette.

Suzette had a "queer streak," and, as things turned out, the keeper's knowledge of her peculiarity was a very fortunate thing for me. She had formerly been a prominent actor in an animal show; but, having advanced in age, she had become subject to terrible fits of temper, so that her owner was glad to part with her. Immediately after she came to us I began cultivating her acquaintance, but did not begin work with her until I thought she was disposed to be "chums" with me.

The film I wanted to get on this particular day was to show Suzette at the breakfast table doing with facility almost anything a human being would do under similar circumstances, and particularly I wanted to make a record of the nimbleness of her fingers as she folded and unfolded her newspaper, pretending to read. Before I began recording the scene, the keeper left the cage, leaving me alone.

Suddenly, when the picture was almost finished, something strange came over Suzette. Rolling up her newspaper, she used it like a club, pounding on the table. Then she threw the paper into a corner, got up, knocked over her table and hurled a chair to one side.

"Now come, Suzette," I said quietly, thinking to calm her. "This isn't the way to do. Everything's all right. You don't want to make a fuss."

But my words seemed only to enrage her more. She leaped into the air, let out a cry half between a whimper and a

Dr. Raymond L. Ditmars, authority on mammals and reptiles, is holding Mitol, an orang-utan, three years old, who showed herself to be remarkably quick at imitating. One day, having seen a keeper mopping the floor, she took the mop herself, wrung it out and mopped the floor. Then she washed her hands and dried them on a paper towel, as she had seen the keeper do. Toto, in the circle, is an expert manager. In eating an egg he breaks the shell by cracking it on his head, enjoying from one egg both "shampoo" and "eggnog." This time he was afraid another monkey was coming to share his egg. Working fast, he splashed it over his face

scream, and then began what is known as the chimpanzee dance.

Walking upon hind feet, a chimpanzee will circle with heavy, tramping, sidewise steps around the object of its wrath and, finally, leaping all of a yard in the air, will let out a piercing scream, rush upon the victim, slap him with hands powerful enough to bowl him over, and claw and bite his face, and perhaps break his bones. This, I saw, was the medicine my chum Suzette had in store for me.

Round and round she went, effectually cutting off my retreat to the door. Twice I moved in that direction, but each

time she intervened. Meanwhile, I dared not call the keeper for fear my cry would further excite Suzette. Instead, I tried to soothe her with quiet words, but again she was infuriated, and seemed to be gathering herself for the final leap.

Just then the keeper, who had heard Suzette's first outbreak, came running toward the cage. I saw that he had sized the situation up correctly, for on his way he stooped to pick up something from a pile of "properties" that were scattered about outside the cage. Then he came straight toward us, calling:

"Suzette! Suzette!"

At this cry, the chimpanzee took her eyes off me and glared at the keeper. And she saw that he was advancing with that something in his hand leveled straight at her. She hesitated, weakened, dropped down on all fours, and then retreated to a corner, where she cringed in fear.

What did the keeper have in his hand? Nothing but an old broken toy pistol about four inches long—a little cast-iron thing that at some time had cost ten cents!

When people ask me if animals have many human-like traits, I sometimes tell this incident, for it seems to me that in her fear of the toy pistol, Suzette was very human. At some time in her career a revolver had been fired off very near her.

This picture shows an event in the education of a baby chimpanzee. When small monkeys are first shown their reflections in a mirror they often dash at the glass and then quickly rush around behind it to grab the other monkey they think is there! This chimpanzee seemed to realize from the first that what she saw was only a reflection

unexpectedly. That experience had left her in mortal terror of anything resembling a firearm. You may have known people, who, either through some personal experience or through reading of accidents with firearms, have come to be so much afraid of them that they show signs of real nervousness when even a toy gun is pointed in their direction. I myself have known of people who were liable to hysteria even, if the perpetrator of a joke of this kind refused to desist.

We are all interested in seeing how much animals are like human beings, and on this subject I sometimes refer people to my wife, for she went through an experience once that really makes her an authority. She will tell that, so far as the mischief-loving streak in them is concerned, monkeys are not only human but "superhuman"—the mischief-making geniuses of the world.

A YEAR ago we had in our home a macaque and a pigtail monkey, both of which we had raised from the time they were no bigger than your hand. They had grown to be eighteen inches in height, had their canine teeth, and were getting so strong that we saw that we should soon have to graduate them from our society and into their new world, the Zoo. Though we hated to part with them, we had nevertheless set a date when they should leave us.

A week before that day came, it happened that all the members of my family and all the servants went out for the afternoon, the two monkeys having been left in their glass house in the sun-room. Toward evening, when my daughter returned home for a wrap, she was startled, as she put her hand on the handle of the front door, to hear a thump on the piano. Her first thought was that there were

Dinah, the first gorilla ever successfully exhibited in the United States, was secured by a special expedition sent out by the New York Zoological Society. The terrier and a rabbit were among her dearest pets—but she was even more fond of dolls. Her favorite pastime was seeing the sights of a big city from an automobile

burglars in the house. However, since neighbors were very near, she ventured to enter, and as she opened the door—another thump! Then—*thump! thump! thump!* And the monkeys, in ecstasy, came racing out to her in the hall, thinking apparently that she had come to join in their fun!

That afternoon the monkeys had cer-

"Here's looking at you!" says the tiger, and licks its chops. The motion of the tiger's extraordinarily long tongue was caught by Doctor Ditmars with a high-speed motion picture camera recording 160 separate "frames," or pictures, a second. The scene is enlarged from one of these. You can see in your cat a tongue capable of this same long sidewise reach. All the cats have tongues proportionately long, with "barbs" which are useful in licking meat or wiping their lips

Suzette, one of the most intelligent chimpanzees that ever lived, is posing as an amateur journalist anxiously meditating the beginning of a day's work. She lights her own cigarette; knows that a safety match must be struck on the box, while an ordinary sulphur match must be struck under the table. She can roller skate, ride a bicycle, and conduct herself at a dinner table like a well-bred person

tainly had the time of their lives. Somehow they had managed to unfasten the door of their cage, which must have been merely latched and not locked. Then they had reveled in the freedom of the house; and certainly two mischief-loving boys in the same period of time could not have wrought a greater havoc nor enjoyed themselves more. When my wife and I went home in response to our daughter's summons, we were met by an appalling sight—the last word in chaos.

In the first place, the monkeys had been possessed with the delightful idea that everything up-stairs belonged down-stairs. They had opened all the closets and bureau drawers in my wife's and my daughter's rooms. The contents—dresses, waists, stockings, underwear, and furs—had been scattered about down-stairs on chairs, tables, piano, or suspended from the chandeliers. The rooms below looked as though a rummage sale had been in progress. I never knew how many neckties I had until I began sorting them out from the rest of the goods the monkeys had put on display.

Up-stairs was in equal disarray, for they had taken vases, rugs, small smoking tables, ash trays, loose papers and books from down-stairs and scattered them about in the rooms above. On the stairs there were broken vases. The floor of the sun-room was littered with fragments of flower pots which they had joyously pushed off the shelves. They had gone into my "butterfly room," and, after smashing the glass covers on seventy-five butterfly cases, had ruined about half of my valuable collection.

In the sewing-room up-stairs the mon-

(Above) An alligator in costume, an actor in a scientific drama of "evolution." On the head is a mask of modeling clay weighing a pound and a half. Black spikes on the back are cardboard. The alligator looks like a prehistoric dinosaur, that lived fifty million years ago.

(Right) The giant tortoise is eating bananas. It is not savage, but has jaws that will rip off fingers if the hand that feeds is careless. Sometimes a keeper, with an apple on a stick four feet long, mounts the tortoise and takes a ride, guiding his mount by moving the apple to right or left.

(Above) Here is Pete, the Nile hippo that has delighted visitors to the Zoo for years. Pete eats hay, but he likes bread better and will take two or three loaves into his mouth at a time. He's a slow eater. When he is dining on a mash made of oats and vegetables, and the keepers are in a hurry to clean up his stable, they go at him with a coal shovel! Pete knows the trick! He just opens that broad mouth, and the keepers shovel in the mash, a scoopful at a time!

keys had found a basket containing numerous spools of silk and cotton thread. Discovering how these could be unwound, they had scampered all over the house trailing the thread after them. Strand after strand wound from the sewing-room, through the bedrooms, into the hall, down the stairs, and then through the dining-room, living-room, and library. The house was a maze of thread, as though, after wrecking the place, the monkeys had wanted to bind up the wounds!

But they had not stopped there! One of the most exhilarating pastimes they had discovered was jumping from the

piano, bookcases, and mantel to catch and swing on the chains from which the lights were suspended. They had performed acrobatics while clinging to the bulbs, and the connections had pulled out, so that the electric wires had short-circuited. Every fuse in the house was burned out! Also, they had gone from one room to another, jumping from points of vantage to catch and swing on the pull chains. The chains, too, had given way. From one chandelier, the pull chains attached to seven lights were all gone.

All this monkey work was done, of course, with the utmost good nature,

merely in a spirit of play. It took a week for our domestic help, electricians, glaziers, and carpenters to set our house in order; but the culprits were never scolded. They were leaving us so soon that I did not even try to teach them the error of their ways.

In my home I have raised a great many monkeys of various kinds, with the object of having them become so accustomed to me that I could make very intimate camera studies of their life and movements. The young of orang-utans, chimpanzees, and the gibbon can be brought up without (Continued on page 210)

Early each year males of the deer family shed their heavy antlers. The "horns" drop off within a few hours apart. At the left you see a "monarch" that has lost half his crown and will lose the other half very soon. A few weeks after shedding, a soft growth springs from the head—new antlers. They grow almost half an inch a day, are soft and filled with blood. By September, when fully grown, the blood shuts off and the antlers harden. The females have no antlers. At the right you see the growth of antlers in July.

# Inside Facts About Smoking and Smokers

Curious information about tobacco and the people who use it

*By John Blakeley*

Assistant Vice President, United Cigar Stores Company

**O**F ALL the smokers I know, I think the man with the most peculiar hobby is one who never smokes any but five-cent cigars and only about half of each one of these. He is fairly well-to-do, and seems to have a good deal of leisure.

On days when he doesn't have to go to his "office," he starts out quite early in the morning and makes the rounds of anywhere from six to a dozen cigar stores.

At each store he buys a five-cent cigar, lights it, and smokes on his way to the next store. At the next place he continues smoking his recent purchase until he has looked over a large assortment of cigars at his price. Then, selecting a new one, he throws the old cigar away.

The other day a salesman asked him how he had got into this habit, and the man laughingly said, "I always did like five-cent cigars, and one day I smoked one that had an aroma and a smoothness which I had never noticed in a cigar before. I smoked that cigar to the last half-inch, and ever since then I've been on the lookout for its mate. I haven't found it, but I'm not going to give up yet. I've begun to think that maybe the wonderful five-cent cigar was a higher-priced smoke that got into the box of five-cent cigars by accident. But I'm going to keep on looking until I find its mate for a nickel if I can. If I can't, I'll die smoking five-cent cigars."

The other day the wife of a well-known New York lawyer went into a cigar store at Fifth Avenue and Twenty-third Street and asked a clerk to show her some moderate-priced pipes. "Nothing fancy," she said, "but good-looking ones; and I don't want to pay more than two or three dollars, at most four."

While looking them over the lady explained that she was taking great pains in selecting the pipe because it was for her husband. Finally, the rest having been eliminated, there remained but two from which to make her final choice, one with

a straight and the other with a curved stem.

"This straight-stemmed pipe is very nice," she said; "but I am sure it must be hard to hold onto because the bowl is so far from the mouth. I believe I'll take the curved stem. Would you mind trying it, please?"

"Do you mean you want me to smoke it?" asked the clerk. "I can assure you it will draw all right without that!"

"No, no!" said the lady, "I don't want

her husband's pipes just as some women buy their husbands' hats was the first for this particular clerk. However, the lawyer's wife has been buying his pipes regularly now for several years. Her husband smokes continually and likes a pipe on the street as well as when at home or in his office. Once his wife disliked to see him with a pipe on the street, but this was because his pipes had such large bowls. She always buys medium-sized bowls, and the pipe as a whole is a trim, substantial, good-looking article.

One man I know smokes a fine imported cigar which is priced at a pretty high figure. When he buys a new box his wife always goes along. The man himself is easily satisfied as to the color and shape of any cigars of his particular brand, but his wife is much more difficult to please. She has five or six boxes of the same brand opened, and before making her decision takes them to the light and considers them very carefully. The man, who invariably takes the cigars his wife decides upon, is never dissatisfied with his smokes. He says he wouldn't think of making a selection without her help.

The heaviest smoker I know to-day is a manufacturer of watches on a large scale. He is just past middle age, and he invariably smokes a pipe. He buys two pounds of tobacco at a time, one to be used at home and the other at his office. The two pounds last him just one week. He smokes continuously and with a long, strong draft, so that frequently in the course of a month he burns out a good heavy briar.

Only the heaviest and most constant smoker is likely to have this happen to his pipe. I know a good many men who are generally regarded as heavy smokers and who have never yet had this happen.

The use of tobacco is commoner among writers, students, and professional men than among any other classes of people. Some of them use it while at work, while others do so merely for relaxation after work.

## How This Article Came to be Written

**A** SUBSCRIBER sent us this letter:

"I'm one of those who disapprove of tobacco, and I find myself talking against the use of it whenever I get a chance. But I feel a lack of knowledge about the subject. Recently I was led into making some statements about the widespread use of tobacco which were contradicted by a friend of mine who smokes. I wish I had the real facts of the case. Why can't THE AMERICAN MAGAZINE give us some? Certainly it is a generally enough discussed subject so that everyone, whether he believes or disbelieves in tobacco using, would be interested to know them.

"How many people use tobacco? Is it true that 'thinkers' are inclined to be the heaviest users? Is the habit growing? What parts of the country consume the most tobacco? What kinds of tobacco are most used?" . . .

Here is the answer. Mr. Blakeley, assistant vice president of the United Cigar Stores Company, the biggest retail tobacco firm in the world, is an authority on the subject. He tells us all kinds of facts about the use of tobacco, and this magazine presents them as a piece of straight reporting.

THE EDITOR.

you to smoke it! Just put it in your mouth and walk up and down there behind the counter so I can see how it looks!"

When the clerk had done this, the lady was perfectly satisfied with her choice. "It's very good-looking," she said, "and I'm sure my husband will like it. I do, anyhow, and he says that is the important thing."

This experience with a lady who buys

"For the love of Pete?" Will's tone was simply outraged. "Are you sitting there with the first news section reading *nothing but the ads?*"

# Flivvers and Philosophies

A story of young married life

By Fannie Kilbourne

ILLUSTRATIONS BY T. K. HANNA

**B**EING married is very strange in one way, the way it makes you feel acquainted with everybody else who is married. At first, this is not so true. The first couple of months, you see married women breaking away from afternoon parties the very second refreshments are over, because their husbands like supper ready at sharp six, or being simply insulted by their husbands because they have merely forgotten to take out the cuff links before they sent their shirts to the laundry, and think with gratitude to heaven that you have married a man like Will and will never have such things to worry you.

Then little things begin to come up. The first one with me was about reading the Sunday morning paper. We get the Chicago paper on Sunday and I simply love it.

"Will you let me have the first news section, Will?" I asked the second it came.

Will passed it over, and while I was reading it he read the funny page and the sporting page and then began to fidget. At first I didn't notice so much, I was so deep in the news of the day. I told Will bits of it from time to time as he started to clear off the breakfast dishes—he always helps me with them Sunday morning.

"You can get a bridge lamp with a parchment shade for only six dollars and a quarter in Chi," I said, "and Mr. Henderson is charging ten apiece for both of those he has."

"Zat so?" Will asked politely.

"They're having a special department-store sale on georgette," I went on. "Do you suppose I'd dare take a chance on the shade and just order four yards of rose color by mail?"

"Steve Brody took a chance," said Will, flippantly.

I could see his mind wasn't on it at all. Pretty soon he said in a plaintive way:

"Don't you want to see the dramatic section as soon as you get through with the news?"

I nodded and read on.

"Does it say anything new about the strike?" he asked after another little while.

"What strike?" I asked absently. "If it takes four yards of stuff forty inches wide, I should think three and a half when it's fifty-four—"

"For the love of Pete!" Will's tone was simply outraged. "Are you sitting there with the first news section reading *nothing but the ads?*"

Well, that was the beginning of my discovering that all husbands—even Will—are something alike. For when I mentioned the matter to Dulcie, she said Roger was just the same, that nobody would think, to hear him talk, that it was his money she was trying to save; and Rose-

mary Merton said Howard was the same, too, only worse.

"It makes him simply wild," Rosemary said, "if I ask him to do a single thing or say hardly anything to him when he's reading the paper."

"So does it Roger," said Dulcie. "Anybody'd think it was an hour of silent prayer."

I suddenly recalled how, that same Sunday, after I had given Will the first news section, he had scarcely glanced up from it at my occasional comments about how funny that gingham should be fashionable for curtains, or didn't he think it would be a good idea to screen in our upstairs porch and use it for a sleeping porch this summer? And when I asked him to see if he could budge the window that had been stuck for a week he did so with an air of forced politeness.

**T**HAT, as I say, was the first matter which made me see that, in a few points, even Will was a husband. This, and a few other similar things, made me feel awfully well acquainted with Dulcie and Rosemary on account of their both being young and married; but I never dreamed that any experience would make me feel acquainted—in a deep sort of way, I mean—with people like old Mrs. Long, who quarrels so terribly with her husband. But I do; I feel well acquainted with all married women, and particularly those who don't get along well with their husbands.

I didn't use to understand; it used to just bewilder me. Mother and Father never quarrel and Will was always so sweet to me that I couldn't understand how Mr. and Mrs. Long could say such terrible things to each other. I understand now. I feel a million years older than I did eight months ago, when I was a mere bride, nineteen years old and, as I see it now, though I didn't at the time, very ignorant of life.

Mr. and Mrs. Long quarreled terribly the night of our housewarming. Dulcie got up the housewarming as a surprise on us and almost everybody brought us presents. Mrs. Westerly brought us a clock. Her husband was our minister before he died and she is about the sweetest old lady I have ever known in my life. It was a lovely little mahogany clock, and she set it on our mantel between the polychrome candlesticks that Roger and Dulcie gave us. Howard Merton started to wind it up, but Mrs. Westerly stopped him.

"The bride always starts the clock in her new home," she said. She had written on her card:

"O fortunate, O happy day

When a new household finds its place  
Among the myriad homes of earth!"

"I think I'll wait till everybody has gone, to start it," I said.

Mrs. Westerly squeezed my hand. "That's right, my dear," she said. "You and Will start your clock alone together. I hope it will keep time for you many years after I'm gone. And if it does, remember that a friend of your grandmother and Will's has put a wish on it." She laid a thin, wrinkled old hand on the clock. "May you always tick in a happy home!" she said. It takes an old person to say anything like that without anybody laughing, but from Mrs. Westerly it seemed very sweet and solemn.

We sat up a while after everybody had gone that night. We had been staying at Will's house or mine until we got our furniture, so this was our first night in our new home. We sat talking about how nice it had been of people to give us the party, and then we got to talking about Mr. and Mrs. Long, who had been the last to go and who had got into a quarrel right in front of us.

We joked about her saying, "I'm not asking you to be intelligent, Joe. I know that's too much to expect." And his, "Well, I'll admit there was one time in my life when I wasn't intelligent—when I got married."

Suddenly Will said, "I wonder if they ever liked each other the way you and I do."

"Oh, Will!" I laughed. The idea of the Longs ever having been in love seemed so ridiculous.

"I'll bet they did once," Will insisted. "Most people do when they get married."

"Then how did they ever get this way?" I demanded. "Can you imagine our saying the kind of things they do to each other?"

"No—thank God!" said Will. "And it isn't only the things they say—haven't you ever noticed the way they look at each other? As though—as though they hated each other?"

**W**ILL looked at his watch and it was after one o'clock. "Let's wind up the clock," he said. So he wound it, with his arm around me, and I set it. It was very still in the house, and the sudden sound of the little tick-rick was queer, kind of like a home coming to life, just beginning to breathe. I thought of Mrs. Westerly and her saying that she hoped it would keep time for us long after she was gone, and suddenly—I don't know why—I thought of Will dying. Of coming into that room and seeing our big chair by the table, our polychrome candlesticks on the mantel, hearing our little clock ticking, everything just as it was to-night. Would I ever have to listen to the little tick-tick-tick without Will's arm around me, knowing that I should never feel his arm around me again?

"Oh, Will!" I pressed my face into his

rough shoulder, and he held me tighter as though he were thinking the same thing, that our little clock might still be ticking some day when we wouldn't have each other.

"I'll always try to be a good husband to you, little Doll," he said suddenly in a husky voice.

I hung onto his hand tighter. "I'll always try to be a good wife to you, Will."

It was strange and solemn, it seemed much more of a pledge than the one we had made when we were married. It was like a scary prayer, standing there alone in our new home with the little clock ticking in the stillness.

The next morning everything seemed commonplace and natural enough. I looked at the little clock to see if I had time to make muffins for breakfast, and Will started off to the office by it. That very night he came home all excited. And no wonder! We were going to have a car!

Of course it was just a flivver. Father Horton had at last decided to get a bigger car, and he gave Will his old one and told him that if he wanted to trade it in, and get a brand-new flivver sedan, he would pay the difference and give it to us for a wedding present. If we wanted to! We did a one-step all over the living-room and sang so loud that Dulcie came out on her back porch and called over to know what the riot was about. We talked about it through supper.

"And I'll teach you to run it," said Will.

"Oh, of course," I said.

Just like that. We were both perfectly casual about it. Through the arch into the living-room we could hear the little wedding clock ticking away, and it sounded casual, too. There was nothing in the world to indicate that at that very moment our marriage was approaching a crisis that would make me feel acquainted with all the unhappily married women in the world.

**T**HREE weeks later the car arrived, looking all bright and shiny, and as nifty as a million dollars. We had supper early and left the dishes, so that Will could show me how to drive before it got dark. He steered out onto the pike, me sitting on the little seat in front by him. By good fortune, we passed Mrs. Curtis. It's seldom that you do pass just the right person when you want to, when you've got on your new suit or you're in a taxi, or something to your credit.

Will began explaining about the engine to me, but I was bowing and smiling to people on the sidewalk, and didn't pay much attention. It didn't make any difference, anyway. I was

out to learn to drive that car, not to hear Will lecture about its insides.

"You can't drive a car intelligently," he said, suddenly noticing that I wasn't very attentive, "unless you understand the mechanism. I've bought a little book for you to read, called 'How to Operate a Motor Car.' It's very simple."

"That book that I saw on the living-room table!" I gasped. "You didn't get that for me to read! Why, it looked like our old textbook in physics. All diagrams about cam shafts and float-feed carbureters—why, I couldn't understand that stuff if I read it from now to doomsday."

"Oh yes, you could," said Will encouragingly. "It's easy."

"Well, I'm not going to," I said firmly. "You can't tell me that all these half-witted-looking people you see driving cars know all about cam shafts and pistons and things."

"There are too many half-wits driving cars," said Will; "but you don't want to be like them. I want to get you so you understand the engine before you ever touch the steering wheel."

"Then I'll never get around to touch

the steering wheel at all," I said unhappily. "You're just spoiling driving for me, Will. It simply takes my appetite away, just as if somebody led you into a room with a wonderful dinner on the table, and said, 'Now, we aren't going to touch this dinner until we understand all about the digestive juices and how the human stomach works.' Just thinking about it would make me so sick I'd never want to eat the dinner. Please, Will, just teach me to drive. Please, Will!"

"All right," said Will in a resigned tone of voice. "But I think it's the wrong way to go about it."

**W**E WERE out on the pike by that time, and Will changed seats with me and let me take the wheel. "Well, suppose I just show you how to start and stop to-night," he said.

"All right," I agreed.

"First, you turn this key," Will said, leaning over me to reach the dashboard. "Then you fix these two levers like this and step on this. If the engine doesn't start you have to prime her with this. As soon as you hear your engine starting,

We just crept along to the nearest farmhouse, where Will "You said you'd done everything," he kept repeating...

advance your spark like this and open up a little on the gas, like this. Then keep your foot on the clutch and let off your emergency brake, like this. Then give her a little more gas and push her into low. As soon as you're well started, race your engine a few seconds, then cut down on your gas, and let her up into high."

I turned and just stared at Will with my mouth open. "You have to do all that!" I gasped incredulously, "just to get it started?"

"Sure," said Will. "You've seen me do it a million times." Well, it was the truth, I had. But he did them all so quick and I had never paid any attention. Someway, I never thought of a driver *having* to do those things. It gave me the same shock that it did the first time I found out that a pipe organist has to stretch with his feet in order to play. I had always thought he wiggled around on the bench like that to show off. Someway, in spite of having watched Will drive for years, I sort of thought you'd just have to push something forward to start and pull it back to stop.

So this was starting a motor car! And

stopping it was almost as much more. We stayed out on the pike till it got dark, going over and over it, starting and stopping, starting and stopping. When it was really dark, Will put on the headlights and said, "All right. Now you can drive her home."

**I** CERTAINLY felt pretty classy driving along Beeckner Street in our own car. I passed our house, on past Dulcie's and around the corner.

"Say, you can't cut a corner like that!" said Will in a shocked tone. "What if a car had been coming from the other way?" I hadn't thought of that! I went on clear around the block and past our house again.

"Don't you want to call it a day, and go in?" Will asked. "We've got time for a game of double canfield before we go to bed."

"All right," I said uneasily. But I went on past the house once more and around the block.

"What's the idea of looping the loop round and round and round?" Will asked plaintively.

There was no use pretending. I had

kept thinking it would come back to me, but it didn't. "I—I've forgotten how to stop!"

Will simply howled. And that wasn't the worst of it. He told everybody, said it was too good to keep, after spending the entire evening showing me how to start and stop. I believe in being a good sport about a joke on yourself, but it wasn't fair for Will to go putting on things that weren't so, like saying that we rode round and round and round all night till dawn broke and the gas at last ran out.

Well, Will finally showed me the different points about driving, till I knew them all. But that wasn't as good as it sounds. Knowing all the points, I soon found out, and doing them are two entirely different matters. I could sit on the porch and tell you how to stop on a hill and start again; but when I would be in the car all was different. I'd get rattled on a perfectly level road and push the gas the wrong way, thus leaping ahead when I'd think I was slowing down. This, everybody says, is not unusual for a beginner, but it did make me unusually irritated at Will.

Will has always been polite to me, but when he'd be teaching me to drive he changed entirely. He'd speak so quick and sharp at corners and so on that it certainly sounded cross to me, though he insisted that it wasn't. And someway there's something a little irritating about having your husband teach you anything. It sets you to wondering if he really knows as much as he seems to think he does.

**O**NE afternoon, Rosemary, who drives her father's flivver, took me out and taught me some more, and to my surprise I found that she did some things different from Will, like advancing her spark further, and so on. Will admits that Rosemary is a good driver, so it set me to thinking. That same night we went up to the Mertons' to play bridge, Will playing rottenly as usual, and I suggested that I drive coming home. I started off and Will started to say something.

"Now, don't keep telling me things, Will," I said quickly. "I'll never (Continued on page 175)"

got some water, and all the way he acted so aggrieved at me. "You can't run an engine on a pretty vase of flowers!"

# Billions in Junk!

The story of an amazing industry, as told by one of its oldest veterans, who has been buying and selling all kinds of waste materials for more than sixty years

*By Rex Stuart*

**W**HEN you mention the 'junk man' to most city people," said Patrick Hart with a chuckle, "they think you mean some tattered foreigner, with a red bandanna handkerchief tied around his neck, pushing a rickety cart with a cowbell hitched onto it. An occasional sight of him poking along the street—and the chorus of a song they used to hear in vaudeville, 'Any rags, any bones, any bottles to-day?'—is the only contact they've ever had with one of the biggest industries of the country.

"The housewife who sells her waste paper and rags to the man with a pushcart, or a horse and wagon, would probably think you were making fun of her if you told her that this same man represents an industry that does more than *one and one-half billion dollars'* worth of business a year. What's more to the point, if it wasn't for this business, the price of half the things you buy, particularly metals, would be too much for the pocketbook of the average man. That's why someone has called us waste-material dealers 'the surgeons of industry.' We save the world's wreckage and put it into use again."

Hart slid further back in his chair and stared at the muddy street through the window of his little ground-floor office. "This place doesn't look like much," he went on; "but I've stuck to it for forty-eight years, and I don't intend to give it up now. Anyway, it's been big enough for me to do a business that has run as high as *four hundred thousand dollars* a year—and that's that!"

Hart, who is sometimes called "the Junk King of the Hudson River Valley," is one of the most interesting figures in the waste-material industry of the country. More than sixty years ago he started out as a boy with a horse and wagon in New York City. Some of the scrap that he collected in those early days was melted up and went into the metal plates of the "Monitor"—the famous "cheesebox on a

raft" that saved the North's naval supremacy in the Civil War.

In 1869 he moved to Peekskill, New York, farther up the Hudson, and in 1874 he settled in Newburgh, another Hudson River village, that has since grown to a city of thirty-six thousand people. Here he has held forth ever since, in a little

manufacturing plants, shops, and offices.

On the same street with his tiny office are big storehouses in which he keeps an amazing range of materials, ready to be shipped when the markets are right. On the day I talked with him he told me that, altogether, he had between *four and five thousand tons* of stuff on hand. Further

up the hill from the river is a big yard where thousands of tons of iron and other metals are scrapped and made ready for shipments in carload lots. With oxyacetylene torches he cuts up everything from a boiler to a bridge brace. All must be packed solidly—for waste space in freight cars is an expensive luxury at present railroad rates. In addition to the oxyacetylene torch he uses big power-driven shears, which slash through fairly thin metal as a dressmaker cuts up calico.

As I talked with Hart I was amazed at the almost inconceivable range of the waste-material trade. Thousands of the by-products of industry—formerly discarded as useless—are now converted as if by magic into things that you and I buy daily. This is the biggest side of the business; but the house-to-house collection of rags, paper, old metals, and other articles that have outlived their original purpose forms a volume of no mean proportions. In the necromancy of modern reclamation there is a place for almost everything—stoves, horse-shoes, galoshes, twine, rope, anvils, tools, lead pipe, flat-irons, brass, pewter, paper, rags, bones, bottles, fats, umbrellas, plowshares, coffee-grinders, scales, wagon wheels, tin, and cardboard.

On the human side the range is just as wide. The junk man's customers run a gamut from the big manufacturers, with tons of by-products and worn-out machinery to the youngster who gathers old newspapers, bottles, and scrap metal, to get a few cents for candy and marbles, or the down-and-outer, who shuffles in with a handful of old clothing, gaping rubbers, old shoes, empty bottles, or a rusted iron

## What People Sometimes Throw Away

**"O**CCASIONALLY," says Mr. Hart, "the junk man may find in a bunch of scrap material a silver loving cup, knife, fork, or spoon. In a rare case he may come across a silver or gold watch case, worth as much as the rest of the waste put together.

"I have never been lucky enough to make any such discovery, however. Probably if any such articles are thrown away by mistake, the house-to-house collector has already removed them before he turns the stuff over to me. I did hear, a number of years ago, that in some paper we sold to a mill one of the mill men came across an old envelope containing several valuable diamonds.

"Restaurant keepers have to warn their help to be careful in shaking cloths and in dumping refuse that silver tableware doesn't get mixed up with garbage. It is said that one of the big chain eating house concerns keeps one man busy in each restaurant sorting table scraps, and that these scrap pickers recover more than enough silverware to pay their wages."

office on Front Street where, at the age of seventy-eight, he probably does at least twice as much business as any other waste-material dealer in a city of that size in America.

Since moving to Newburgh he has given up almost entirely the house-to-house collection of waste products. This material he buys from little collectors, and is thus able to concentrate on contracts with big

pipe that he has picked up in a back lot. "In the days before prohibition there used to be some queer cases," Hart remarked. "Some of the men whom the saloon had got a death grip on would do anything, say anything, or sell anything for the price of a drink."

"One dealer often tells the story of how on a hot summer forenoon, a hatless man rushed into his shop with an armful of what looked like tattered rags."

"Let me have a dime for these," he said, slamming the bundle on the floor. The dealer picked it up and found the stuff soaking wet.

"Where in the—" he started to ask, but just then the door burst open and out of the haze of the West Side water front came two women in soiled calico wrappers, yelling "Police!" and "Thieves!" as loud as ever they could. At the sight of them the man dived out through a back window.

**WHEN** he got the women quieted down, the dealer learned that the 'rags' were the week's wash of one of the poorest tenement families in the neighborhood. While the mother was giving her baby its bottle, the thief had sneaked into the kitchen and fished the clothes right out of the tub. I suppose he hoped to get the price of a glass of beer for them.

"I know of a former big business man who had slipped away down-hill through drink. After he'd squandered all his money he started in, piece by piece, to strip his home. Second-hand furniture dealers got his chairs and carpets, and pawnbrokers got the gimcracks."

"Finally he came to such a pass that he sold to the junk man his garden hose, stoves, and tools. After drinking up the few nickels that these brought, he cut away the lead pipe and plumbing fixtures and took off the gas chandelier—and sold them, too. Somebody put the landlord wise and he had the man arrested. The police found in the house just a bed, a few dishes, some corn meal, an extra pair of pants, a dozen neckties and a couple of last winter's hats belonging to his wife, who had left him rather than starve."

"The landlord had pity on the poor devil and dropped the charge. It didn't make much difference, however, for the man was arrested again a few days later. He'd chiseled away the lead pipe in the washroom of a neighborhood saloon, doubled it up under his coat and carted it off to the nearest junk man."

"Sometimes children, more through

mischievousness than meanness or bad intentions, will 'swipe' old rubbers, lead pipe, bottles, or scrap iron, and sell the stuff for junk. I never buy anything from kids under sixteen. Several years ago I got a lesson that I still laugh about."

"At that time I had two yards on opposite sides of Front Street, in which I used to keep old metal. Some of the neighborhood boys got the bright idea of sneaking in the back way of one yard, picking up some scrap and then bringing it around to the main entrance of the other yard and selling it to me over again. I stumbled onto the game when I noticed a suspiciously familiar iron rod. The boys owned up and I let them off with a little scolding."

"But it isn't only the boys you have to

on the dock until the top's dried off. It looks all right on the surface, but of course the moisture inside makes it weigh much more than it should."

"Do they ever catch you that way?" I asked.

Hart smiled. "When you've been in one business, boy and man, for sixty years, you'll learn to look out for such dodges. . . . I tell 'em that if they want to sell me wet stuff I'll pay 'em wet prices . . . and I do!"

"I've heard of a big New York company that has this wet-rope habit, too. The bosses will collect odd lots of scrap rope until they have as much as half a dozen cars. Then they'll telephone all over town to big junk dealers and get prices. After the first rainstorm they call

up the highest bidder and order him to get the rope out of the yard in a hurry. If he happens to forget that the water-soaked hemp has taken on weight, he's likely to lose money on the deal."

**I KNOW** of two young men just starting out in the junk business, who thought they could make money out of collecting 'clips.' These 'clips' are scraps of the cloth that litter the floors of garment factories. An old-timer in the game advised them to watch their step, but they just smiled at him and went ahead. Calling at a garment factory making a cheap brand of men's clothing, they were shown a neat row of barrels containing what looked to be nice clean cotton and wool 'clips.'

"There they are, if you want 'em,"

said the manager, who seemed awfully rushed. "But you'll have to talk fast and take them right away, for I'm a busy man."

"These new chaps bought the material at a rather high price, as they were anxious to make a good first impression. When they got the barrels to their store-room, they discovered that under a six- or eight-inch layer of nice clean 'clips' was a mass of waste paper, scrap iron, dirty rags, and dusty factory floor sweepings."

"On the other hand, a buyer sometimes strikes an unexpected windfall. A dealer in New York City got a call from the office of an advertising company that had handled the contracts of certain transit lines among other customers. Their business had been petering out, however, and they wanted to close up shop in a hurry."

"What'll you give for this stuff?" the manager asked, pointing to the equipment scattered around the office.

"One hundred (Continued on page 170)

DAVIS PHOTO SERVICE, NEWBURGH, N. Y.

Mr. Hart is one of the most interesting figures in the waste-material industry of America. Born in Ireland seventy-eight years ago, he was brought to New York as a baby by his parents, who died not long afterward in the cholera epidemic of 1849. Young Hart was taken into the friendly family of a junk merchant, where he got, as a mere child, his first experience in collecting waste products from house to house. At the age of fourteen Hart started out for himself. In 1874 he settled in Newburgh, New York, where he has occupied the same little office for forty-eight consecutive years. Here he has done a business in waste materials running as high as four hundred thousand dollars a year

look out for in the junk business. Older folks, and even big corporations, sometimes try shrewd tricks. Dealers near the water front in New York City tell me that sailors, when they get shore leave, often take along all sorts of tools, brass faucets, lamps, knobs, and other trappings of the ship. I have even heard that one steamer had its sailing held up for twenty-four hours because an important piece of engine-room machinery was lifted. The first thing the sailors do when they strike shore is to go to the nearest junk shop with their plunder. The dealer has to be everlastingly on the lookout for these fellows, because the police are likely to hold him partly responsible if the missing material is traced to his shop.

"I am often called on to buy batches of old rope from boats on the Hudson River. Before the boatmen offer these lots for sale, they sometimes dip them in the river and get them soaking wet. Then they leave the rope out in the blazing sun

# Human Nature as Seen

Stories of curious happenings in a great railway terminal—How  
People ask the station master for all kinds of  
bob cat or forwarding

*By W. H.*

Station Master of the

SOME few weeks ago, a well-dressed woman came to my office in the Pennsylvania Station in New York to complain to me about a porter. At eleven o'clock that morning she had come in on a train from Buffalo. A porter had carried her bag to the parcel-room where it was checked. Then she had arranged to have the porter meet her a little before two o'clock that afternoon and assist her aboard a train for Washington, D. C. And the porter—so she said—had kept her check!

Now the time for her train to leave being close at hand, she was greatly embarrassed because the porter had not met her, and she could not get possession of her bag.

"I hope you won't take offense, madam," I said, "when I say that I don't believe one of our porters could have kept your check. They have specific instructions not to accept such responsibility."

"But he did!" she said. "I assure you he did!"

"Have you looked in your hand bag?" I asked.

"Yes," she said, "and you can look, too. See here!" And she opened the bag, showing me a little compartment inside a big one. "That is where I always keep such things as tickets and checks. If I had the check it would certainly be in there."

"Have you been all through your pockets?"

"Yes, several times," she said, and promptly turned inside out the big pockets of her coat.

"How about little pockets?" I asked. "Got any little ones inside the big ones?"

"No-o-o," she hesitated. "Yes, I have—one; but I wouldn't have put the ticket in there! I never do."

"I guess maybe you did," I said, "unless that card whose whitish tip I see sticking out is something else!"

With a look of blank amazement, she pulled the check out of the little pocket. Then I called a porter, who went to get

her bag while the lady herself went straight to her train.

This woman had hardly left my office when in came a girl who was just about ready to burst into tears. She explained that she had been aboard a train that had just left for Baltimore; she had had to get

Baltimore, won't know what to make of my not being there."

My assurance that I would manage to let her husband know that she was coming on a later train helped her get control of herself, after which I gave her the benefit of my experience on lost tickets.

"It is a very common experience," I explained, "for people to get off a train because they think their tickets have been kept by the man who punches them at the gate. It happens every day; but I've never yet known an instance in which the man at the gate had kept the ticket. Usually these people have put their tickets in some pocket without thinking just what they were doing. Maybe you'll find your ticket in one of your pockets."

Quickly she went through all her visible pockets, and she seemed rather triumphant on turning to show me that she had found nothing.

"Never mind those pockets," I said, "they are the ones you always use, and you've already looked through them. Haven't you got a little pocket inside a pocket somewhere that you almost never use? Lots of people have, and that's where they seem to put things when they're excited or in a hurry."

She looked at me in astonishment. Then a smile broke over her face, and her hand wriggled inside her cape. The next thing I knew she was drawing out a ticket from the little ruffled pocket in the brown silk lining of her wrap.

The other day a man to whom I related these experiences expressed astonishment that such things should come to the attention of the station master. The fact is, as I explained to him, that hardly anything that happens to people

## Things to Remember When You Go to a Railroad Station

**R**EMEMBER, upon your arrival at a station," says Mr. Egan, "that it is a poor plan to do business with any but uniformed men. Don't ask questions of anyone else. Get the information you need about the city you have just come to *before* you leave the station, so that you will not have to consult people outside. It frequently happens that men following illegitimate pursuits linger about the vicinity of a railroad station in the hope of meeting some unsuspecting arrival, whom they may try to cheat in any one of a dozen ways.

"A similar rule applies when you plan to depart from a railroad station. Transact your business inside with the proper officials. Don't buy your tickets of anyone who accosts you outside the station. Don't entrust the money for your fare to someone who offers to buy your ticket for you. That is invariably the device of a cheat, who will pocket your cash and disappear.

"When you give your bags or bundles to a porter, be sure to take his number. Few people do this; but if you ever have a complaint to make it is the only way the matter can be traced.

"Persons who are arriving in New York and are unfamiliar with the city—elderly people, women with children, persons going abroad, and others who may need some special arrangements for their convenience—should let the station master know in advance by letter or telegram the time of their arrival. When communicating with him, give the identifying number of your car and reservation.

"Whether on a train or in a station, take great pains when you pick up a bag or suit case to be sure it is your own property, and that you are not exchanging bags by mistake. Women should take especial pains in identifying their black patent leather suit cases. Cases of this kind are more frequently exchanged than any other, because they are so nearly alike.

"Anyone who finds himself in trouble in a railway station or in need of special travel assistance should go to the station master for advice."

off because she could not locate her ticket.

"Oh, dear!" she almost wept. "I gave my ticket to the man who punches them at the gate before you board the train, but he didn't give it back to me! Now, my husband, who was to meet me in

who use the Pennsylvania Terminal is outside my jurisdiction.

My official responsibilities are summed up neatly in a little paragraph in the company's instruction book. According to this, I am responsible for certain property

Pennsylvania Terminal, New York

belonging to the company and for conditions about the station. Also, the five hundred train crews arriving and departing every day report to me. But in a thousand ways not mentioned in the little book, my job is dealing with human nature—saving folks trouble, getting them out of difficulties, big and little.

One bitter cold day last winter a United States senator telephoned me from Red Bank, New Jersey, to ask if I could help him out of a predicament. He had just been called West unexpectedly, and would have to start that night. He had left his big fur overcoat at home in Washington, and if this was to be of any use to him he would have to have it by nine that evening.

**IT WAS 12:30 P. M.** when I hung up the receiver after talking with the senator. Ten minutes later I had the station master at Washington on the telephone. Following our conversation, he immediately notified the senator's butler, who hustled the coat to the station so that it was put in charge of a Pullman porter on the 1:05 for New York.

Arriving in New York at 6:10 that evening, the coat was transferred to the custody of the conductor on a train which left for Red Bank at 7:30. The senator himself, having been notified, met his coat at the station there and slipped into it at exactly 8:56, whereupon he sent me a telegram, saying:

"Coat feels fine. Quick work. Thanks!"

Shortly after eight o'clock one evening a few weeks ago, the junior partner of a well-known New York law firm came to my office and breathlessly announced that the senior member of the firm was at that moment aboard a train

which had already left Washington for Chicago.

"It's very important that we should get him off that train," said the junior partner. "Is there any way to do it? He is going to Chicago to meet Mr. L—, and I have just been informed that, by some unaccountable miscalculation, Mr. L— has left Chicago to join my partner in

Washington to-morrow morning. A lot of big things depend upon their getting together with the least possible delay."

A glance at the time-table showed me that we were in luck: The train from Washington was due in Baltimore within three minutes. I gave "long distance" some idea of the emergency and asked her to work like lightning. She did, for inside of three minutes I was talking with the station master in Baltimore, who told me the train was just then pulling into the station. A minute later—four minutes from the time I put in the call—we had the lawyer himself on the wire. A word from his partner was sufficient to cause him to arrange at once to return to Washington.

**IT ISN'T** often that a station master confronts circumstances that would justify him in holding up a train to accommodate a passenger, but I have known even this to happen. One day, as I was passing through the concourse of the station, I saw a woman following a porter who was carrying two suit cases and some bundles. The woman herself was carrying more bundles and shepherding a flock of five youngsters toward the train gates. When I asked if I could be of assistance to her, she said, "I'm so afraid I'm going to miss the two-thirty for Pittsburgh, and if I do I'll go crazy with all these young ones to look after."

The hour hand on the big station clock showed that she had only a fraction of a minute in which to cover the several hundred yards to the train. So I called a porter and sent him running to tell the man at the gate to hold the train until I had managed to get a special party aboard. Taking the mother's

STONY BROOK, N. Y.

W. H. ("Big Bill") Egan has been station master of the Pennsylvania Railroad Terminal in New York for the past twenty-five years. The present terminal was built in 1910 and is one of the largest in the world. Last year it was used by 36,000,000 passengers. In the accompanying article the station master tells of his experiences in dealing with all kinds of people, and gives many hints of value to anyone who uses the railroads. "Big Bill" is one of the best known railroad employees in the country, for his job enables him in the course of a year to give assistance to many thousands of people who find themselves in all sorts of difficulties after reaching the metropolis. As you see from the picture, "Big Bill" can throw the force of a massive bulk into his varied duties. He is six feet, two inches tall, and weighs two hundred and twenty pounds. The picture was taken from one of the station entrances looking across the main concourse

There was no response for a moment, then Miss Mills said, "Mrs. Howland came down-stairs after that"

"I told you so! There is a plot afoot to do me out of my inheritance, and Austin Magee is at the bottom of it!"

# Wheels Within Wheels

The story of a double mystery

*By Carolyn Wells*

## This Will Lead You Straight Into the Story

RALPH HOWLAND and his wife Mary have as guests at their country house, Leonard Swift, an alert cousin of Ralph's of about thirty, and Rob Peters, who with his wife is bent on getting Howland to invest in a doubtful mine. Other persons of the story are: Austin Magee, right-hand man of Howland; Miss Mills, an accomplished young woman whose duties are both social and secretarial; Amy Lane, former nurse to the Howland daughter, Angela, who died sixteen years before in an epidemic of sleeping sickness; Conrad, the village half-wit, with a mania for releasing captured mice and birds, who says strange, puzzling things, and is thought by some to be dangerous at times.

One evening while Mary Howland is dressing for dinner a thunderstorm gives her a shock. It seems that the body of her little daughter had been taken away in a storm, and the recurrence has a confusing effect upon her mind. However, she recovers enough to get through dinner, but retires soon after. The party scatters. Peters seeks Howland in the library, hoping to finish the stock deal; but they are interrupted by Magee, to the annoyance of Howland and also of Peters, who is angered by the secretary's persistence, and leaves the room. Magee discusses some mysterious news with his employer, and Swift appears as Magee is going away. Later in the night, in the middle of another thunder squall, Miss Mills meets Mrs. Howland in the hall dressed in kimono and slippers. She says that she is looking for Leonard Swift.

The next morning Conrad, the simpleton, turns up at the kitchen door saying, "Mr. Howland is dead." He repeats and insists on the statement. Investigation shows the master of the house lying across his desk in the library, lifeless. Magee is first to be called. After sending the servants to get Swift, he quickly takes some papers from his employer's desk and locks them in his own, near by. Swift, on seeing the truth, takes charge and calls Doctor Avery, an old family physician, who has known the Howland couple for years. He can find no cause of death. His complete knowledge of Howland's condition doesn't warrant heart failure. The doctor telephones the county examiner, and then takes it upon himself to tell Mary Howland. He finds her distraught and strange. She replies to his statement of the tragic event that she knows Ralph is dead and adds, "Have you seen his will?"

DOCTOR AVERY lumbered down-stairs again.

"Mrs. Howland's mind is very much affected," he said, as he joined Swift in the living-room. "After the death of her child, it hovered in the balance, but for years she has been practically all right. This new tragedy, however, has, I fear, unhinged it, and she doesn't know what she is talking about."

"How does she seem? Is she quiet—or violent?" Swift asked.

"Perfectly quiet. Melancholy—not really alive to the situation at all. I'll watch her carefully; but she must see no one save the nurse just now."

Then Mason, the county physician, arrived. He had come from the county seat, five miles distant, and was eager to hear the details of his strange summons.

The two doctors went to the library, and Avery awaited with interest the opinion of his colleague. But Mason was as puzzled as himself, and the two men stared at each other and at the face of the dead man.

"The countenance, slightly cyanosed as it is, hints at poisoning," Mason said, "hydrocyanic, for choice. But there's positively no odor on the lips or on the body. It's not a plausible explanation. Yet there's no real symptom of heart fail-

ure. It certainly is not a stroke of any sort. I think we must report to the police."

"Oh, the publicity—the— Do you mean murder, Mason?"

"That's what it looks like to me, though I can't fathom the means. An autopsy may show the introduction of a long, fine, pointed instrument, hatpin, say, or a very slender dagger."

"But in that case, there would be—"

"Oh, I know, Avery. I only say that I cannot learn the cause of this death without an autopsy. And I prefer to report to the police first. . . . By the way, Avery, what's this?"

Mason drew the other's attention to a very small cut or scratch on the dead man's cheek.

"Can't see any importance in it. Probably cut himself while shaving."

"Not just the right place for that. And, besides, it's too fresh a scar. That cut occurred not more than a minute or two before the man died."

"At any rate, it couldn't have caused his death—if that's what you're getting at."

"It's a queer cut, like a little circle."

Doctor Avery scrutinized the wound.

"The merest scratch," he said; "might have done it with his finger nail."

"True," agreed Mason.

Chief Weldon and his detective made a somewhat dramatic entry. A crime of any sort was of such infrequent occurrence in the neighborhood that it was met with an awed excitement not wholly unpleasant.

"A murder? A dastardly murder?" Weldon inquired, in a stogy whisper.

"We don't know that," said Doctor Avery testily; "but the case must be looked into."

"Yes, yes, indeed," and Weldon rubbed his hands in anticipation of conducting the looking-into process.

AT NOON, though the autopsy had been completed, the chief of police was as far from certain of having a criminal case on his hands as he had been at first. In the living-room and in the presence of the assembled household he heard the report of the doctors. Although Mason was in charge, Avery was a physician of far wider experience, and the two had not quite come to an agreement. Both declared that there was absolutely no condition or symptom of the body incompatible with a simple, natural death; but neither was there any hint or indication as to the cause of death. The stomach contained no trace of poison, nor was there any on the lips or tongue, nor had any been introduced by injection into a vein.

Moreover, there was no stab wound, or shot. There was no bruise or abrasion of the skin, with the exception of the tiny scratch on the cheek; and that, both doctors averred, was not infected, and could not have brought death about. Indeed, they agreed that the little cut had doubtless come as the man's head dropped forward on the desk.

"But," said Doctor Mason, "I submit this opinion: I assert that when the autopsy was begun, the initial incision into the chest brought to my nostrils a sudden, fleeting whiff of the odor of prussic acid. This Doctor Avery did not notice, and he thinks I am mistaken about it."

"I do not say Doctor Mason is mistaken, I merely say I noticed no such odor," Avery remarked quietly.

"Is it essential?" asked Weldon, wonderingly.

"No," said Avery quickly; but Mason broke in with, "Pardon me, I hold that it is. If such an odor was present, it indicates poisoning. If not, we have no reason to suspect poisoning."

"Then look for some other cause," said

She stood, framed in the doorway, one hand on the knob, and looked from one to

Doctor Avery, curtly, "for I am sure that odor existed only in my learned colleague's imagination."

"Not so fast, not so fast," broke in Chief Weldon. "Negative evidence is far from conclusive. Justice demands its own, and until we can prove the death a natural one, we must look further—even if we fare worse. Will someone tell me the history of the case, if I may call it that, in a few words?"

"I will tell you," began Leonard Swift. "As my cousin's heir and successor to this property, and to most of his business affairs, it devolves on me to make the statement."

"You are his heir?" asked Weldon. "Has his will been read?"

"No; but I am familiar with its provisions, and I know I am the principal heir of Ralph Howland's estate."

"But he left a wife," said Weldon, wondering.

"She is amply provided for; but she is incapable of taking charge of the business matters and the property estates, which have been left to me. My late cousin knew that I would carry on his business interests and attend to his various enterprises, which, of course, a woman could not do. However, that's neither here nor there. You can read the will for yourself."

"Where is it?" asked the detective.

"I DON'T know," answered Swift. "It doesn't seem to be in Mr. Howland's desk, but it must be around somewhere. Maybe Magee or Mrs. Howland can throw some light on the matter."

But Detective O'Brien, who had come with the chief, was anxious to learn further

details of the events of the night before, and said so.

"Ask some questions, if you like," Weldon directed, a little relieved at the idea of assistance in his unfamiliar task.

"Who saw Mr. Howland last?" O'Brien began briskly, and his sharp eyes darted round the room.

"That's hard to say," Magee remarked. "I had an interview with Mr. Howland in his study, about eleven o'clock, and when I left him, Mr. Swift was with him."

"Yes, I had a talk with him," Swift agreed; "and I left him about midnight. He said he should sit up an hour longer, as he was not sleepy, and he had some matters to think over."

"He seemed well?" the detective asked.

"Perfectly," returned Swift; "never better. We discussed his will; in fact, he showed it to me, and when I said I hoped

another of the men. "I am Angela Howland," she announced. "Where is my mother?"

it would be many a long year before that document was called into use, he laughed and said he was sure it would."

"All right. Now, no one else present saw Mr. Howland after the hour of midnight?"

There was no response for a moment, then Miss Mills said: "Mrs. Howland came down-stairs after that."

"How do you know?"

"I heard her."

"Why should Mrs. Howland go down-stairs so late?" asked O'Brien.

"To begin with," Miss Mills vouchsafed, "Mrs. Howland is erratic, and is quite likely to wander over the house at night if she is wakeful. Also, last night there were several thunderstorms. Mrs. Howland is afraid of these, and she doubtless went down to seek her husband. I know she started to do so earlier, while

Mr. Swift was with him, but, hearing the men engaged in conversation, she came back up-stairs without going into the library."

"You saw all this?"

"YES, I stood in the upper hall, waiting to see if I could do anything for Mrs. Howland. But when she came up she only said good night, and went to her room."

"What time was this?"

"About twelve o'clock; I don't know nearer than that."

"But you heard Mrs. Howland go down again later?"

"Yes."

"At what time?"

"I can't tell you. I was wakeful myself, and was lying in bed, in the dark, so I don't know the time exactly. But I

should say it must have been at least one o'clock. Perhaps half past one."

O'Brien turned to the doctors.

"What time do you figure that Mr. Howland died?"

"About twelve or one o'clock," Doctor Mason said.

"It's impossible to tell exactly," the older doctor put in. "We medical men are not clairvoyant. We can deduce from symptoms as to the approximate time, but we cannot say positively within an hour or two."

"Well, we are sure that he was alive when Mary went down," Leonard Swift said, quickly; "if he hadn't been she would have raised an outcry."

Doctor Avery bit his lower lip—with him a sure sign of deep agitation. He alone knew that Mary Howland had said she already knew (Continued on page 110)

# Never Let Worry Worry You

That is the philosophy of "Bugs" Baer, famous newspaper paragrapher—His parents were so poor and his brothers and sisters so numerous that cheerfulness was all they could afford to have—The quaint and remarkable story of this extraordinary humorist

*By Hugh S. Fullerton*

**T**HE editor of the Washington "Times" may have been a pessimist, or he may only have been speaking with the voice of experience. He was talking to

the queer-looking, stuttering youngster who stood before him, smiling a twisted smile. The kid was a rather unimportant cog in the machinery of the newspaper, and his slim pay envelope contained only twelve dollars a week. He was a letterer and retoucher — which meant that when the artists wanted any lettering done or when the editor wanted the silver print of a photograph retouched so that it would reproduce better as a half-tone illustration, the boy was kept busy. The one thing which marked him as an individualist was that he was known as the artist who could spell—perhaps the only one in newspaper history.

The youngster had appealed to the editor for a promotion. He wanted to do cartoons and "funny" stuff, as the word funny is interpreted in the offices of newspapers. Bill McGonnigle had quit and the kid was seeking his job. No one else had applied to fill the gap.

"All right," the editor assented gloomily; "if you get one laugh in three days you'll keep the job."

Thus started the real career of Arthur Baer. Today, as "Bugs" Baer, the paragrapher, he is known as the man who extracts more chuckles, more laughs, and more grins out of the American public than any other man of the times. On occasions he also blisters the toughest of human hides with his caustic sarcasm.

Arthur Brisbane, a leader of the newspaper profession in the United States, declares that Bugs Baer is the best paragrapher in the world, and one of the really great humorists of all time.

Here is a youngster, without much school education, with a handicap of pov-

erty, with family and home conditions uninspiring, who has evolved a new type of human expression and of philosophy veneered in fantastic language, and who, according to the best newspaper judges,

vaudeville could exist without cribbing his stuff.

His "methods of working," if you may call them that, are as unique as his humor. Always he reminds me of a man sharpen-

ing a tool on an emery wheel. Bugs simply holds his head against the roughest edge of this whirling globe and allows the sparks to fly. He sharpens his wits by contact with the world, and adds the finishing touches by careful rubbing on the oilstones of literature.

Down at his office, the men who watch him enviously seem to think his work is easy, and that he devotes very little time to it. On the contrary, Baer, like all men who achieve success, works all the time. Whether in theatre, cabaret, at a beefsteak dinner, or at a hilarious party in some weird corner of New York he is working—storing up the wisdom that is not in books and the wit that flashes only in such gatherings.

He reads everything, but especially newspapers — scores of them! He reads carefully, rather slowly, and peruses with as much interest the politics of Central Europe as the latest scandal or the major league batting averages. In his rooms you are just as likely to find Freud or Nietzsche or Emerson as to discover the "Life of Jack Dempsey."

One evening, at an unfettered banquet where songs and jests and the cynical, bitter wit of Broadway ran wild, Bugs arose and made a semi-serious speech on the theory of Einstein. It was sharp, clever, bristling with delicious ridicule. Yet every sentence showed that he had read Einstein understandingly, and that he had

a clear and comprehending grasp upon his theories of relativity. He confessed later that he had "just skimmed through" Professor Einstein's works — "skimmed through" and grasped fairly the wider scope of the ideas.

## Some "Bugs" Baer Paragraphs

**I**F APARTMENTS get any smaller, the mice will think they are traps.

You send your collars to the laundry to be cleaned, and they sharpen 'em instead.

Marriage vows state that a wife shall go fifty-fifty with her husband. She does—fifty for a new hat and fifty for a dress.

The town was so tough that even the canary birds sang bass.

He wouldn't shave until Bryan became President, and now his whiskers are growing on a trellis.

Beauty used to be skin deep. Now it's only powder deep.

There isn't much difference between monkeys and folks. Monkeys take their coconuts whole, while we take ours shredded.

Under new radio-tuning laws Newark is WJZ and Pittsburgh KDKA. That naturally makes Atlanta KKK, while New York is BVD, Detroit FOB, Virginia is FFV and the bootleggers are COD.

gets ten laughs to the column where the average newspaper humorist considers it a triumph if he gets a grin.

Baer supplies Broadway with more quips and jokes than all the other jesters combined. It is hard to conceive how

ARTHUR ("BUGS") BAER AND JACKIE COOGAN

"Bugs" Baer's paragraphs, packed with rollicking, fantastic humor, are published daily in dozens of American newspapers and laughed at by millions of readers. One in a desperately poor family of fourteen children, Baer was born in Philadelphia thirty-seven years ago. His first newspaper job was that of office boy, at two dollars a week, with the Philadelphia "Public Ledger." Burning with a youthful ambition to draw, Baer finally wedged his way into the art department, where he had more or less experience in retouching photographs and doing similar work. Later he went to the art department of the Washington "Times," and it was with this newspaper that he first demonstrated his striking capacity for putting twisted humor and philosophy into paragraph form. In 1915 one of his paragraphs hit the managing editor of the New York "Evening World" so hard that he immediately hired him. Almost overnight Baer gained a national reputation as a paragrapher—a reputation that he has been adding to ever since. The photograph above shows Baer sewing a patch on trousers that almost swallow up Jackie Coogan, the boy wonder of the movie world.

His taste in literature has quite as much range as his taste in human beings. He can "do" a world's championship baseball game one day and a session of the Supreme Court the next—both equally well. Parsifal, the Follies, and an Ibsen drama are all one to him, and he can get as much out of "A Midsummer Night's Dream" as out of "Old Sleuth." It is simply because he likes life, and is interested in everything and everybody.

Almost everything is a fair target for his jests; but there are three things he never ridicules: Thoreau, the Bible, and a person who is physically or mentally afflicted.

He is a "mixer"—inconspicuous, listening, seeing, observing, and storing his brain full of ideas. He gets to his office, exchanges jests with everyone from the elevator boy to the owner, sits down at his typewriter and pounds away. It takes him an hour or so to hammer out his day's work—two hours if he stops to "kid" with the others, half an hour if he is anxious to get somewhere else. It looks easy; but to him the writing is merely the mechanical setting down of the accumulated wit and wisdom of the day. His hardest work is to decide what topic to write upon. Given a text, the rest is easy; for he can twist and distort his ideas on

the orbit of Mars to apply to the content of a clam chowder.

His brain must be a veritable storehouse. It is recorded in his office that no subject has ever been suggested on which he could not write with considerable knowledge, no matter how fantastic might be his method of expression. Also, it is recorded that he never has to look up facts on any subject. If it reaches that point he passes up the facts.

**H**OW this youngster, born in wretched poverty, and entirely lacking in what is usually called "educational advantages," could become the world's foremost creator of fantastic philosophy may be hard to understand unless one knows him and his story.

It is the story of a career as short, as queer, and as bizarre as are his paragraphs. Perhaps his humor is twisted and his philosophy is expressed backward because his life has been lived that way. As surely as the smile often hides a tear, or a tear blurs over a joke, you will find that the real humorist veneers sorrow with a laugh and forces the face of tragedy into a grin.

He has a philosophy of life—a creed short and simple. All there is to it is "Never worry!" Knowing him, however,

I think he would express it better as "Never let worry worry you."

When he works he hums the chorus of one of Frank Pixley's old songs. Probably he has forgotten the words and permits the tune to carry the idea. This chorus runs:

Never let your heart be worried or fumed or  
flurried,  
If you do you'll soon be buried!  
Care will only kill a fool,  
And when the troubles of life beset you and  
fret you,  
I'll bet you the hoodoo'll never get you,  
If you just keep cool!

"I learned never to worry when I was eight years old," says Bugs. "Had to learn it in our family quite young."

He was born in Philadelphia on January 9th, 1886, the seventh child of a family of fourteen children, a family living in extreme poverty.

"What sort of a man was your father, Bugs?" I inquired.

"Perfect type of the poor man who has fourteen children," he said, his face twisting into the queer little grin which makes him unforgettable.

"There wasn't a whole lot of education going around, and my first work of fiction should have been entitled 'Forty Reasons Why a Kid Shouldn't go to School.'"

"In spite of (Continued on page 184)

# Do the Wise Thing if You Anyway Do

To stand still is the easiest thing in the world—It is important to keep moves you will stand twice as much chance of getting ahead  
Bamberger and Felix Fuld, the two men responsible

*By Helen*

**T**RAVELING along the lane that marks the Pennsylvania Railroad's main line from New York to Philadelphia, one signboard repeated half a dozen times focused my attention.

L. Bamberger & Co., Newark, N. J.  
One of America's Great Stores

I smiled at the sheer blatancy of it. A few days later I repeated it as a good story to one of the most important men in the dry-goods world.

"Why do they put out a sign like that?" I demanded. "It's funny."

"The odd part of it is that it's true," he replied. "For thirty years that store has been forging ahead at a rate faster than any other department store in the country, in proportion to the growth of population. Near enough to New York to feel the competition of some of the biggest stores of the world, those people have built up a business in their own territory that has quadrupled in the past ten years, and that is growing now at a rapid rate. We have had two years of financial depression, yet early in 1922 they began enlarging their building, adding over one third to the size of the store."

"I don't know of any retail store in the country where the people employed get as much of a share in the operation and results of the business as at Bamberger's. Go over there and look at the place. Talk with the two men who have made it, Louis Bamberger and Felix Fuld. You'll believe that signboard yet."

I went over to Newark. One block off the main shopping center is the handsome building rising eight stories under the huge roof sign, "L. Bamberger & Co." Across the street is the original store, a six-story building, now used for stock-rooms, repair and service departments. These two buildings, with storage warehouses, cover twenty-three acres of floor space and give employment to over twenty-eight hundred "co-workers." (The term "employee" is never used at Bamberger's.) By actual count one hundred and eighteen thousand people have passed into the store in a single day. Outside and in, the store has all the characteristics of a high-class department store, with perhaps unusually courteous and painstaking salespeople, but with no marked indication of anything that would answer the question as to why this store has achieved such a signal success.

The answer to that question took me to the two men responsible for the business—Louis Bamberger, president of the

company, and Felix Fuld, its vice president. For thirty years these men have been partners.

I called on the partners, who through all these years have worked in such harmony that among their fellow workers it is accounted their outstanding characteristic.

"Do you want to talk with us separately or together?" asked Mr. Fuld.

"I think I'll try both," I answered, at which he laughed, and added:

"Then begin with Mr. Bamberger. He started in the business before I did."

"By about three days," amended Mr. Bamberger. A small, quiet man, slight of frame but giving a sure impression of balanced and controlled power, Mr. Bamberger hesitated a moment when I asked him to tell me of the store's beginning.

"MY ADVERTISING manager tells me I will spoil a good story when I tell it," he said. "For sometime unknown to me there has been a tale current that I came over here to take care of a bankrupt stock I had bought and, finding it profitable, stayed. The truth is that I had been waiting for a location in Newark for two years, and a part of that time for this very location. I had stayed out of business two years to get just what I needed to go into business. I had been in the wholesale business and I made up my mind to get into the retail end. The first thing to do was to get capital, a location, and people to work with me, the last being as essential as the two others. I was in New York, but I found myself considering Newark. I took a great deal of that two years to study Newark. It wasn't easy either, I assure you, for me to stay out of business that long. I was not idle all that time, but I did only work that was temporary. I didn't like waiting, but I had seen too many men fail because they would not wait for capital, for a location, or for that most important thing of all, business associates who could be trusted."

"So I waited. I came to Newark many times. Day after day and night after night I walked the streets, watching the people. I counted the people passing. Broad Street then as now was the main shopping district. But I could find no location on Broad Street that met my needs. Then I tried Market Street. It was not an attractive street; there were many saloons, and the dry-goods shops were mainly of the type that showed their goods on the sidewalk. But one block from Broad Street there was what was, for those times, a fine building. I thought the people could be induced to walk one

block if they could get something worth walking for. Finally, there was a vacancy but I was not quite ready financially. I had to stand by and see another man rent the store and start in the very business I had waited to start for so long.

"Disappointed? I was bitterly disappointed. But still I looked and waited."

"It was four months later that the firm went bankrupt. I had no idea that a second chance would come to me so soon. This time, however, I was ready. I had my associates, and I sent for them and we began."

"And it was here my big opportunity nearly slipped by me," said Mr. Fuld, who is as dynamic in his movements as his partner is sedate.

"Mr. Bamberger had sent for Mr. Louis M. Frank, who was a partner until he died ten years ago and who was one of the best merchandise men in the East, and he had also sent for me. He came to the house, and as I was out left a card with the maid. On it was written: 'See me at 147 Market Street, Newark.'"

"But the maid never gave me the card, and although it came on Friday it was Sunday before I found it on the table in the hall. I didn't know what was going on at 147 Market Street, Newark, or why Mr. Bamberger wanted me there. From Friday to Sunday was a long step but somebody might be over there Sunday, so I took the first train to Newark, found Mr. Bamberger in his shirt sleeves marking stock, and joined him. You can't grasp an opportunity too quickly; the seizing of it the very minute it presents itself is often the hair line between success and failure."

**T**HE new store opened with a bankrupt sale, but within a week the partners were buying new stock.

"If we had known then what we know now, we could have a store to-day that is twice the size of the present one," said Mr. Fuld. "If there is one thing we have learned in these years it is how little we know about anything. But we had to go ahead and learn as we went. It is the same now. Every morning brings a new day for learning. When we can't reason a thing out we have to go ahead and do something. To do nothing is the easiest thing in the world. Anyone can manage that. But to keep active means the overcoming of inertia, which is the main thing that holds everyone back from progress. Think of the days when they put a man in chains just because he was active enough to think up a new idea! If you

# Know What It Is—But Something!

on doing to the best of your ability; and even if you make some foolish as the man who does nothing at all—The story of Louis for the development of a great department store

*Christine Bennett*

keep on *doing* to the best of your ability you may do some foolish things, but your chance of getting ahead is twice that of the man who does nothing at all.

"To get back to the store at its beginning: One of our most exciting days was the one when we had to consider the matter of delivering goods. We had to buy a horse. Has anyone told you about Finegan?"

I assented. Finegan is a store tradition. When the time came to buy a horse, Mr. Bamberger went at it as carefully and painstakingly as he had gone at the selection of a store location.

"I examined over a dozen horses," he said, smiling. "We run nearly a hundred autos for delivery now, and the purchase of the whole lot has never given me as much concern as the buying of Finegan. But my last dollar was in the business, and so much depended on Finegan's lasting. And he did last."

**F**INEGAN drew Bamberger delivery wagons for years. Then he was pensioned in luxury in the Bamberger stables. Once a year, when the delivery wagons paraded, Finegan was carefully groomed and hitched up and proudly led the ever-growing line, his sole duty until he died a natural death.

The new store made money from the start. Those who had told Mr. Bamberger that customers would not turn the corner and go off the beaten path saw people turn the corner and walk the extra block. During one of the very early days a woman came in with a bundle of goods which she said were not what she wanted.

"Take back the goods," directed Mr. Bamberger, "and give her back her money."

The woman was amazed. She went out of the store and told her friends.

"Nothing," Mr. Bamberger assured me with great emphasis, "has helped to build the store more than this policy. It was not a new idea. I believe John Wana-

maker was the first to use it, but it was new here. I adopted it because I wanted to be fair with the customer and this seemed to me the only way to convince the customer that I intended to be fair."

These are the men who have built up in Newark, New Jersey, under the name of L. Bamberger and Company, one of the most remarkable department stores in the United States. Louis J. Bamberger (right) is president and Felix Fuld (left) vice president. Not only do the partners visit and study other stores, but once a year they send every employee—"co-worker" is the term always used by them—to some of the New York City stores to observe the methods employed, and then to make recommendations for their own store. According to Mr. Fuld, no small part of the company's accomplishment is due to the fact that the partners have never bought chairs so comfortable that they could not get out of them quickly. Mr. Bamberger was born in Baltimore sixty-eight years ago, and Mr. Fuld in Germany ten years later. They started the firm of L. Bamberger and Company over thirty years ago.

"Some people do not understand," corroborated Mr. Fuld earnestly, "and you cannot make them believe that you have to be honest in business as a protection. If you happen to be born honest, you're lucky. Some of us are. But leaving out all ethical considerations, look at the practical end. No matter what your inclination

may be, you will have to *adopt* honesty if you are going to succeed, as an individual or as a merchant. You can't be honest without losing at times, and that is what takes backbone. Almost everyone starts

out with the intention of being honest, but some slip off the track. In business you have to be honest to the point where you can forget number one when you need to, to *be* honest. Give the people a square deal and tend to your knitting. You'll be compelled to attend to it to give them a square deal. It works backward as well as forward. You'll be compelled to sell reliable goods, and you'll have to keep on the jump to get reliable goods to sell. You'll lose the idea that you know it all—if you ever had it—because no honest man can hold that idea. You'll have to be amenable to the ideas of other people; they know something, too. If you're honest, you're going to admit that knowledge. You'll have to learn from everybody all the time. If this store depended on Mr. Bamberger and me for its ideas it couldn't last. We have to learn every day from our co-workers."

**I**N NO other organization which I have investigated have I found such an ingre- sive organization for learning as that at Bamberger's. As deliberately as he studied Newark, Mr. Bamberger has studied the retail business. But the whole force studies with him. The entire management of the store is by committees of the co-workers, and study classes in merchandising are always running among all classes of co-workers, up to the buyers and executives. In addition to this, and to the regular store critics who visit other stores for the purpose of seeing what they are doing, every member of the selling force as a matter of regular duty visits the department stores in New York City two days each year at the expense of the firm. The salespeople go in twos. They are (Continued on page 121)

# INTERESTING PEOPLE

## Charles S. Clark—the "Seed Corn King"

A MORTGAGE of seventeen hundred dollars on his father's farm, and a swing around the United States for eight seasons as a professional baseball player, gave C. S. Clark, of Wakeman, Ohio, a start that has enabled him to become the "Seed Corn King of the World."

Three hundred and thirty-six farmers in northern Ohio plant a hundred and thirteen varieties of corn for him each season. Thousands of acres of the best farm land in the Buckeye State are devoted, under his direction, solely to raising seed corn, which is shipped by the carload to seedsmen all over the United States and to Canada and other foreign countries.

Forty-four years ago Clark started this business with five dollars cash, borrowed from his mother, and an acre of land rented to him by his father. To-day the gross annual turn-over of his business amounts to two hundred and fifty thousand dollars, and it is steadily growing. Likewise the story of Clark's struggle to win success in the face of odds is unique.

Clarke's father was a farmer. He owned fifty acres of land at Wakeman, by which he made a living for himself and family. It was difficult for him to make very much headway, for, after living expenses and the interest on the mortgage had been paid, he did not have a great deal left to apply on the principal. He needed help, and day by day, as he went about his work, he looked forward to the time when his son Charlie would finish his course at the village high school, and then be able to give all his time to helping his father. Charlie graduated at eighteen. He had ambitions of his own, and promptly made them known when his father questioned him as to his plans.

"What will you do, now that you are through school?" asked his father.

"I have been thinking of going to Cleveland to learn to be a bookkeeper. It seems to me that I could make more money in that kind of a job than I could by working on the farm."

"You will stay right here, and help me pay off the mortgage," replied his father decisively.

That was the end of the discussion, and Charlie fell in with the family plans. But he was not entirely satisfied. He wanted to earn money faster than he could possibly make it by following a plow. One

day, while he was reading a seed catalogue sent out by a Cleveland concern, he came across an article about seed corn, which he read with keen interest.

In that moment an idea was born that has shaped his life and made him independent. He would raise seed corn and sell it to seedsmen.

That would bring ready cash each fall,

which could be applied on the mortgage.

He talked the matter over with his father and mother, and they encouraged him to try it out. His father agreed to let him have the use of an acre of land, the rent to be paid out of the crop. Then his mother gave him five dollars for seed. Charlie went to Cleveland to get seed corn, and after he had made his purchases, eaten his lunch,

and paid his fare both ways, he had fifteen cents left. The fortunes of a big business were wrapped up in that bit of small change.

With the money young Clark bought fifteen postal cards, and put in the evening writing to seed dealers in various parts of the country. Two orders were received from the fifteen cards, one for \$8.40 and the other for \$6.

When he was twenty his father died, and young Clark became the sole support of his mother. He worked early and late to make a living and to pay off the mortgage.

His ability as an amateur baseball player attracted attention and he was engaged by a New Castle, Pennsylvania, manager to travel through the United States as a professional. As a member of the New Castle team his pay was \$60 a month, but he was soon making more money. For a number of years, while he was playing with the big teams, he sent his mother \$200 a month regularly.

Ball playing fitted in nicely with the seed corn business. After planting in the spring, Clark played ball all summer, and when the baseball season was over he returned to Wakeman and sold his seed corn. During his travels he looked up dealers in the towns he visited and obtained orders.

Eventually his seed corn business required so much of his time that he decided to give up ball playing.

"Be sure and mention J. M. Whiton, a general merchant; L. S. Hall, and George Cleveland, retired farmers, all of Wakeman, who helped me in the early days," said Clark in telling the story. "They loaned me money to pay for seed corn in the fall, without interest. It took me four years to pay off the mortgage on the farm, and after that I got money at a Norwalk bank on notes endorsed by my mother."

"After I had been going for a few years I sold a carload of spoiled corn to a Philadelphia concern. All the cash I had in the world was tied up in that shipment, and

Charles S. Clark is known as the "Seed Corn King." Under his direction three hundred farmers raise a hundred and thirteen varieties of seed corn every year, devoting thousands of acres of Ohio's best farm land to this purpose alone. When eighteen years old, on a capital of five dollars borrowed from his mother, Mr. Clark made his first venture in seed corn. Later, while touring the country as a professional baseball player he saw his chance to sow seeds for future business, and the harvest came in. To-day his seed corn enterprise has a turn-over of \$250,000 a year. In the circle you see Mr. Clark. Also, in oblong at extreme left in middle row as he appeared when playing shortstop with the Decatur team, champions of Illinois, in 1886

of course I lost all of it. That loss was charged up to inexperience. Hall and Cleveland helped me out, and I was soon going ahead faster than ever.

"When I was thirty years of age, and after I had been in business for twelve years, I was able to borrow ten thousand dollars at the Huron County Bank at Norwalk on my own name. It was necessary to have considerable cash in the fall to pay the farmers for the seed corn; but it all came back quickly after the corn had been shipped. From that time to the present the business has grown until I am able to handle all of it without asking the bank to lend me a dollar.

Clark does not issue a seed catalogue. He gets out a price list naming the varieties of corn he handles, including nineteen kinds that he has developed by "Bur-

banking" other varieties. This list is mailed to seedsmen, who place orders a year in advance. Clark then arranges with farmers to raise the corn from seed furnished by him. The actual growing is done in small areas completely isolated from other corn, under regulations prescribed by Clark himself. One requirement is that the corn stalks be cut off just above the ears, in order to give the corn more air and light. Clark himself raises seed corn only, on a small farm of eighty acres.

"What do you regard as the secret of your success?" I inquired.

"Stern necessity and honesty," he replied. "I was right up against a stiff proposition and I had to do something. The mortgage had to be paid. There was no choice. *It simply had to be done.* That

made me think of ways to make money, and I tried seed corn raising because it was the most promising thing in sight. Of course I hit upon something for which there was a big and growing demand. And let me make this suggestion: If you are thinking of making a venture, study market possibilities very carefully before you start. You may have a good thing, but the market may be difficult, variable, or restricted. A big element of salesmanship is in knowing *when* and *where* to sell, as well as *what* and *how* to sell. My recipe for success is simple: Work, thrift, loyalty to friends, persistence, and a product for which there is a real demand. There is no magic in those qualities. They are as old as humanity; but success cannot be achieved without them.

ALBERT SIDNEY GREGG

## She Furnishes Ready-to-Use Bags of Tea to Big Hotels

**I** WAS having luncheon at the Hotel Vanderbilt in New York with one of that hotel's executives. Tea was served in the latest way; that is, the leaves were contained within the pot in a little gauze bag, the tag of which protruded from under the pot's cover.

"All the tea served in this hotel," said the executive, "and in our other hotels, in Newport, Georgia, and Porto Rico, is supplied by the woman whose name you see on the tag. She also supplies the Ambassador, the McAlpin, and other Boomer hotels, the hotels of the Statler group, the Bellevue-Stratford and the Ritz in Philadelphia—in fact, she apparently has on her list a majority of the big hotels throughout this region."

Miss Gertrude H. Ford actually numbers among her customers over three hundred and fifty hotels and clubs, stretching all the way out to St. Louis. In telling how she built up her big business, Miss Ford said that she was twice indebted to one of her customers for a leading idea, and it was her belief that success came to her through abandoning certain false notions of life with which she started out.

"I was born and brought up," she said, "in a little town near Toronto, Canada. Conspicuously displayed in our home was the picture of a castle in England that was connected with the origin of one of the branches of our family, and apparently it was the aim of the family to live up to that castle. Certainly we children gained the idea that there was something very superior about us. However, the family's fortunes became such that not only my brothers but myself had to earn money.

"One of my brothers, who had come to the United States, always thought I made the best nut cake in the world, and he believed I could get rich supplying such cake to hotels in New York. After he had rented an apartment in this city—and that was fifteen years ago—I came down, baked my cake in the apartment and, accompanied by a colored maid who carried the bag containing my samples, went the rounds of the hotels,

my first customer being the old Fifth Avenue.

"The fact that I was not permitted to go selling without the escort of a maid shows how the family clung to its aristocratic notions. However, after three weeks of the maid, I awoke to the nonsense of the whole proceeding. It was an awakening in general. I saw that as a young girl I had no more to fear from the

social position, or business occupation.

"Dealing with the hotel stewards in my new way, I never had reason to regret it. After I had been selling my nut cakes for four years, one of these stewards said to me, 'Miss Ford, I want to go on buying from you, but I wish you would bring me something staple. As a matter of fact, I don't see how you are ever going to get ahead with your nut cakes, competing as you have to do with hotel chefs.'

"It was quite natural that the suggestion of something staple should turn my attention to tea, since my father had been in that business. The words of the steward also led me to determine that, to whatever extent I had been selling cake on the strength of my personality, I would sell tea strictly on a basis of quality and value. With that end in view, I established direct importing connections in Ceylon, China, Formosa, and other tea-growing countries, and made a thorough study of blending. A little later a steward said to me carelessly, 'Oh, yes, I'll give you an order for your tea.' 'No,' I replied, 'you will not give me an order until you have thoroughly tested my samples.' And that is the way all my present business has been built up.

"My first tea was sold in bulk. Two years later the steward at the old Hotel Manhattan in New York remarked to me, 'Why don't you bring us tea done up in little bags that we could drop right into our pots? It would save us trouble and waste in measuring out individual portions; we would not have to bother with strainers, and it ought to save *dear* on tablecloths. Then there would be no cleaning of the leaves out of the pot, and that ought to prevent a lot of breakage.'

"This was the origin of an idea that made a widespread appeal almost instantly. The generosity of the steward who casually passed it along to me was in no way lessened by the fact that he also gave it to another person, a man. It was for each of us to make out of it what we could."

To have an idea bestowed on you by a friendly customer is one thing, and to act

Alertness in accepting valuable hints from customers has been the foundation of Miss Gertrude H. Ford's business. Her first venture in money-making was selling nut cake; next she sold tea in bulk. Now she supplies more than three hundred and fifty hotels and clubs with little gauze bags of tea that are all ready to drop into the pot

hotel stewards with whom I tried to do business than from the young men who were admitted to my parents' home. I saw that they respected every woman who respected herself; that, regardless of their origin, they were in the main not only able men, but kindly, gentle men. In brief, I learned the great lesson that personal worth has nothing to do with birth,

on it with celerity, intelligence, and enterprise is something else. For a long time Miss Ford, in addition to supervising her workrooms in New York, did all her local delivering, as well as selling, in a cheap automobile. This bespeaks the energy she at all times has put into her work. As

for her principles, let this incident speak: During the World War she conceived the idea that business people should see, not how high they could boost their prices, but how low they could hold them down. Following this policy in the face of her own increasing costs, she in 1918 had a

deficit of twenty-six hundred dollars. "That," she now says, "was carrying it to an extreme. In acting for the public good you are not called on to injure yourself. Still, I would much rather have lost that money than have made any through profiteering." F. B. COPLEY

## Blind, He Runs a Print Shop and a Weekly Newspaper

TEN years ago John B. Leach, of Salamanca, New York, called himself a happy man. He had a wife and child. He had worked as a traveling printer. Sometimes jobs had been uncertain, but now he was nicely settled. Things were sitting pretty. In Salamanca he had found a printing shop for sale, and had bought it with very little cash but with a whole lot of hope. Twenty-seven years old, he was full of ambition, and the mortgage and the notes he had given in part payment for the plant seemed to be nothing to worry about.

Three months later John B. Leach stood at a case sticking type. He had had a little trouble with his eyes. Suddenly everything went black. He stood there, one hand reached out toward the case, lost. He turned to where, he knew, the sun was shining through a window. Darkness! And then he called one of the two men he employed:

"Take me home." His voice was a whisper. "The balloon's blown up. I'm blind." An oculist, summoned that afternoon, shook his head. The optic nerves had suffered paralysis. Sight was gone forever.

"The next day," Mr. Leach said, "was Thanksgiving. I sat in my new world of darkness, and I couldn't think of anything I should give God thanks for."

He weighed one hundred and forty-five pounds—when blindness struck him. Day by day he sat in a chair at home, thinking of those notes and the mortgage, wondering what was to become of his family. In six weeks his weight had dropped to ninety-eight pounds. He was the victim of depression by day and he could not sleep at night.

"And then," he said, "it came upon me that I, myself, was making it harder for my wife. 'Here,' I told myself, 'you've got to play the man. You're here and you're blind. You've got to make the best of it.'"

Next day his wife guided him to the office. She took him through the plant, and told him what she saw. He leaned in his two men and questioned them. The place was demoralized. But the mere act of trying to do something was better than moping at home. He stayed two hours at the shop.

Next day he stayed three hours. Visualizing in his mind what conditions were from what he was told, he began to give orders. He needed a secretary, someone who could give him eyes. He found one. But the shop was not making enough money to pay its two men. Adding to the pay roll seemed suicide. Mr. Leach's friends decided to buy him a cigar stand.

"You can pay us back later," they told him.

He shook his head. "No cigar stand for me. I'll do a dollar's worth of work for every dollar I get. I won't have people saying, 'Come on; let's buy some cigars from Blind John and help him out.'"

He stuck to the printing shop. By and by he was staying there eight hours a day. The balance sheet, kept by his secretary, showed that he was on dangerously thin ice. He undertook a campaign to get some printing jobs that were in the

One day, when John B. Leach, of Salamanca, N. Y., was sticking type in a print shop, which he had recently bought on mortgage and notes, he turned to an employee and said: "The balloon's blown up! I'm blind! Take me home!" He went home. Though his sight never came back, Leach did. The accompanying article tells of his struggle after the dark disaster—how he not only salvaged his printing business, but founded a weekly newspaper of which he is both editor and publisher

market. It was a case of more work, more profits, or the business would be in the hands of the sheriff. He wrote letters. They were selling letters written in the pinch of desperation. They landed the jobs.

He was gaining ground, but not fast enough to outstrip the debts that had been gathering. One day, face to face with disaster, he walked into a bank to apply for a loan. He had his balance sheet. He had a statement showing how the business had been developing since he

had brought his sightless eyes back to it. He would not ask any of his friends to endorse a note; he was afraid it might look like a play for sympathy. He went into the bank standing on his merits as a business man; he walked out with six thousand dollars of the bank's money. The bank had honored his note purely on the ground that he was a good moral risk.

That money put him on his feet for a time. But it is a hard job to struggle out from under a load of debt. Presently he was again in difficulties. This time the hole from which he had to struggle was not so deep; but he felt that the bank could not afford to come to his rescue again. His friends learned of his danger. He needed two thousand dollars. Twenty men, all of them admiring the fight he was making, came to his home one evening and made him a present of two thousand dollars.

"As a present, no," he said. "As a loan, yes." And while they sat there, he signed a note to each man for one hundred dollars. Less than six months afterward he began to pay off those notes.

Salamanca delights to tell of his encounter with the blind man with the organ. Mr. Leach was on his way to the railroad station, tapping in front of him with his cane. A thin-toned organ was sounding ahead. Suddenly the organ stopped:

"Hello, blind man," cried a voice. "What are you doing for a living?"

The two blind men, by organ note and by tap of cane, found each other.

"I'm running a printing shop," said Mr. Leach.

"Where were you last winter?" the organ grinder asked.

"Right here."

"Cold, wasn't it? I," said the man with the organ, "spent last winter at Los Angeles. The winter before that I spent in Florida. How much do you make printing?"

Mr. Leach told him.

"You fool!" cried the grinder. "Throw it away and get an organ."

"You're the fool," said Mr. Leach.

To-day the printing plant is practically free from debt. In 1919 he started the Salamanca "Enquirer," a weekly. He is practically the whole newspaper.

He gathers his own news on the street, writes his own copy, forms his own conceptions, and writes his own editorials. Last winter he bought the two-story brick building in which the plant is located.

"My advice to the blind?" He was silent a moment. "Keep away from the sympathy stuff. Be a normal man. Give the man you're dealing with a dollar's worth for a dollar, and you've got all the best of the bargain."

WILLIAM HEYLIGER

SOUP MAKES THE WHOLE MEAL TASTE BETTER

## *When you should eat vegetable soup!*

Really good vegetable soup is a splendidly filling and hearty dish. It appeals most when you are more than usually hungry. After a good day's work, following vigorous exercise in the open air, or at the midday meal it is both nourishing and stimulating.

Campbell's Vegetable Soup is real food, tempting to the appetite and rich with sustaining, healthful nourishment.

Fifteen fresh garden vegetables. Big barley grains. Alphabet macaroni. Broth of choice beef. Tasty herbs and seasoning. Thirty-two different ingredients combine to make Campbell's Vegetable as wholesome and satisfying a soup as you can place on your table.

**21 kinds      12 cents a can**

My game of golf is something classy  
I wield a fearsome, wicked brassy  
And when I've laid them all a stymie  
Straight home to Campbell's Soup I hie me!

# Eva Le Gallienne—The Story of a Stubborn Girl

(Continued from page 19)

although they usually call it "determined," or "strong-willed," or something else that is pleasant-sounding.

It is characteristic of this extraordinary girl that she does not pick out pretty phrases in which to describe herself, but does it with an uncompromising honesty.

When she returned to London, she already had made up her fourteen-year-old mind that she was going to be an actress. Also, her idea was that if you *are* going to be an actress, why not begin? It seemed a good idea; but it differed by about six years from the one her mother entertained on the subject; which was that the age of twenty would be quite early enough for her daughter to go on the stage.

Perhaps this was one time when the girl *was* sulky—if she ever was. For she had to submit, and she didn't want to! But the period of enforced waiting was unexpectedly shortened by the war, which practically wiped out her mother's income and provided the young girl with a bread-and-butter argument which couldn't be disregarded.

At that time she was attending a dramatic school in London. She had been there only a few months when Lyall Sweete, a theatrical producer, happened to visit the school, saw her at work, and offered her a small part in a play he was going to put on. Forced by circumstances, her mother consented; and at sixteen Eva Le Gallienne made her first stage appearance as a little cockney in "The Laughter of Fools."

For a girl so young, and with absolutely no experience, to be given an opening without any effort on her part was a bit of uncommonly good luck. But luck is always an uncertain quantity. In this case it lost no time in turning its back. And then, having reversed itself from good to bad, it seemed determined to stay that way indefinitely.

"WHEN the play had been running a few months," Miss Le Gallienne said to me, "the Zeppelins began coming over London and dropping bombs. So the theatre closed and I was out of a job. That was the beginning of a program which lasted several years, and which consisted largely of a monotonous repetition of that same phrase: 'Out of a job.'"

"That time, however, I thought I had another one very soon after the Zeppelins robbed me of my first one. David Belasco bought the American rights of 'The Laughter of Fools,' and I came to New York to play the part I had taken in the London production. But after a few rehearsals of the piece, Mr. Belasco changed his plans, decided not to produce it—and I was left stranded.

"I had no contract with Mr. Belasco. He hadn't even seen me. He does not go to the first rehearsals of a play; and this one was dropped before it reached the point at which he would have taken personal direction of it.

"Of course I received no money for the time spent in rehearsing. The custom is for actors to rehearse four weeks, if necessary, without pay. Perhaps I ought to

have been glad that I didn't lose more time than I did. But every day counted, for I had an appallingly small amount of money on which to keep going.

"That was literally what I had to do," she said, with a rather grim smile. "I had to 'keep going'—from manager to manager, from agency to agency—an experience so discouraging, so heart-breaking, that no one can understand how hideous it is except by actually going through it.

"I said I went from manager to manager. But I almost never *saw* a manager! I saw only office boys and telephone girls.

"BUT finally, I was offered the part of a negro maid in a play called 'Mrs. Boltay's Daughter.' You can imagine how much I knew about negroes. I'd never even seen any of the American variety until I came to New York. Of course I didn't know their accent or dialect. The only thing I did know was that I *must* have a job! I would have played an Eskimo, or a Hottentot, or anything else. So I took the part.

"I took it, as I took the other parts that came later, because I simply had to have a part—any part at all! But it was the best thing that could have happened to me. What every beginner needs, more than anything else, is experience. It is the only way he can learn. And the wider the range of his experience, the more he can learn.

"I had only one objection to being a colored maid, and that was on the score of cleanliness. 'Blacking up' is a messy business. I hated it.

"But what I hated worse was the fact that I had to give it up so soon! The play lasted only ten days; and then, for the third time, I was out of a job. I received fifty dollars for the ten days, with all the rehearsals thrown in. That's less than the 'extras' receive in the moving pictures.

"Next I heard that William Harris was going to put on a play called 'Bunny,' by Austin Strong, and that they needed a girl to take the part of a little English cockney. I hurried down to their office and was engaged. My fortunes seemed to be picking up, too; for 'Bunny' lasted two weeks, which was four days longer than 'The Laughter of Fools' had done.

"For days and weeks nothing happened, until finally one manager showed a glimmer of interest by asking if I could speak an Irish brogue. I hope the Recording Angel wasn't listening when I said I could. If anyone had asked me whether I could speak Choctaw, I probably would have said I learned it at my mother's knee. For I *had* to have that part.

"I'm glad it didn't happen to be Choctaw, but an Irish brogue instead, for they actually gave me the rôle. The play was 'The Melody of Youth,' by Brandon Tynan. And I don't think my brogue was so very bad either.

"The play ran four months in New York, four months of blessed exemption from the need of haunting the managers' offices! Then it was taken off—and I was out of a job once more.

"But I was gaining experience, even if I wasn't getting much else. And the ex-

perience was beginning to count. For as a direct result of my work in that piece I got the chance to play my first good part. This was in 'Mr. Lazarus,' a play in which Henry Dixey was starred. It ran three months in Chicago, was taken to New York—and lasted there only four weeks.

"Let me see! That was the sixth time I was out of a job. But I wasn't through yet. Next, I got a part in 'Mile-a-Minute Kendall,' which Oliver Morosco put on. Up to this time, my enforced vacations had come only when the play itself was taken off. Now I had a new experience: I was fired! Yes, just plain fired. My only consolation is that Donald Gallaher, who was playing opposite me, was also fired. And he is a good actor.

"That was my seventh 'out of a job,' in about three years. It began to look as if I would go on, to seventy times seven.

"And of course I was hard up. More than half the time, since I had come to this country, I had been out of a job. One can't save money under those conditions. So I still was forced to take anything I could get. I *wouldn't* be dependent on others! That has been an obsession with me ever since I can remember.

"WHEN I was a child in Paris, it bothered me to know that my mother was working to take care of me and to give me an education. So I used to make things: practical, useful things which we needed. Then I sold them to Mother and used the money to help pay my expenses. It wasn't that I wanted money to spend for 'extras.' It was simply that I felt then, as I feel now, that I hated to be a parasite.

"People talk about 'the right to live.' It doesn't seem to me that *anyone* has a right to live, without in some way paying for that right. A person who does none of the world's work, who takes everything and gives nothing in return, is a parasite; a debtor who won't even try to pay his debts. Nothing seems to me more contemptible than that.

"I had to go on working, if I was to pay my way. So, after being fired from 'Mile-a-Minute Kendall,' I took the first thing I could get. It was what stage people call 'a bit,' a very small part in 'Lord and Lady Algy.' I had only ten lines to speak in the whole play. It was decidedly a come-down, after having had a leading rôle in 'Mr. Lazarus.'

"But it all worked out for the best. I never have regretted for one moment *any* of the things I had to do. Necessity is a stern teacher, but a good one. And she is sometimes unexpectedly generous. Necessity forced me to take that little ten-line part. But it happened that Ethel Barrymore went to see the play. She had seen me in 'Mr. Lazarus.' And when she found me doing that insignificant bit she was so sorry for me that she got the manager to release me from my contract. She gave me a very good part with her in 'The Off Chance' and later another good rôle in 'Belinda.'

"But when my second season with her came to an end, there I was, metaphorically, chanting my old refrain, 'Out of a

job! And it was as imperative as ever that I should have one. I got a part in 'Lusmore,' an Irish folk-play which I loved; but the public didn't seem to share my affection, and it soon failed.

"How many 'out-of-jobs' does that make? I've lost count; but it doesn't matter. Next I was engaged for 'Tilly of Bloomsbury,' but it wasn't to be produced until eight weeks later. Meanwhile, Elsie Janis—whom I knew personally—was putting on a revue. Off the stage, she and I had often danced together. So she asked me to do a dance with her in this revue while I was waiting for 'Tilly' to begin.

"I never had danced on the stage, and didn't think I could. But it would be fun to be with her—not to mention the fact that I would be earning money! So, for four weeks, I was a French *cocotte* and danced with Elsie Janis.

"Wasn't it all a curious *mélange*?" said Miss Le Gallienne, with an amused smile. "I had been a negro maid, a cockney, an English aristocrat, an Irish peasant, several types of American girls, and now a French *cocotte*. All within the space of a few years. If I hadn't been forced to take whatever came along, I should have been vastly the loser.

"Well, next came 'Tilly of Bloomsbury.' But my appearance in that was almost as meteoric as some of my previous ones, for I had pneumonia, and that cut short my engagement.

"I was twenty years old by this time; I had been out of a job, off and on, for four years. I had taken my medicine with as good a grace as I could manage; and it had done me good in more ways than one. But now, apparently, that particular kind of treatment was over—at least for a while. I played a successful engagement in 'Not So Long Ago.' And then came almost two years in 'Liliom.'

"I don't have to haunt the managers' offices now," she said, with a rather cynical smile. "I have been asked to come to some of the very ones where I used to try vainly to gain admission. Not that I have the slightest cause for resentment!" she added quickly. "I had to *earn* my right to be given even a chance to work. The right to work, as well as the right to live, is something that must be paid for. It is nothing but a charity, if it is not earned."

"What was there," I asked, "that helped you most in achieving your own right to work?"

"OBSTINACY," she said, after thinking it over for a moment: "The stubborn determination to get what I seriously wanted. If I make up my mind to have a thing, I never give up until I get it.

"When I was fourteen years old," she went on, with a reminiscent laugh, "I wanted a copy of Sarah Bernhardt's memoirs. The book was out of print, and I couldn't find it in any of the shops. But I knew an old gentleman who owned it, and I asked him to loan it to me, explaining to him that I would copy it with my own hand.

"He laughed at me. It was a good-sized volume; and he declared that I never could, or would, copy all those thousands of words. Mother said the same thing. So did everyone who heard of my wild scheme. But I was determined to do it!

"As I couldn't afford to buy paper of

good quality I got some very cheap tablets and started in. It took me eight weeks to finish the work. I covered eight hundred pages about eight by ten inches in size. When I had finished it, I took the great pile of manuscript to the man who had loaned me the book.

"You told me I never would finish this," I said. "Well, here it is!"

"He was so impressed," she laughed, "that he told me to have it bound in any way I wanted and to send the bill to him. So all that cheap paper, covered with my childish handwriting, was bound in two large volumes. Bernhardt herself was told of my exploit and wrote me a charming letter, which was bound with the manuscript."

"WHAT became of the books?" I asked. We were sitting in the little study of Miss Le Gallienne's New York apartment. The windowed door opened onto a roof which served as a porch and I could see the partition which she had built with her own hands. English ivy, growing in the porch boxes which she had painted, covered the brick wall of the adjoining house. The tiny study was lined with bookshelves. There were rows of wonderful old volumes, their leather bindings dark and rich with age. That is the sort of thing for which this girl spends her money—now that she has some to spend.

When I asked her what had become of the Bernhardt memoirs which she had written out, she took two large books from these shelves and handed them to me. They were amazing proof of her patient persistence in getting what she wants.

She may call it obstinacy, if she likes. But it is more than mere obstinacy. That, usually, is negative. It is what makes the mule plant his feet solidly and refuse to budge. Obstinacy doesn't imply action. It is a *refusal* to act. But Miss Le Gallienne is positive; not negative. She doesn't refuse to move. She *insists* on moving. She said that if she wants a thing she never gives up until she gets it. But she doesn't sit down and wait for chance, or fortune, or luck to bring it to her. She goes after it. That kind of obstinacy is not mulishness. It is the greatest motive power in the world.

And now about her breakdown last summer. To explain that, I think, is to explain her as an actress.

The theatrical profession is divided into two clans: Those in one clan believe that the actor should really feel the emotions he is to portray; that he should *live* the part. Those in the other clan believe that it is a matter of technique; that the actor should *not* lose himself in a part; that he is an artist painting a picture; that his implements, so to speak, are tones and gestures and facial expressions; and that he is simply to use these tools with careful calculation of the effect.

An actor's temperament, or personality, seems to decide in which of these two clans he shall belong. Eva Le Gallienne is in the first one. This does not mean that she despises careful technique. But it does mean that in a rôle like that of Julie in "Liliom" she really lives the part. I have sat in her dressing-room during a performance of the play and have seen her come in after the different scenes: a somber, tense figure. Even there, she still seemed to me to be "Julie."

The play ran for ten months in New York. And eight times a week, during all those months, she lived through Julie's tragedy. The result, it must be admitted, is an argument in favor of the theory that an actor should not be swept along by the emotions he is portraying. When "Liliom" went to Chicago, Miss Le Gallienne had begun to feel the strain.

"At night," she said, "I would stagger to the theatre. After the play, I would stagger back to the hotel. Then I began fainting when I came off the stage after the fifth scene. The third time this happened, they carried me to my dressing-room; and when I came to I couldn't walk. That ended it. They put me on the train and I came back to New York. At the station here, two porters half carried me to a cab. As soon as I was able to travel I went over to England. The rest and the change put me on my feet again.

"There is one very interesting thing about achievement," she went on, "a rather frightening thing, too. When I first began to work I was supremely confident. If anyone had asked me if I would play 'Hamlet' I should have replied, 'Certainly! With pleasure!' But as you go on you realize the possibilities in your work—and you realize also your limitations. Of course that is necessary to progress. If you don't realize your imperfections, you don't know that there is *need* for you to progress. But it keeps the way from becoming an easy path.

"I think it would be a pity if this wasn't true; a pity if only the *beginnings* of success had the zest that comes with a struggle and a fight. It would be pretty dull just to sit still and have things drop into one's lap."

"TELL me how you study a part," I said. "I have done a good deal of it on the stage. But," she explained, "it was the Fifth Avenue stage! I used to get on a bus and ride for hours; not seeing anything, just thinking of the part I was to play, trying to make it a vivid reality, an actual personal experience.

"I don't even learn the lines. I try to get the *thought* in my mind. When I have done that, the words come spontaneously. I don't plan to make certain gestures, at certain points, to indicate certain emotions. I don't think about my gestures. I feel the *emotion*, and do whatever it makes me do. If you were really angry, you would show it. You wouldn't have to think *how* you could show it. If your heart was filled with a great compassion for someone, you wouldn't have to study yourself in the mirror to find out how to look with pity and tenderness at the person your very soul yearned over. You couldn't *help* showing your feeling.

"I have the greatest admiration for the supreme artists in technique. Bernhardt, for instance, was marvelous. But if I tried to do as they do I should not be an artist, I should be only artificial. One method is natural to one person, but alien to another. It seems to me a fatal mistake to copy another person's methods just because *he* has succeeded with them. People who merely imitate others remind me of flying fishes. Their flying doesn't amount to much, compared with that of the birds they imitate. I'd rather be a success as a fish, than a failure as a fish trying to be a bird."

## PERMANENT ENAMEL BAKED ON STEEL

Eight years ago, when Dodge Brothers originated the all-steel motor car body, they took advantage of the absence of wood in the framework to bake an enamel finish on the surface of the steel.

In a vast series of electric ovens, especially designed and built by Dodge Brothers' engineers for this process, three distinct coats of black enamel are successively baked on the steel at an intensely high temperature.

The result is a finish so hardy and durable that it seldom requires more than a good cleaning and polishing to restore the original brightness.

Even in sections of the Southwest where alkali in the soil is especially destructive to body finishes, Dodge Brothers enamel retains its beautiful lustre after years of wear.

# Human Nature as Seen by a Station Master

(Continued from page 65)

bundles and one of her youngest in my arms, I led the way. The mother, who was easily capable of handling four to my one, kept close behind, leading two by hand and shooing two in front. We didn't delay the train more than twenty seconds, and if the other passengers on that train had seen the look of relief on the face of that woman as she and her children went through the gate, they would have been willing to wait an hour.

ON ANOTHER occasion some time ago I held up for a belated passenger a train carrying no less a personage than the President of the United States. I was crossing the concourse just after coming from the tracks on which the President's special had pulled out, when I saw a man—obviously in a bit of a hurry—who, I knew should have been aboard that train. It was the Secretary of War. It happened to be a very hot day, however, and the secretary had left the President's party to get an ice-cream soda.

"Am I going to make the President's special?" he asked hurriedly, as I approached him.

"Maybe you can," I said; "but it means hustling. The train has gone and is half way under the river by this time."

"Then how can I make it?" he asked.

"Come along!" I cried, and away I ran, followed by the Secretary of War. On getting to a telephone, I called the Manhattan Transfer—a junction just across the river in New Jersey—and ordered the President's train to be held. Then, from the nearest point, Tower A, I ordered out an engine for the Secretary of War, who boarded it and was thus transferred a few minutes later to the Presidential train, which then proceeded on its way.

A youngster of five was sent to my office by a woman who lived in Hackensack, New Jersey. I had agreed to hold the boy until his father could come and take him to the dentist. Hardly had the boy arrived when in came a wild-cat. This particular cat, a bob-cat, had been presented to Marshal Foch during his visit to the United States by the Montana delegation of the American Legion Conference in Kansas City. It had arrived in New York after a twelve-hundred-mile journey by airplane, and as the marshal was not quite ready to receive it, I was asked to extend hospitality.

The only trouble I had that afternoon in entertaining these two guests was in keeping them apart. Not that the bob-cat paid much attention to the child—it was harder to keep the child from getting too near what the bob-cat had by way of a tail! I was never so thankful to see a youngster go on his way to the dentist as I was that youngster.

The bob-cat remained with me for the better part of a week, feeding on bread and milk, and remaining tied to the radiator by the window. Sitting upon the ledge of this window he seemed fascinated by the crowds going to and fro, until finally arrangements were made to keep him at the New York Zoo pending the return of Marshal Foch to France.

The Pennsylvania is one of the largest railroad terminals in the world. It was used last year by more than 36,000,000 passengers. Not all of them—I should hope not!—have occasion to come to my office; but many of them do and for a great variety of reasons.

Some come to ask me to look up their missing relatives. Others, who have lost their pocketbooks, come to borrow enough money to get home with.

A good many women who live within a hundred-mile radius of New York write in quite frequently requesting me to send them samples of dress goods, cretonne, linoleum, and other materials. Some of the customers for whom I act as "buyer" order flowers, and others have me send them a certain brand of candy which is made in New York and is not on the market in other cities. For out-of-town patrons of the road I often arrange for hotel reservations, theatre seats, and for appointments with doctors, lawyers, or dentists. And it is nothing unusual for me or one of my assistants to go to the dock and look after the mother, wife, or fiancée of some business man in Philadelphia, Buffalo, or Chicago, who has found himself unable to meet the incoming ship from Europe.

IT'S a pleasure to be able to help people when they appreciate anything you can do for them. Like anybody else, a station master finds his joys in such incidents. But when the fellow who has let himself be irritated without reason and whose feelings are hurt into the bargain appears—then come the station master's sorrows.

The most unreasonable man I have ever had to deal with was not one who had lost his bankroll or missed a train. He had lost merely his umbrella.

A few months ago a woman with three children, who had come on from Texas to join her friends in a small town in southern New Jersey, told me with tears in her eyes that all her money was gone save a dollar and a half. She had been under the impression that the place she was going to was a part of the metropolis; but now she realized that she needed six or seven dollars more to get her to her destination.

She was not well dressed, and anyone could see that she had been a hard-working woman all her life. I provided her with the necessary transportation, feeling sure that she would reimburse me; and I was not disappointed. Six weeks later she wrote saying that she had found work in a factory packing medicine vials. Out of the first money she had earned, she was returning the sum I had advanced for her. Of course I felt like sending it back to her; but before I got a chance to do that another woman presented a somewhat similar case of distress, and I advanced the money to her.

I find that well-to-do people who, in an emergency, borrow small sums from me or some station attendant, are much more likely to forget to pay back their debts than poor people. A month ago, a girl who was dressed in very expensive furs and silks told a station attendant that she

had lost her pocketbook, and asked the loan of a dollar to get her to Long Beach. She took the attendant's name and address, promising to return the dollar as soon as she got home; but the attendant hasn't heard from her yet, and I doubt if he ever will. This girl doesn't mean to be dishonest, but is simply thoughtless. She has no idea that by failing to return the small sum of a dollar she may be depriving someone else of a similar accommodation in time of need.

I must tell you of another instance in which one of my men advanced money to a "penniless" passenger; but in this case he got it back, and quickly, too. An old man leaning on a heavy homemade walking stick went up to this attendant and said:

"I've walked all the way from the upper part of New York State on my way to Sag Harbor, Long Island. It was twenty years ago I left Sag Harbor after a quarrel with my son. I'm going back now to see him once more before I die; but I don't feel as though I could walk the rest of the way."

The old man, a veritable picture of Father Time, looked as though he had been traveling the highways for ages, and the attendant's heart was touched. He bought the man a ticket for Sag Harbor at a cost of two dollars and eighty-five cents. Then he took the man to the station restaurant and filled his pockets with sandwiches.

As the sandwiches were being stuffed into the old man's pockets, a wallet slipped from one of them and fell to the floor with a flop. Quick as a flash the attendant reached down and grabbed it. On opening it, he discovered a lot of dirty one-hundred-dollar bills. Right there before the old man he counted them, eighty in all—eight thousand dollars! And, in spite of the man's protest, he made him break one of the bills and return the price of the railroad ticket and sandwiches—a perfectly proper proceeding, to my way of thinking.

I DON'T feel that I am called upon to admit that the most incredible incident that ever occurred in the station was a woman's kissing me on the cheek. This actually happened not so very long ago.

That day I was passing a gate through which had just come the last passengers from a train from the West. Seeing that someone had dropped an old flour sack, which was apparently stuffed with clothing, I picked it up and looked around for the owner. Some distance away I saw a very excited group of people, and later learned that they were Poles on their way from Montana to their native land. They were gesticulating and looking about wildly. As I went toward them a woman held out her hands toward the flour sack. When I held up the sack, she let out a cry and grasped it in her arms. Then she passed the sack to one of the men in the party, and threw her arms around my neck and kissed me! Why the big demonstration? It was simply gratitude. The flour sack contained the party's joint wealth—\$38,000 in good United States bills!

# Men Quit

*their shaving creams for this—  
Millions of them—the world over*

Gentlemen:

Do you realize what has happened in the world of shaving creams?

Three years ago every man who shaved had his own favorite soap.

Then Palmolive Shaving Cream was perfected, and we offered a ten-shave test.

Millions accepted it. Tens of thousands took the pains to write us thanks for making it.

And now Palmolive, we figure, is saving men some ten years every morning.

## *Took a lifetime*

But Palmolive Shaving Cream was no sudden creation. We who made it have spent our lifetimes in soap study.

For 60 years this laboratory has been per-

fecting soap. One of its creations—Palmolive—is the leading toilet soap of the world.

We asked 1,000 men what they most wanted in a shaving cream. They agreed on five requirements, and we set out to meet them.

## *130 attempts*

Despite our skill, we made up and tested 130 formulas before we met men's ideals.

Some said these things were impossible, but we kept on. And in 18 months we had the shaving cream we offer you today.

Now we ask a ten-day test from every man who shaves. This shaving cream will amaze you. It will change your whole conception of what shaving cream can do.

You owe to yourself, and owe to us, this delightful test. Make it now.

THE PALMOLIVE COMPANY  
Dept. B-418 Milwaukee, U. S. A.

The biggest sum ever lost in the Pennsylvania Station was about \$60,000. The wife of a business man passed through on her way to a train for Baltimore, where she was going to visit friends. She carried a bag with gold trimmings, in size about twelve inches by six. In the bag, she had twenty \$1,000 bills and five or six \$100 bills. In addition, the bag contained her jewel case with jewels valued at \$40,000. She dropped the bag in the lobby, and without being aware of her loss went on through the gate to her train.

By the time she had discovered the loss of her bag, the gate was closed behind her. She came back and found it fastened. Just then she saw an attendant, who had picked up her bag and was bringing it to my office. With a cry, she shook the gate, but it could not be opened quickly enough for her. She climbed right up and over the ten feet of fence and ran to the attendant, crying, "That bag is mine—mine!" And when the attendant said, "You can have it, madam, by identifying the contents," she broke down and cried.

**SINCE** the time of President Cleveland I have been in charge of the station arrangements for the arrival of all our Presidents on occasions when they have been coming from or going to Washington. Usually, when the President is coming to New York I am notified in advance by the White House. When his train comes in, it is my duty to be on hand with the Secret Service men.

The President's private car is always shifted to the track which brings him nearest the elevator that connects with the main level. From this level he walks to the automobile entrance on Thirty-first Street, properly guarded, of course, by the police, for there is usually a big crowd on hand to greet him.

The biggest crowd I have ever seen in the station was when President Wilson took a train for Washington after his return from the Peace Conference at Paris. The station was jammed and the streets outside were packed with more than twenty-five thousand persons. Next to this the biggest crowd that has assembled in recent years was the multitude that greeted De Valera on his return from Washington. Of all the famous men I have met in the course of my duties, Theodore Roosevelt, more than any other, relished finding himself in the midst of an enthusiastic throng.

I used to think that no man whose photographs had been carried in the newspapers as often as those of Theodore Roosevelt could fail to be recognized wherever he went, but some years ago I had a complete demonstration that this idea was not well founded. You might call the story I am going to tell you now "Twenty-five minutes in the life of Theodore Roosevelt, Commuter," for on this occasion he was neither ex-President, "Colonel," nor world-famous American, but just an ordinary traveler who had got to the station a little ahead of train time.

One day back in 1912, when Colonel Roosevelt was in the public eye as the founder of a new party and when enormous crowds were greeting him at each of his publicly announced appearances, he left his office in New York and came to the station to take a train for Oyster Bay. As he passed between the huge columns at

the entrance, he saw a group of men and women gazing intently upon two monumental tablets at the left and right. He stopped, joined them, read the inscriptions—and passed on—his personality unnoticed.

Then he entered the long arcade, flanked on both sides by shops, and, after covering twenty yards, stopped again, his attention having been arrested by a display of grapes, oranges, and apples. He went into the shop and quickly made a purchase of what struck his fancy. To my astonishment, when the salesman was later asked if he knew on whom he had waited, he said he did not.

Down the arcade a little way, the colonel halted again in front of a bookshop, looking at the display of the latest fiction, history, and nature books. A boy of ten pushed in between the colonel and the window, jostling the colonel violently. But the colonel never took his eyes off the books.

When he had passed all the shops, it seemed that the colonel would hurry for his train, but, instead, he acted like the usual commuter with a little extra time on his hands. At the head of the main stairway leading to the concourse, he paused, studying the multitude below. Then he compared the time of his watch with that of the fifteen-foot railroad clock, and turned his eyes to the left, where he studied the big bronze statue of Alexander Johnston Cassatt, the late president of the Pennsylvania and once an intimate friend of the colonel's.

Presently, he went down the twenty-odd steps to the waiting-room level, but made only a few strides before he discovered that the lace of his shoe had become unfastened. Passengers were scurrying in every direction, but not one of them sent a glance toward the ex-President fastening his lace.

On reaching the concourse, the colonel started full speed for his train, for it was due to leave in a few minutes. But he changed his course again, and went to a news-stand, where he bought an evening paper and two magazines. A few steps away from the news-stand a little girl of five or six was looking longingly at the counter piled high with sweets. The colonel bought a ten-cent cake of chocolate, put it in her hand, and moved hastily toward his train.

And now he stopped again and went back to the news-stand! Like all the rest of us when we are traveling, with our minds on everything but our parcels, he had forgotten his fruit, papers, and magazines! Having recovered these, he turned and started for his train on the run. With the fruit in one hand and his literature in the other, he sprinted some two hundred yards, and crossed the finish line none too soon. He was next to the last man through the gate before it was slammed shut!

**FROM** my experience I may be able to give some suggestions that will be of use to travelers who want to save themselves trouble and inconvenience. And what I say here applies to conditions in the big railway station in any part of the country.

Remember, upon your arrival at a station, that it is a poor plan to do business with any but uniformed men. Don't ask questions of anyone else. Get the information you need about the city you have

just come to *before* you leave the station, so that you will not have to consult people outside. It frequently happens that men following illegitimate pursuits linger about the vicinity of a railroad station in the hope of meeting some unsuspecting arrival, whom they may try to cheat in any one of a dozen ways.

A similar rule applies when you plan to depart from a railroad station. Transact your business inside with the proper officials. Don't buy your tickets of anyone who accosts you outside the station. Don't entrust the money for your fare to someone who offers to buy your ticket for you. That is invariably the device of a cheat, who will pocket your cash and disappear.

There are two hundred and thirty-five regular porters employed at the Pennsylvania Station. These men are paid by the railroad company. They are not allowed to set any definite price for assisting a passenger with his luggage, but they are allowed to take whatever the passenger offers, or nothing.

When you give your bag or bundles to a porter, be sure to take his number. Few people do this, but if you have any complaint to make it is often the only way the matter can be traced.

Persons who are arriving in New York and are unfamiliar with the city—elderly people, women with children, persons going abroad—these and others who may need some special arrangements for their convenience and safety, should let the station master know by letter or telegram of the time of their arrival. Arrangements will be made, whenever desired, to transfer passengers who arrive by the Pennsylvania to any other station for the continuance of their journey.

Remember when you notify the station master of the time of your arrival that the attendant he sends to help you will not know you by sight. Give the identifying number of your car and reservation.

**PEOPLE** who find it necessary to send children to or from New York without adult companions ought to make arrangements in advance by a letter to the station master. Not infrequently, we are asked to send a child clear across the continent in the custody of railroad employees. We can arrange to see to it that the juvenile passenger changes cars at the proper points under the supervision of station masters en route. Recently, I arranged to send a boy of nine years all the way to San Francisco. Before he left, his parents gave him a diet list, as their real concern for his welfare was lest he eat too much. Under the supervision of our dining-car chiefs, he was kept strictly to his stipulated diet, and crossed the whole continent without one stomachache.

One thing I would like to impress upon everyone: Whether on a train or in a station, take great pains, when you pick up a bag or suit case, to be sure that it is your own property, and that you are not exchanging bags with someone by mistake. Women should take especial pains in identifying their black patent leather suit cases. Cases of this kind are more frequently exchanged than any other, because they are so nearly alike.

Finally, I would suggest that anyone who finds himself in trouble in a railway station, or in need of special travel assistance, ought to consult the station master.

Mother—"Dear me, I wonder if it will be raining at the lake today?"  
 Father—"Never mind, dear, we can put up the windows in a jiffy."  
 Frank—"Yes, and we are sure to get through with a Jewett."

## This Year-Round Jewett Pleases All the Family

*Comfort That Defies Weather—Performance To Be Proud Of*

**J**EWETT Sedan is breezy and cool on hot days. All side windows lower, as illustrated. You enjoy all the "openness" of a touring car. In the dusty stretch or sudden storm, raise the windows and you are just as snug and clean as at home. Lock the doors and luggage is safe.

When Jack Frost comes, this Jewett Sedan is doubly prized by all the family. With windows closed tight—they do close tight—you are comfortable on the bitterest days. You will go out oftener, keep in closer touch with your friends, really *use* your car.

But Jewett Sedan gives more than weather comfort. With the longest springs of any car its size—and costly, deep seat cushions—it defies rough roads. Its rugged construction—Jewett is 200 pounds heavier than comparable cars—gives big car riding ease. It is finished, fitted and built to please and endure. Slam the doors. The sound bespeaks substantial worth.

Jewett Sedan is known as "the closed car with open car performance," due to the spirit of its 50-horsepower motor. Pass any car on any hill. Jewett Touring cars accelerate from 5 to 25 miles an hour in 7 seconds. The Sedan does nearly the same. Drive it from 2 to 60 miles an hour on high. You rarely change gears. When you do, it means a bare 3-inch movement of the lever. Do it fast or slowly—there's never a "miss" nor a "clash." Women prize the Jewett for its easy handling.

Jewett's mechanism in every particular, stays good. Jewett is the only Sedan around \$1500 made by a builder of high-grade cars. Paige-Timken axles front and rear. Paige-type clutch and transmission. Paige-built motor. Sturdy 6-inch frame. It is a car to be proud of—an economical car for long, hard, satisfactory service. Arrange with the near-by Jewett dealer for a family demonstration in this year-round Jewett Sedan.

**PAIGE BUILT**

Every ScotTissue contains millions of soft Thirsty Fibres, which absorb four times their weight in water. They make ScotTissues the quickest-drying, most satisfactory towels made.

Don't confuse ScotTissue Towels with harsh non-absorbent paper towels. Remember, it isn't Thirsty Fibre unless it bears the name ScotTissue.

## Instantly - Thoroughly - Safely

Each fresh, soft white ScotTissue Towel you reach for, contains millions of thirsty fibres that jump at your touch—that suck up all trace of clinging moisture from your hands—and leave a feeling of refreshing cleanliness.

It's so surprisingly easy and economical to enjoy this clean, wholesome ScotTissue Towel Service in your office. It's such a comfort to know that there is a fresh, dry, never-before-used towel waiting every time you need a towel.

Begin today using ScotTissue Towels. Buy a carton of 150 towels. They're only 40 cents (50 cents in Canada) and even less by the case of 3750 towels. Your stationer, druggist or department store can supply you. Or, we will send (prepaid) the towels or \$5 outfit, upon receipt of price. Try the Handy Pack of 25 towels, 10 cents.

## My Hobby—And Why I Recommend It

### FIRST PRIZE

#### "A Natural Craze for Earning"

I MOUNTED my hobby at the age of ten years, just because I had a natural craze for "earning." I wanted to earn everything I got. Spring evenings after school, I gathered green fallen apples from the ground for my brother to feed to his pigs. By picking a few off the tree when no one was looking I managed to fill a sack once a week, then I had earned a nickel; sometimes my brother paid me, more often he didn't, which seemed to increase my craze; but the nickels I did get I clung to most desperately.

I lost myself in "free" advertisements which required only a few hours' work of an industrious youngster's time to win small but very worth-while prizes. I earned a beautiful blue willow set of dishes for my mother's Christmas and things for myself.

Another time a medicine show came to our town, and as an advertisement several children were asked to enter a wood-sawing contest. There I earned a dollar, which started my bank account.

Then I got a real job in an office, where I was paid sixty-six cents for a thirteen-hour shift on Sundays. About that time a newspaper campaign started, and to the contestant securing the most subscriptions a fine car was to be awarded. On week days, when my office hours were shorter, I worked noons and evenings in the contest, and after three months' time I overwhelmingly won the car, which was my greatest victory up to that time in the way of earning.

I now have an executive position, where I earn all the things I need. I attribute my success to-day to the ability I had, and still have, for earning, and there are few who are more successful. I still have various side issues that I handle in my own way and keep my hobby horse galloping. My family think it great, and I sometimes surprise them by earning some gift for them. I would certainly recommend it to any boy or girl, man or woman, for it is the greatest developer of perseverance, will power, and conservatism; it is the person who earns that does the most toward making this old world go ahead.

M. E. R.

### SECOND PRIZE

#### Recording Trips by the Camera

I WILL write about one of my husband's hobbies; he has several, and all of them interesting. This particular one is taking pictures.

Before we were married he hunted with a shotgun for ducks, geese, and quail. He still hunts, but has changed his weapon:

# Pleasure Island

## Romance in Chocolates

Plunder from the Spanish Main! Modern treasure ships bring back from those tropic isles sugar, spices, vanilla, chocolate, nuts and fruits. The charm of far-off, forgotten shores and storied seas is expressed in this pirate's chest of delectable sweets. The very fragrance of the opened box prepares one for the feast in store.

Delving into the treasures is a delight to any candy lover. Beneath the top trays of unusual chocolates are money bags filled with gold and silver wrapped pieces, the finest coinage of the candy maker's art.

And then as you settle back to revel in these luxuries, here are the Whitman's masterpieces you will find:

Majestic, Mincy Mallow, Plum Pudding, Temptation, Messenger, Mellowmint, Fancies, Milk Coconut Cream, Cocoanette, Pecan Marshmallow, Double Walnut, Jordan Almond, Filbert Clusters, Liquid Raisin, Liquid Pineapple, Liquid Cherry, Amaracene, Milk Chocolate Blossoms, Peanut Carmel, Marshmallow Block, Dollar Mints, Honey White Nougat, Brazil Nut and Fudge-Marshmallow.

Truly a treasure-trove is this picturesque package, so reminiscent of the brave tale of Robert Louis Stevenson!

"Pleasure Island" is sold by those good stores selected as agents for Whitman's. There is one in your neighborhood.

STEPHEN F. WHITMAN & SON, Inc., Philadelphia, U. S. A.

*Also makers of Whitman's Instantaneous Chocolate, Cocoa and Marshmallow Whip*

## Rugs "like new" after 14 years

"Come over and see my rugs!" That is the invitation which Mrs. C. B. Squires of 1010 Wethersfield Avenue, Hartford, Conn., extends to any misinformed friend who tells her a Hoover takes off the nap.

"After fourteen years of regular Hoover cleaning, my rugs are in wonderful condition and look as good as new. You would hardly believe they are fifteen years old. The Hoover has at least doubled their life.

"I never have to have my rugs beaten or taken out to be cleaned, as do friends of mine who own other cleaners. There is no comparison—a Hoover cleans clean."

Over a million satisfied users have made The Hoover the world's largest selling electric cleaner.

On divided monthly payments, a Hoover is soon paid for. Have an immediate demonstration on your rugs—no obligation. Write for names of Authorized Dealers.

**THE HOOVER COMPANY, NORTH CANTON, OHIO**  
*The oldest and largest makers of electric cleaners*  
 The Hoover is also made in Canada, at Hamilton, Ontario

# The HOOVER

*It BEATS... as it Sweeps as it Cleans*

he now takes a camera, and I often go with him. We used to take pictures of nearly everything and have the films developed and printed; but this began to be rather expensive, especially when we passed pictures around to our friends. Then we just couldn't take enough pictures of our first baby, and later of three more children. We have books of most interesting stories without words about them.

When my husband realized what he was missing by having the plates developed, he did this himself, and also the printing.

Now when we come home from a trip he gets right to work, and when we hear "Gee, but I've got a dandy!" we all rush out to see; and we are just as much interested when he prints the pictures to watch the paper put into the chemicals, to see the picture just popping up to us.

In winter, when the evenings are long, we take out our photographs and enjoy our summer trips all over again.

There are stories connected with a great many of my husband's pictures. One most interesting to me is when President Roosevelt came down the Mississippi River with his fleet of steamboats; of this he secured some excellent pictures. I think I can safely say that we have the largest collection of amateur photographs in our city—an illustrated story of our outings for the past twenty-five years. MRS. S. S.

### THIRD PRIZE

#### Thinking Pleasant Thoughts Always

AS THE mother of three children, all under four years old, with little outside diversion, I simply had to create a hobby which would bring happiness to me and to those around me—the hobby of thinking pleasant thoughts.

I recommend it because it will banish envy and discontent; it is a hobby that all can "ride;" it doesn't take up any of our precious time, and it costs nothing.

Before marriage, my brain was fully occupied with my work. I had no time to think about the latest scandal or my neighbor's new machine.

Since marriage and the arrival of the children, I have found that the petty cares of the day soon magnify when you let your mind dwell on them.

Housework, when systematized, doesn't require much brainwork. Neither does the care of children fill the thoughts of one's waking hours.

When my mind begins to wander to Aunt Sarah, who unknowingly slighted me the other day, I hastily recall a good story, and concentrate on that until all evil thoughts of Aunt Sarah disappear.

When the children have been up to all sorts of pranks, and a young woman friend happens in all dressed for the matinee and I wish for an instant that I were in her place, I dream of the fine men my boys are going to be, and am thankful that to me falls the honor of contributing to my country honorable citizens.

I'll wager that if every woman tried this simple help toward happiness our divorce courts would be less crowded and more children would know the joys of a happy home. MRS. M. H. E.

*The Good*  
**MAXWELL**

The human tendency to push a success along to greater proportions, cannot wholly account for the tremendous upward strides the good Maxwell is registering.

Underlying all that the good Maxwell has accomplished in the public view, is an enduring foundation of other things done by way of stabilizing its splendid success.

A solid, financial structure has been built. Good executive management has brought costs under close control.

A strong, substantial, distributing and servicing organization has been built.

Finally, manufacturing has been put on the sound basis of low-cost, high-quality production on a large scale.

The public was told little or nothing of these things.

But it was quick to recognize in the good Maxwell, value expressed in such terms of beauty and quality as it has never seen before; and to award to it, almost over-night, one of the few really great successes in American motor car annals.

Cord tires, non-skid front and rear; disc steel wheels, demountable at rim and at hub; drum type lamps; pressure chassis lubrication; motor-driven electric horn; unusually long springs; new type water-tight windshield. Prices F. O. B. Detroit, revenue tax to be added: Touring Car, \$885; Roadster, \$885; Sport Touring, \$1025; Sport Roadster, \$975; Club Coupe, \$985; Four-Passenger Coupe, \$1235; Sedan, \$1335

**MAXWELL MOTOR CORPORATION, DETROIT, MICHIGAN**  
 MAXWELL MOTOR COMPANY OF CANADA, LIMITED, WINDSOR, ONTARIO

## Nights in June

### Puffed Wheat in milk

Whole wheat and whole milk—two premier foods—made tempting and made easy to digest.

What other night dish can compare?

The wheat grains are puffed by Prof. Anderson's process. Over 125 million steam explosions are caused in every kernel. The food cells are thus broken, so the whole-wheat elements feed.

The grains are puffed to globules, flimsy, flavory, crisp—eight times normal size. So the whole grains are made tempting—airy food confections.

#### Ideal summer breakfasts

The finest breakfast dainty you can serve in summer is Puffed

Rice. These are rice grains puffed by steam explosions. And the fearful heat gives them a nut-like taste. Think what a dish this is—grains as flimsy as snowflakes, as flavory as nuts. Yet a scientific food.

#### More whole grains—more milk

Serving Puffed Grains means more whole grains and more milk—two foods that children need.

Whole wheat supplies, among other things, 12 needed minerals. Millions of children suffer for the lack of some. It also supplies bran.

Serve Puffed Grains all day long, in every way you can. Children will always welcome them, and they'll be better fed.

# Puffed Rice Puffed Wheat

## How Your Handwriting Betrays You

(Continued from page 28)

together with specimens of Grant's handwriting and of papers known to have been written by Olaf Wick, the missing Swede.

"Comparison of these specimens showed that Grant had written the relinquishment himself and had forged the checks. He had tried to disguise his writing and to imitate the Swede's. But his hand involuntarily did certain little things of which he was not even conscious, things which Wick's hand never had done.

"Naturally, the presumption was that he had killed Wick; otherwise he would not have dared to take everything that had belonged to the Swede. But as no trace was found of the missing man there was no *corpus delicti*, and Grant therefore could not be tried for murder. He was found guilty of forgery, however, and is serving his term in a Federal prison.

"Here is a case which is unique in my experience," said Mr. Wood, taking out another collection of photographs. "Some years ago a young man and a married woman disappeared simultaneously from a Western city. It was found that they had spent several days at a seaside cottage. It was known that they had gone out together in a small boat; and the theory was that they had been carried out to sea by the tide.

"Several days after the story became public, a little girl was reported to have found a note in a wooden box on the beach. It was written in pencil and signed by the missing woman. At least it purported to have been written by her and said that they had gone crabbing, and had been carried out to sea.

"THE note was brought to me for examination. The woman's husband declared his wife wrote it. But after comparing it with specimens of her handwriting, I said she didn't. The young man's mother declared that her son had written it. But I was positive that she, too, was mistaken. I asked for specimens of the handwriting of everyone who could possibly have been concerned—but got no nearer to a solution of the mystery.

"Bring me some of the little girl's handwriting," I said to the man who had brought the case to me.

"Why," he objected, "a nine-year-old child couldn't have written that letter!"

"I think, from the writing, that she not only could, but did!" I said.

"And I was right. She was an imaginative child, who had read about bottles containing farewell messages being picked up at sea. She had heard all the talk about the mysterious disappearance; and she had wanted, quite innocently, to play a part in the exciting episode.

"As for typewriting, every make of machine, and every single machine itself, has 'individuality.' They have a thousand little details that betray them: spacing, alignment, a worn key, minute differences in the form of a letter. One machine cannot write as another machine does.

## Note the Men

You meet everywhere today  
They are fighting film on teeth

You see glistening teeth everywhere today. Not with women only, but with men—even with men who smoke.

They are brushing teeth in a new way. They combat the dingy film. It is so the world over—in some 50 nations; and largely by dental advice.

If you admire those whiter, cleaner, safer teeth, learn how folks get them by this delightful test.

### Film dims the teeth

That viscous film you feel on teeth is their great enemy. It clings to teeth, enters crevices and stays. Food stains, etc., discolor it. So does tobacco. Then it forms the basis of dingy coats. Tartar is based on film.

Film also holds food substance which ferments and forms acid. It holds the acid in contact with the teeth to cause decay.

Germs breed by millions in it, and they cause many serious troubles, local and internal.

### Had to fight it

Tooth troubles were constantly increasing, mostly due to film. So dental science saw that this film must be fought.

After long research, two ways were found. One acts to curdle film, one to remove it, and without any harmful scouring.

Able authorities proved these methods

effective. Then a new-type tooth paste was created, based on modern research. These two great film destroyers were embodied in it.

That tooth paste is called Pepsodent. To millions of homes the world over it has brought a new dental era.

### Other new factors

Research also proved that other effects were essential. So Pepsodent multiplies the alkalinity of the saliva. That is there to neutralize mouth acids, the cause of tooth decay.

It multiplies the starch digestant in the saliva. That is there to digest starch deposits which may otherwise ferment and form acids.

### Avoid Harmful Grit

Pepsodent curdles the film and removes it without harmful scouring. Its polishing agent is far softer than enamel. Never use a film combatant which contains harsh grit.

Those are Nature's great tooth-protecting agents in the mouth. Every use of Pepsodent multiplies their power.

### You'll clearly see

You can see and feel the Pepsodent results. After a week's use you never can doubt that you need it. And you will want all in your family to share in its benefits.

Send for the 10-Day Tube. Note how clean the teeth feel after using. Mark the absence of the viscous film. See how teeth whiten as the film-coats disappear.

Do this for your teeth's sake. Cut out coupon now.

**Pepsodent**  
REG. U.S. PAT. OFF.

The New-Day Dentifrice

A scientific tooth paste based on modern research, free from harmful grit. Now advised by leading dentists the world over.

"I have had an interesting will case recently, in which a first page, written on a Remington, had been substituted for a page written on an Underwood. When I looked at those two pages I felt like saying: 'The poor fool. To think he could get away with a thing like that!'"

"I was called not long ago in a murder case. A man was alleged to have insured his wife for five thousand dollars, and then to have poisoned her to obtain the insurance. At the autopsy, large quantities of the poison were found in her stomach. So there was no question as to the cause of her death. I was called to assist in identifying the husband as the man who had signed a fictitious name on a hotel register.

"You see how unexpectedly some little scrap of writing may become like letters of fire, to settle a question of life or death, or to point the way to a prison cell.

"If any document is questioned, or may be questioned in the future, have it photographed at once. Spurious documents, especially if they have been artificially aged, often change decidedly within a short time.

"Sometimes when I am examining and testing a doubtful document I wish that the people who are tempted to commit these crimes could look over my shoulder and see for themselves how surely they can be trapped. The fear of being caught is not a very high motive for avoiding crime, but it is better than none."

## Confessions of a Common Man

(Continued from page 34)

AMERICAN MAGAZINE that I was the only man he ever knew who could equal him in doing a good day's work. You all know how every man believes he accomplishes three or four times as much as his shop-mates, therefore Mr. Mason's tribute is at least evidence that I have been willing to work, after being whipped into the habit.

I realized also the importance of good behavior, which is even more vital than industry. Original sin is strongly developed in me, but the neighbors, wherever I have lived, have been kind enough to watch me carefully, and have corrected me when I needed it. Instead of the stick my father used, they grumbled, and somehow this evidence of their lack of approval found its way back to me.

And I am sincerely grateful to them. I often think of myself as a weak man whipped into a sort of respectability; first by my father, and then by the neighbors. There is an old Arab proverb: "The whip is sent from heaven." The whip has helped me, and it will help you.

A writer once referred to me as a skeptic. I am not a skeptic, but a believer. Evidently the confusion arose because this critic does not know his dictionary, which says a skeptic is one who "questions or denies the possibility of real knowledge." The first principle in my life is that real knowledge should be accepted and faithfully observed, and that knowledge is so simple that anyone may know the essentials. I have been a student in the school of experience more than half a century, and deny nothing I have found to be

The enterprise and perseverance of Richard Arkwright, who gave the world the cotton spinning machine, enabled this man of humble origin to revolutionize a whole industry. Forced to carry on his work secretly at night, under fear of persecution and theft of his ideas, his tenacity of purpose carried him to ultimate success and lasting fame.

## Steadfast Purpose

**T**HE unswerving determination with which Arkwright labored to produce the spinning machine is paralleled in many instances throughout the course of our industrial progress.

It was such steadfast purpose that ultimately achieved a tire for which the public had long waited—the Firestone Gum-Dipped Cord.

Measuring up to the needs of today for greater dependability and economy of tire performance,

this highly perfected cord has been acclaimed everywhere as a contribution of permanent importance to motorists.

Its success amply rewards the persistent effort of the Firestone organization during a period of twenty-three years.

A multitude of car-owners responding to the standard of value set by the Firestone Cord are showing their unwillingness to speculate further on quality of less certain dependability.

*Most Miles per Dollar*

# Firestone

## PROTECTION *for you and yours*

**T**HE home is sacred to you and your loved ones, your treasures and the quiet of your hearth. It must be secure against prowlers and unwelcome interruptions. But how?

By using Sargent Cylinder Locks on all exterior doors! These sturdy locks give unfailing and unquestioned protection. Their mechanism has resulted from years of engineering study and experiment. They are as perfect in operation as it is humanly possible to make them. And they will last in constant service as long as the home itself. You cannot afford to compromise on the locks between you and the world outside. Be sure! Use the Sargent Cylinder Lock!

Connecting with the Sargent Cylinder Lock, you may use a knob and escutcheon or a door handle to match the Sargent Hardware within your home—the same fine design, the same solid, time-resisting brass or bronze. Select Sargent Hardware with your architect. Send for the Sargent Book of Designs.

### SARGENT & COMPANY

45 Water Street Hardware Manufacturers New Haven, Conn.

Sargent Cylinder Padlocks

are as finely and stoutly made as a padlock can be—in their way as perfect bits of mechanism as the Sargent Cylinder Locks. They bring real security when used on garage, tool house or locker door, on the tire rack and chest of valuables.

true, from the rising of the sun to its setting, and through many mischievous nights. I have explored roads, doctrines, habits, diets; I no more doubt the possibility of a common man acquiring real knowledge than I doubt I am living.

And the best demonstrated fact in actual knowledge is that success in life is easier than failure. By "success" I do not mean a great career; I mean a thing as simple as a lazy boy being whipped into industry by his father, and later by his neighbors into a realization of the importance of fairness, temperance, and reasonable respect for the duties of life. By "success" I mean winning the name of being a good citizen: a man who supports himself, aids others at least a little, and is greatly in no one's way. The most successful necessarily meet with humiliations, failures, pains, discomforts, but in the main live easier and more agreeable lives than tramps and drunkards. The cleanest life is easiest lived.

And I wish to congratulate you on the great number of good citizens in the United States. When I make a long journey, all day I am in sight of the homes, shops, farms of successful men. All through the night I know these evidences are passing by; when I awake in the morning, there they are again, to continue through the day. And what great numbers of intelligent people are found in these communities! How well educated they are in the real affairs of life, how generally they teach good conduct! In not one of them will be found a public teacher of immorality; at least, I have never known one. The most universal thing in the world is the persistence with which all classes agree on the importance of morals, however frequently they may offend in private.

A grocer and his wife called on me lately and talked mainly about a young colored man in their employ. He was actually the driver of their delivery wagon, but they said he accomplished more as a clerk than any other employee of the store. He had never asked for an advance in wages but was receiving very high compensation, because the merchant knew the scouts of other merchants were after him. This colored man is a good citizen of his community, even a prominent one. And there are millions of other employers and neighbors willing to praise when there is occasion. I have noted that people are more willing to praise than condemn, when they have occasion, and I am grateful to them for the honest disposition.

**EVERYONE** is familiar with the fact that scouts travel about looking for promising baseball players. One of the most pertinent facts of life I have observed is that scouts go about looking for promising performers in every trade or calling. Let any sort of worker distinguish himself, however little, and a scout with a better position to offer will hear of him. Common man though I am, scouts have heard of me, and given me a chance in the big league. If I have failed, it has not been due to lack of opportunity. I have had all the appreciation I deserve, and probably a little more.

So I am an admirer of the people. I cannot fairly find much fault with those I have been intimately associated with so many years. Their average has been as good as, or better than, my own, and I must

## “And then he looked up”

MANY YEARS AGO in the court of a king lived a humble man named Damocles.

He envied the king's luxury and power, and, above all, his freedom from the worries that prey upon other men.

One day, to his surprise and delight, the king exchanged places with him.

Eagerly Damocles ascended the throne, drew his robes about him and smiled.

*And then he looked up and smiled no longer.*

Swinging by a single hair above his head was a sharp-pointed heavy sword!

WHAT is your sword of Damocles? Is it, Mr. President, the repeated disappointment of subordinates who are incapable of assuming responsibility? Is it the pressure of expenses that are forever threatening to exceed the monthly income? Is it the unpleasant reminder that men whose start in business was no more favorable than yours have far outdistanced you? Is it lack of confidence in yourself born of an imperfect business training?

These are very personal questions which no outsider has the right to press, and only you can answer. They are set down upon this page for one reason—and one only—because the Alexander Hamilton Institute is dedicated to the task of removing the swords that menace men's happiness.

### The sword that hangs over presidents

The Institute *can* remove, and *has* removed, the sword that hangs over Presidents—the depressing consciousness that the Company's growth is retarded because its men do not grow.

“The good that our people have received from the Modern Business Course is tremendous,” the Vice-President of a \$52,000,000 Corporation writes.

And the President of another great Company said:

“When I learned that fifty of our men had enrolled with the Alexander Hamilton Institute, the stock of our Company went up, in my estimation, at least ten points.”

### The sword of financial worry

The Institute *can* remove, and *has* removed, the sword of financial worry.

“I was manager of a branch office when I enrolled for the Modern Business Course and Service,” a man wrote recently. “My salary was \$2,200 and our home life was a constant struggle. Today I am assistant sales manager with a salary of \$7,000 and I feel that my progress has only just begun.”

“During the past two years my salary has increased over 400%,” another man writes. He is still in his early thirties and an officer of his Company. “This has been due to our rather remarkable increase in sales, but this increase is the indirect result of the ideas I received from your Course.”

### The sword of dissatisfaction

The Institute *can* remove, and *has* removed, the sword of dissatisfaction.

“For years I made no progress; I was merely keeping the wolf from the door.” This from a man who was manager of a telegraph office in a small city. “It was your book ‘Forging Ahead in Business’ that gave me the first real ray of hope.” He is now secretary of a large shoe manufacturing company.

There are nearly 200,000 self-confident men who have a very warm feeling of gratitude for the book “Forging Ahead in Business.”

More than 30,000 of these are presidents, and every president ought to have a copy in his library. More than 31,000 are vice-presidents, secretaries or treasurers, and the book is for such men, but not for them alone. Somewhere in the roll of the 200,000 are men whose salary and position in business were precisely like yours, whose sword was *your* sword, and who found in “Forging Ahead in Business” the key to the things they wanted most—larger income, larger opportunity, larger self-confidence.

Surely independence and self-confidence are worth the little trouble of filling in a coupon. Your copy of “Forging Ahead in Business” is waiting for you to perform that simple act.

admit regarding my country that it is at least the best in the world. On the whole, the people are fulfilling their destiny with very great patience and kindness.

We have not done better than we are doing because of human weaknesses which, very naturally, are numerous. For thousands of years every critic has said: "The trouble is—;" and then proceeded to point it out.

Is there some great fault we might remedy, greatly to our advantage? I think one of the most glaring is our attempts to reform others, instead of ourselves. Certainly our ambitions in this have been very high; no one can justly say we have not attempted enough. But perhaps our most conspicuous failing is that we all pretend to believe a lot of things we do not believe. We are often too cowardly to express honest opinions more respectable than the artificial ones we are whipped into cheering. I will illustrate what I mean with an incident:

**A**T KANSAS CITY, on one of the hottest days of last summer, a monster picnic for children was held. For weeks it was heralded in the papers. Committees went about collecting money and bothering those willing to work if let alone. Everybody apparently endorsed this effort to amuse and entertain the "kiddies," and no one did, except the leaders in the movement, who were professional politicians of one grade or another.

The picnic was a disgrace. There were a hundred and fifty heat prostrations and accidents reported among children in next morning's papers. During the day fifteen hundred lost children were reported, with frantic mothers looking for them; and some of the lost children spent the night at police stations.

The flowers in the park were trampled, supplies collected were eaten and destroyed with so much recklessness that everything gave out before the picnic had fairly started. There was no ice; no water. The children wouldn't scatter over the park, where there was shade, but collected in one spot, to see the "big program of amusements" the papers had so grandly talked about. No rational amusements were provided; the children stood out in the sun and screamed and yelled, and many thousands of them were spanked by mothers worn out and angry.

For weeks the worthy citizens of Kansas City were expected to smile and congratulate each other on this big attempt to please the dear children. As they overworked in collecting cookies to eat and clowns to entertain, and raised great amounts of money, they were called upon to think of themselves as unusually progressive and kind.

Yet the affair was actually disgraceful. There was no good excuse or reasonable demand for it. It merely looked well in print, or sounded well from the lips of local orators who appeared before various audiences for weeks, and demanded funds for another demonstration in public waste.

Everybody in Kansas City knows the place for children, on a hot day in summer, is at home, with careful and intelligent supervision, but the newspapers and orators had their way and the smiling and cheering continued until the big idea had practical trial, when it failed dismally.

Kansas City is full of good men and

## These Are The Hours That Count

**M**OST of your time is mortgaged to work, meals and sleep. But the hours after supper are *yours*, and your whole future depends on how you spend them. You can fritter them away on profitless pleasure, or you can make those hours bring you position, money, power, *real success* in life.

Thousands of splendid, good-paying positions are waiting in every field of work for men *trained to fill them*. There's a big job waiting for you—in your present work or any line you choose. Get ready for it! You can do it without losing a minute from work, or a wink of sleep; without hurrying a single meal, and with plenty of time left for recreation. You can do it in one hour a day, right at home, through the International Correspondence Schools.

### Yes—You Can Win Success in an Hour a Day

Hundreds of thousands have proved it. The designer of the Packard "Twin-Six," and hundreds of other Engineers, climbed to success through I. C. S. help.

The builder of the great Equitable Building and hundreds of Architects and Contractors won their way to the top through I. C. S. spare-time study. Many of this country's foremost Advertising and Sales Managers prepared for their present positions in spare hours under I. C. S. instruction.

For 31 years, in offices, stores, shops, factories, mines, railroads—in every line of technical and commercial work—men have been winning promotion and increased salaries through the I. C. S. Over 180,000 men are getting ready *right now* in the I. C. S. way for the bigger jobs ahead.

### Make Your Start Now!

No matter where you live, the I. C. S. will come to you. No matter what your handicaps or how small your means, we have a plan to meet your circumstances. No matter how limited your previous education, the simply-written, wonderfully-illustrated I. C. S. textbooks make it easy to learn. No matter what career you may choose, some one of the 300 I. C. S. Courses will surely suit your needs.

When everything has been made easy for you—when one hour a day spent with the I. C. S., in the quiet of your own home, will bring you a bigger income, more comforts, more pleasures, all that success means—can you afford to let another single priceless hour of spare time go to waste?

This is all we ask: Without cost, without obligating yourself in any way, put it up to us to prove how we can help you. Just mark and mail this coupon.

### INTERNATIONAL CORRESPONDENCE SCHOOLS

Box 7474-C, Scranton, Penna.  
Without cost or obligation on my part, please send me a copy of your 48-page booklet "Who Wins and Why" and tell me how I can qualify for the position or in the subject before which I have marked an X:

Do you grow chilly  
after exercise?

## For Protection, Health and Fit Wear Underwear that's

# Knit

**TWO** things make you chilly—cold weather and damp underwear.

Summer weather seldom chills. But Summer underwear chills quickly unless it is KNIT—your best protection in Summer as well as Winter. Knit underwear protects you even if you wear a weight as sheer as a silk stocking.

These Summer-weight KNITTED fabrics keep you very cool. They are porous and permit the skin to breathe while acting as an insulator to shut out the heat.

What is even more important—they absorb bodily moisture and dissipate this moisture to the air rapidly. Your outer clothing is protected against soil. Your body is kept dry and comfortable. The underwear itself stays dry—a protection against "Summer colds" and chilling after exercise.

KNIT UNDERWEAR, in proper weights, will keep all members of the family more healthful and more comfortable throughout the year.

ASSOCIATED KNIT UNDERWEAR  
MANUFACTURERS of AMERICA  
208 FIFTH AVENUE, NEW YORK, N. Y.

Made loose or

reasons for this—27  
of them. Write for our  
Association's booklet.

women who do fine things when let alone. I am cheering just now because of what they did in the case of a fifteen-year-old girl who had an unusually promising voice; they raised twelve thousand dollars to send her to New York for necessary training. And, her voice proving as promising as claimed, New York welcomed her; another evidence that people everywhere are kind and appreciative, and that scouts find the deserving without aid from professional exploiters. Everywhere the people do fine things without suggestion from drivers; and many of the things they are driven to turn out disastrously. It is our misfortune that most of our best and most efficient men have no connection with public affairs except as taxpayers.

Everything of a public nature in the United States is fairly comparable with that children's picnic in Kansas City, because we all pretend to believe in a lot of things we do not actually believe in. And our greatest failures as Americans have been in connection with public affairs. Our elections, congresses, legislatures, club meetings, are conducted as was that picnic. There is great expense, great bother and excitement; everyone anxious to accomplish a good result, and everybody unnecessarily bored and harmed. In public affairs we learn nothing from experience, while in our private affairs we have progressed tremendously.

We are ineffective year after year in our public affairs because the democracy we actually believe in does not prevail. That great, worthy giant, the Majority, is whipped into cowardly submission by an active, impudent pygmy we might easily dispose of. The pygmy is Sentimentalism, which we have permitted to grow into a very dangerous thing, although seven tenths of us do not actually trust or respect it. In private we contemptuously call it "bunk," but in public we heartily cheer it.

**I HAVE** found that the basis of every substantial success is industry—character. You may deny this, but it will remain true. Rogues have prospered temporarily, but real and lasting prosperity must be able to look the sheriff in the face. And the great bulk of the people are able to shake hands with the sheriff without a tremor. The proportion of evildoers is actually small, except as most of us fail to do as well as we might.

Eighty per cent of the best of our best men are in some way connected with legitimate industry, the great school wherein is taught most surely that a man should be reliable—not to oblige any sort of teacher but to oblige himself.

The first, most necessary and respectable activity is legitimate industry. It develops the most cleverness, kindness, and usefulness. So those who float to the top in this great human struggle must inevitably be our best and most intelligent men. The exploiters who fatten on industry are artificial; watched less closely than the workers, and therefore less honest, if better paid.

I do not believe there are a great number of bad men trying to overcome such decency as we have. Almost everyone I have known has been a reformer. The amount of mischief accomplished by incapable men attempting to reform others with inefficient methods is appalling.

COURTESY OF MR. R. G. W.  
—and then he bought a Philco.  
What experiences—embarrassing or dangerous—have you had through the failure of ordinary batteries? We would be glad to hear from you.

## Then he got a Philco!

—the high-powered, long-life, shock-proof battery of whirling starts, quick white-hot ignition, brilliant road-flooding lights—the *battery that safeguards you and your family from the dangers and humiliations of battery failure.*

Veteran car owners know—thousands from perilous experiences—that there is no safety in under-size, under-powered ordinary batteries. Every crossing a peril. Every road-mile a risk. Every single start of your engine a possible hand-cranking ordeal.

And that's why—at the first sign of battery trouble—hundreds and thousands of motorists today are replacing their ordinary batteries with Philcos. They realize that a battery—beyond every other automobile part—must make good in performance or quickly give place to something better.

Philco's service guarantee says TWO YEARS. But Philco's exclusive oversize construction—its tremendous excess capacity—its famous Diamond-Grid Plates and other sound, time-tested engineering features—*not only make this extraordinary guarantee possible but extremely conservative.*

Why longer risk the uncertainties of ordinary batteries? A Philco Retainer Battery—the strongest, toughest and most powerful Philco Battery ever built—now costs you no more, *in many cases even less*, than just an ordinary battery.

There's a Philco Battery for every make and model of car. See your nearest Philco Service Station at once. Write for address, if necessary. Send for a complimentary copy of our new booklet, "How to Stretch Your Battery Dollar."

### Philadelphia Storage Battery Company, Philadelphia

*The famous Philco Battery is standard for Radio "A" and "B," electric passenger cars and trucks, mine locomotives and other battery uses where long-lasting, low-cost service is demanded. Whatever you use batteries for, write Philco.*

**PHILCO**  
DIAMOND GRID  
BATTERIES

### 3-Point Superiority

1. The Famous Diamond-Grid—the diagonally braced frame of a Philco plate. Built like a bridge. Can't buckle—can't warp—can't short circuit. Double latticed to lock active material (power-producing chemical) on the plates. Longer life. Higher efficiency.

2. The Philco Slotted Rubber Retainer—a slotted sheet of hard rubber. Retains the solids on the plates but gives free passage to the current and electrolyte. Prevents plate disintegration. Prolongs battery life 41 per cent.

3. The Quarter-Sawn Hard-Wood Separator—made only from giant trees 1000 years old; quarter-sawn to produce alternating hard and soft grain. Hard grain for perfect insulation of plates. Soft grain for perfect circulation of acid and current—quick delivery of power. Another big reason why Philco is the battery for your car.

#### LOOK FOR THIS SIGN

RADIO DEALERS—Philco Drydynamic Radio Storage Batteries are shipped to you charged but absolutely DRY. No acid sloppage. No charging equipment. No batteries going bad in stock. Wire or write for details.

## The importance of ONE SHORT WORD!

IN every home, there is a daily need for certain household products. Upon the purity and reliability of such products may depend the health of your family. Unless these are of the correct standards of purity, they may be more harmful than beneficial.

Your protection lies in remembering *one word* whenever you buy articles for your medicine cabinet. *That one word is "SQUIBB."*

The name Squibb identifies the products of a house which has served the medical profession for more than sixty years. In this service, E. R. Squibb & Sons have made many contributions to the advancement of chemical science as applied to medicine.

In most drug stores you will

find Squibb Sections. These sections are devoted to Squibb Products, every one of which is made to conform to the highest professional standard.

For instance, you will notice that Squibb's Epsom Salt is more agreeable to take, due to its freedom from impurities.

Squibb's Olive Oil is a superior "virgin" oil from Southern France, unsurpassed in quality and flavor.

Squibb's Bicarbonate of Soda is pure. It is, therefore, without the ordinary bitter taste which is caused by impurities.

Look for the Squibb Section at your druggist's. Whether you buy household or toilet products, you guard the health of your family by remembering one word that assures safety and reliability—"SQUIBB."

# SQUIBB

THE "PRICELESS INGREDIENT" OF EVERY PRODUCT  
IS THE HONOR AND INTEGRITY OF ITS MAKER

General Offices:

Copyright 1923, E. R. Squibb & Sons.

Such advances as we have made come from practical men interested in more efficient methods. The great good is accomplished incidentally by the workers: a little in every neighborhood every hour, and the total is enormous.

Another confession I wish to make (and perhaps it has been delayed too long) is that I do not easily make myself understood; I lack the gift of expression. I recall that a stranger once asked me to direct him to a foundry I had been familiar with thirty years, and which was in plain sight. My answer was such that the man became provoked and went angrily away, although my intentions were good. Later I saw him applying at the wrong place. I get this weakness honestly enough; I have heard my father say to his congregations he feared no one had ever understood what he earnestly desired to teach. If any reader of this believes I am advocating less good conduct, then I have suffered the fate of my father and have not been understood, for the strongest lesson that has been whipped into me during more than fifty years of active life in many places is that the greatest human mistake is sin, and sin is anything harmful, as surely as righteousness is anything good for you.

I HAVE just read a book giving a history of the speculations of the wise men of the past, and have concluded that the shepherds in the hills, and workers in the lowlands, could have corrected many of their mistakes. The hermits argue and speculate, and the common people find the simple truth in experience with active life. All they need do to be saved is to make public affairs as sensible as their private affairs. We are not a bad people lacking in intelligence; our great fault is we do not accomplish the good we wish to, and might accomplish, with less effort than we give to projects in which we fail.

The great reform will come about not from new laws or new wars, but from everyone behaving a little better. And every man may do a little better than he has been doing, with profit and satisfaction.

How long the quarrel has gone on that to-morrow will be better because of public reform work in past centuries, I do not know; but I have seen many to-morrows, and noted that the same old conditions prevail. Indeed, so far as public affairs are concerned, they are a little worse, because the public quarreling has grown steadily worse. The Armageddons we have fought have not benefited us, but there has always been profit and satisfaction in a good day's work performed by steady men who accept the rules, and carefully watch all the corners. The notion that we can get something for nothing must be abandoned. We cannot do it; no saint or statesman can bless you as much as you can bless yourself by better behavior, and more common sense.

I have as pretty dreams as any man, but after looking life squarely in the face a long time, I find my ideals are still as far away as Mars, and as completely out of reach. Therefore I humbly recommend that the people make an effort to reform their ideals, and make them conform to human and earthly rules; not because they wish to, but because it is the better way if they would be as effective and comfortable as possible.

## The Vagabond Days Have Come

**S**OME happy mystic day in June when the soft green of early summer is lit by the golden sun—forget the town—its turbulence and fame—and bid the world good-bye.

Idle the twilight hours away in a Jordan, light-footed, silent, flying free—companions, chums, camp followers of spring.

This nimble car of fascinating ease scuds through the large and solemn world—making one golden hour out-measure a long drab year.

A car of striking beauty on the road—it thrills you with its gratifying style—crowds your pulses with its urge of power—and satisfies your need for a reliable companion.

Economy of course—in tires and gas and care—the successor to the bulky car of other days.

A delight to drive on busy errands in the traffic—balanced as every car should be—a friendly pal for business and your freer hour.

JORDAN MOTOR CAR COMPANY, Inc. Cleveland, Ohio

## OSTEOPATHY

### The Application of Natural Law

*Osteopathy walks hand in hand with nothing but Nature's laws.*  
—Dr. A. T. Still

Providing a means for permanent health is the chief concern of the Osteopathic physician.

Because of this, temporary suppression of symptoms is altogether insufficient.

To him, a symptom is but an effect. His concern is with the correction of the condition that has caused the symptom.

It is this view-point that has led the Osteopathic profession into so great an understanding and application of natural law.

Growth, repair, recovery—these are not within the power

of man to supply. Nature, alone, can provide them.

The efforts of the Osteopathic physician are not vain attempts to supply something over which he has no control. His work is to keep the thinking right, to keep the living right, to keep the mechanism of the body right—so that nature can fulfill her functions and her duties without interference.

It is the natural way—and the Osteopathic physician believes, the only way—to provide a physical basis for permanent health.

Adjustment characterizes Osteopathic science. Spinal adjustment originated with Osteopathy.

Structural adjustment—the maintenance and regulation of the physical mechanism of the body—is utilized rather than drugs as curative agents.

Equally important with structural adjustment is the adjustment of diet, hygiene, sanitation, environment. Surgery is an integral part of Osteopathic practice when necessity requires its application.

#### Without Charge

An interesting and attractive 42-page booklet giving the history, fundamentals and growth of Osteopathic science. If you are interested in information concerning Osteopathy the Bureau will gladly send this book, without charge. Address your request to

## Where Their Roads Parted

(Continued from page 33)

supplied. She didn't shy at the word. "I won't let him forget. We're both going to have careers, you know."

Poor things, he thought. A fat chance for a career either of them had!

As soon as Bob Daynes received his A. B., he went to work on the "Star." He didn't go up to Rochester that spring. The urge to see Carol had come, with June. But he put it down sternly. Art first. . . . And newspaper work was a preface to Art. Besides, he knew a half-dozen corking girls in town who were willing to play around, and didn't take you seriously. That, he decided, was much the best.

Already he was writing graceful sketches in his spare time. He had actually sold two of them. Dick hadn't sold anything. He doubted if Dick had even written anything, outside the office.

The Winters had left the room in East Fifteenth Street and were living in a two-room-bath-and-kitchenette place on the upper West Side. He dined with them occasionally. Not often. It stirred him up to see old Dick domesticized. Aroused compassion that was a hindrance to creative work. There was no good getting stirred up about things that had no direct bearing on his writing.

In honest moments, however, he admitted that Rita Winter was a good little scout. Even if she did imagine she could write poetry, she was no shirk—earning her salary right along, keeping the flat clean, with Dick's help; cooking nourishing meals.

Then suddenly it was April and he realized that he hadn't been up to the Winter flat since February. He decided to drop in on them about six, armed with a thick beefsteak.

Dick opened the door for him. An unbelievable Dick, with burning eyes and two-days' growth of beard. There was a strange smell.

"For heaven's sake—what's happened?"

Dick drew him in. "Hush! It's Rita. We couldn't get her to the hospital in time!" Dick's voice was a dry whisper.

THROUGH the open door of the bedroom Bob saw the white-gowned figures of a doctor and a nurse. His hair lifted at its roots. He stood gaping, the paper of beefsteak in his hands.

"When will it end—when will it end?" Dick was imploring him—of all people! Dick's hands clutched his.

"Good heavens! How do I know!" He cast about for a means of escape. Dick's hands were vises.

But even as he pitied Rita (and he did) he felt resentment. What a babe Dick was! Always had been. Caught now in this net, now in that. And now in a net he would never get out of!

A low sound, not the voice of nurse or doctor, reached him. The vises cut deeper. Bob wrenched himself free. Must get out—

An hour later he did have the grace to call up and apologize. "I'm deucedly

# Mighty Like a Rose

Every baby is mighty like a rose in looks and sweetness to its mother. But the fact that 200,000 babies die every year in the United States before reaching their first birthday proves that thousands of mothers fail to realize how like a rose a baby is in its frail hold on life.

## *The most dangerous business in the world—*

the most hazardous occupation, is the business of being a baby. Figures show that the reckless taxi driver has a better chance to live a year than has the new born baby to survive one day.

## *Of the Seven Ages of Man—*

the first age, the "baby in its nurse's arms", is the most dangerous. 35,000 die on the day on which they are born. 100,000 of them die before they are one month old.

The hideous picture of the Ammonite god Moloch into whose fiery arms and bosom ignorant, superstitious mothers of old threw thousands upon thousands of babies as a sacrifice, fills the mind with sickening horror.

Yet today, through ignorance and neglect, the horrible sacrifice of babies is still going on, while parents and communities blame the deaths on Providence and hot weather.

"If all the babies born in New York City in one year were placed shoulder to shoulder they would make a line twenty-two miles long," according to U. S. Senator Copeland, former Health Commissioner of New York City, and

## *"Five miles of babies—*

died in the first year of life in 1891. In that year the great fight to save babies was started. Welfare

stations were established where mothers could go for advice and where their babies were given thorough physical examinations. Pasteurized milk was the next baby life-saving step. The result of teaching mothers how to care for their babies and of providing pure milk has reduced the death rate in New York City from 241 to 72 per thousand.

"But we may still refer to the deaths of infants as the Slaughter of the Innocents—for the work done in New York City but proves that thousands upon thousands of baby deaths can be prevented throughout the United States when every mother is taught that:

**"Babies do not die because the weather is hot—**

**"Babies do not die because it is dry or because it rains. Babies die in the summertime because they are not properly fed and not properly taken care of."**

## *Save the new born babies—*

by teaching the mother to safeguard her own health before the coming of the baby. Thousands of the 35,000 babies who now die on their natal day will then be saved, and one-half of the 100,000 who die before they are one month old

will be saved when mothers take care of themselves and make proper arrangements for the coming of their little ones.

Observance of the rules of hygiene, proper feeding, proper bathing, proper clothing, will save thousands of runabout baby lives this summer if the work of saving them is only begun in time.

Sweetest little fellow  
Everybody knows,  
Don't know what to call him  
But he's mighty like a rose.

Frank Stanton

The Metropolitan Life Insurance Company issues a booklet which has helped to save many, many baby lives. It may save your baby's life this summer. The booklet is called "The Child." It tells of the care of the baby—its feeding—the care of milk and what to do the minute a baby shows digestive disturbances—the cause of most baby deaths in summer.

The care of the runabout child is also

fully covered. The boggy of the Second Summer is banished and the belief that teething is a sickness is proved to be merely an old-fashioned superstition.

The booklet tells the Mother how to care for the baby's food—to remember the three C's—Clean, Cool, Covered.

The booklet was prepared for use

of Metropolitan Policyholders but whether or not you are a policyholder if there is a baby in your family and you want to know how best to see it through this summer, write the Metropolitan Life Insurance Company, New York City, and ask for a copy of "The Child." It will be mailed free of charge and without obligation on your part.

sorry! If there's anything I can do—"  
"Not a thing," came Dick's voice clearly. "We're all fine here now. We have a daughter!"

Bob marveled. Well, it wasn't his idea of happiness. Getting yourself into a state where you forgot to shave, and everything.

That evening he couldn't concentrate on the sketch he was doing. He wanted to finish it the worst way, too. The "Little Dipper" had virtually agreed to accept it.

That summer Bob's grandfather died and left him a small unlooked-for income. He began immediately to plan. There was no need of staying on the "Star" any longer. He could begin his world travels. His writings earned him a little. His father was good for reasonable deficits.

His parents approved the idea. They thought he would return in a year, and gave him a generous check. He had no intention of returning in a year, but he didn't tell them so. He had no intention of returning until he was a made man. He intended to begin a novel at once, as he traveled. That should bring him back in two or three years. Of course, if he wanted to whip together a cheap novel he might manage that sooner. But he was going to do slow, serious stuff. Literature.

He went up to Rochester and stayed a fortnight. Carol Hemmingway was out of town. He was glad . . . and sorry.

The afternoon before he sailed he called around at the "News" office. He wanted Dick to spend the last evening with him.

AS DICK crossed the city room to meet him he could hardly believe that they were the same age—twenty-four. Bob was alive, springy with anticipation. Dick was old, tired, settled.

Dick was enthusiastic over the plans. "That's great, that's great!" he kept saying. "You must come out to the house for your last dinner."

"No, I want you to—" Bob's voice died. He couldn't utter a plea for an evening alone with Dick. Dick's face forbade it. "I couldn't think of bothering Rita."

"Nonsense! You've got to come!"

"Then let's the three of us dine out."

Dick grinned. "Four in the party?"

The fourth doesn't like restaurants yet."

"I forgot. How is the younger lady?"

"Not so good. . . . But we have the best specialist in Manhattan."

Bob thought of the specialist's fees. More instalments! Dick telephoned Rita, and they started up-town.

The dinner was sketchy. Dick ran out for chops, then broiled them himself. Rita excused herself and did something to her hair; something rather futile, although it smacked of effort. She daubed a bit too much powder on her nose.

Would Bob like to see the baby?

He wouldn't. But he did. He gazed distastefully at the small unbeautiful infant.

"What's her name?" he whispered.

"Gloria."

Of all the inappropriate names! Gloria! He recalled the moments he had spent there the day she was born. And they could call her Gloria!

Half way through dinner Gloria began to cry. It was a feeble, annoying sound. Her parents looked at each other, dismayed. It wasn't nearly time for her bottle, they said.

Dick swallowed his coffee in haste and

## The Ideal Summer WATCH CHAIN

IN the vestless days of summer how are you to wear your watch? Certainly not loose in your pocket! Nor do you wish to use a full-length Waldemar to dangle awkwardly from your belt!

But a Simmons Belt Chain suits your needs exactly. It is just the right length to reach from belt to watch-pocket in a graceful curve. Its patented clasp locks securely around the belt. Yet, if you desire, it can be released by the pressure of a finger. Nothing could be neater, nothing could be surer protection for your watch.

And the Belt Chain comes in all the-link styles and finishes of any Simmons Chain. There are gold, green gold and Platinumgold drawn over a less expensive base metal by the exclusive Simmons process.

Ask your jeweler to show you a Simmons Belt Chain. You will find it beautiful and reasonable in price—\$2.50 to \$5.00.

R. F. SIMMONS COMPANY  
Attleboro Massachusetts  
R. F. Simmons Company of Canada, Ltd.  
Toronto Ontario

"For fifty years unsurpassed in watch chain value."

The panel at the right shows the links twice enlarged. Notice the clean-cut details and strength of design.

The Belt Chain is just the right length to reach from belt to watch-pocket.

"MAN IS NOT THE CREATURE OF CIRCUMSTANCES. CIRCUMSTANCES ARE THE CREATURES OF MEN"—DISRAELI

## THE LAND BEYOND

INTO the lives of most men comes at some time an urge—

An impulse to journey out and see what lies beyond the local horizon, to prospect other, newer lands.

The story of many a man's success is a record of that impulse acted upon—of a fortune founded in "the land beyond."

The Pacific Northwest is singularly rich in men who came—many of them empty handed—to see what the country offered. And found there opportunity, happiness and prosperity beyond the common measure.

This is an invitation to you to visit the Pacific Northwest. An invitation to *invest* in a vacation that will not only enrich your experience and broaden your horizon, but may change for greater happiness and prosperity your whole future life.

The gigantic forests, tremendous logging operations, saw mills and paper mills; the titanic hydro-electric power plants; the stupendous irrigation projects—all typical of the vast scale of things in the Pacific Northwest, are sights worth going far to see.

If your interest is in the soil, you owe yourself a first hand knowledge of the mar-

velously fertile farming and fruit lands. Or stock: there are the superb dairy herds, the equally magnificent beef cattle, the great sheep ranches and the famous poultry farms.

Visit the world's largest salmon fisheries and canneries; the mines and oil fields; the great harbors of the Pacific Northwest ports.

And with these—and more too numerous to list—you will enjoy a scenic grandeur and climate that will make your tour an unforgettable pleasure! Yellowstone, Glacier, Rainier and Crater Lake National Parks, the Columbia River High-

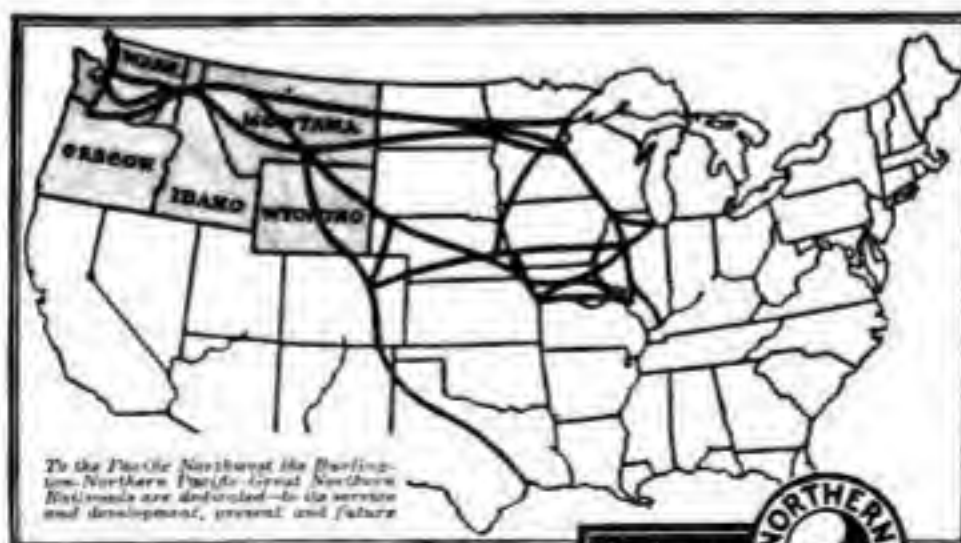

way, the Alaskan tour—numberless natural wonders that are nowhere in the world surpassed.

Everywhere in the Pacific Northwest—in the cities, in the country—you will sense a vastness of achievement, a rush of progress, the nearness of a great destiny—but more than that!

You will feel the *realness* of "equality of opportunity"—a higher valuation of the individual, and a larger chance for a man to succeed on his own resources.

Visit the Pacific Northwest!—not alone to see it, but to appraise it. Cover the ground yourself—weigh your abilities and means in the scale of its opportunities. Let your own judgment, based on your personal observation, decide whether or not this is the land for you.

THE LAND OF OPPORTUNITY

said he would eat his dessert later; it was a bakery pastry, marshmallowy and flat. Lifting his daughter's small weight up against his shoulder, he began to walk about. "I wouldn't do this for a husky youngster," he whispered as he passed Bob's chair. "But we figure this one has it coming to her."

Bob dried the dishes for Rita. Then Dick, the infant still against his shoulder, took Bob aside. "Stay here with me to-night, and let Rita go over to her brother's and get a good night's rest. She's worn out."

"Why, sure," Bob agreed. He had to! Rita objected. She said it was no way to treat Bob on his last night. "You go to a show with him, Dick," she said.

"No; I want to stay," insisted Bob. It had occurred to him that they could have an old-time talk.

But he didn't know the parents of young babies. They went to bed at ten o'clock. And the moment Gloria was asleep, Dick slept also.

Darn queer situation, this. Lying here in the room with an infant. Dick's baby. And Dick sleeping like the dead beside him. Old Dick, who was to have accompanied him around the world!

Bob fell asleep. In what seemed no more than five minutes the baby's cry awakened him. It was really two hours. The light was on in the living-room, and Dick in his pajamas was fussing at the kitchenette. He came back, carrying the child's bottle. Bob pretended to be asleep. Dick padded out and turned off the light. And the next instant he was asleep again!

So this was what babies did to you! It seemed as if Dick was up all night, fixing bottles, walking with the baby.

At seven-thirty Rita came in, refreshed, more as she used to be, and made them some excellent toast and coffee. The baby was brighter, too, and made a facial contortion which they said was a smile.

AND then they were leaving Rita and her gay smile. They went down in the subway together. Dick couldn't go to the steamship dock. He had to interview a man at nine-thirty. But he gulped out something by way of parting:

"I wish . . . I was going with you . . . you know! But, Bob, I can't think of anything but the baby! The doctor says she's awfully sick!"

Threading his way through the chattering throng on the "Lorraine's" deck, he could still see Dick in his wrinkly suit. "Nothing like that for *mine*," he repeated.

Bob had a wonderful time abroad. He visited nearly all of Europe. He went with a relief expedition to Russia, thus traveling safely. He went to China and Japan.

But he didn't start his novel. Neat themes for sketches kept occurring to him. He wrote them out, and sold most of them—to the "Little Dipper," for two cents a word.

After eighteen months, he decided to settle down in France. Some quiet inn in Provence, he thought, would turn the trick.

He found the inn—but he didn't start his novel. He grew alarmed. He had all the requisites: a classical education, newspaper experience, and travel. The fault must be in not concentrating.

Now his parents' letters were begging him to come home. His mother reminded

## Have you ever tried it this way?

*When you do a bee-line from the office to an evening*

Whenever you don't have time for a tub or a shower, or when these are not accessible, simply try dousing on Listerine. See how cool, refreshed and clean it leaves you feeling.

*When you're hot and sticky after summer sports*

*When there are five hundred members and only four showers*

And best of all, Listerine used this way as a deodorant cannot irritate or injure the most delicate skin. Rather, it is soothing, healing and evaporates quickly; and cannot stain garments.

him that it was two years since she had seen her boy.

He was sorry for his parents. He would like to see them, too. But he had promised himself not to return until he was made. If they'd only stop pleading, until he got started at least!

He supposed he'd have to go home. They were getting old. He felt guilty.

Yet why should he feel guilty? He had heeded Art. He had refused to be led up blind alleyways, like Dick.

He shipped for New York. He had been gone now two years and a half.

As soon as he landed, he called up the "News" office. They said Mr. Winter didn't work there now. He called the apartment, without success. Where had the poor things drifted to? Well, he couldn't wait to find out just now. He had to go to Rochester.

His parents were pathetically pleased to see him. Deferential. That hurt. Hang it, he hadn't expected to find his mother so gray. And the old man walked rheumatically. . . .

Carol Hemmingway hadn't married. She was just the same—almost. Her eyes looked tired, as if from too long gazing at a wall that had no door. Her ruffy hair had settled into a pleasant tawny shade. She still played a fast game of tennis, and read a lot. The old urge to drift with Carol came back.

But, no, no, no! Not yet. He couldn't marry. Not until he was sure of himself.

The second day after he came home he visited a book shop, and came almost immediately on a thin blue book called:

## The City Room

By Rita Winter

*What!*

There were eighteen short poems in the book. He sketched them through. Live, swinging songs of the newspaper world.

Small, thin Rita of the tragic, young-mother eyes! A sudden pride filled him.

**BUT** had she won her first small silver spurs by trampling on Dick? For if she had—The old sense of brotherhood with Dick came pounding back.

"Ah, I see you are interested in Mrs. Winter's book." The voice of the book dealer.

"Yes; I know her. Her husband is my best friend."

"Richard Winter? I congratulate you, sir! Then of course you're familiar with his book. A marvelous portrayal, marvelous—and a money-maker, too." The man sighed as though he regretted this.

Bob controlled a tendency to stagger. He followed the dealer's gaze to the window display, which he had missed. A hundred thick red books lay there, in even rows of twenty:

## Pavement Children

By Richard Winter

That afternoon he locked himself in his room. He was trembling. Things were happening inside him.

Rita's poems were lovely, to lay down, think about, take up again. But Dick's book!

Dick's book was a story of everyday city folk who weren't afraid of love and life; who accepted life's deals sometimes grumblingly, sometimes humorously—but always accepted them. A serious,

finely-written story. Literature. The sort of novel he had always intended to do.

**A DIFFERENT** sort of apartment—very. A frilled maid. Two babies rolling with an Airedale puppy on a Persian rug. A handsome young woman with gay gray eyes and dark hair done soft and high, writing at a spinet desk. An untidy young man—an extremely young-looking young man with a pleasantly-lined face—rushing in with a sheet of manuscript in his hand.

"And think, Bob," Dick was saying, after they had laughed and all but cried for an hour, "we're actually going to the Riviera this winter! I can't believe it."

Bob wished he had never been there.

There was a mirror across the room. He saw his reflection. How smooth his face was. No lines to speak of. Young-old Smooth—smooth. Good heavens!

As he went on talking, stray tangibilities began to pelt his brain: his mother's white hair; his last check from the "Little Dipper," for thirty-five dollars; Dick's book, in even rows of twenty; these two pretty children—Why, the adorable girl must be Gloria! Gloria of the feeble wail.

"When are you going to get yourself a wife and family, old bystander?"

"Me!" Bob laughed. His thought leaped to Carol . . . whose eyes looked tired, as if from too long gazing at a doorless wall. . . .

He felt a sudden crumbling in the underpinning of his carefully reared soul-structure. *By heaven, the wall did have a door! By heaven, he'd open it—and let things stream in!*

Words that he never intended to say tore their way up from that crumbling philosophy: "Thought I was serving Art—fool! She's been laughing at me—Art, laughing at me!"

He realized that he was making something of a scene. He could sense the sudden drawing together of the group of three. Dick's voice came quietly: "Art was never more than a glorified transcript of Life. . . . And, if you don't know Life, from the bottom—"

"I'm beginning to see. My heavens, yes! My mother—Why, they were old when I started away—and now—now—"

It wasn't a bit like Bob, the cynical, the unscathed. He saw, dimly, that a capable-looking elderly woman had come in and was leading away the children and the puppy.

"You mustn't reproach yourself, Bob." Rita was speaking. "Just start now."

He stared at her. He didn't resent the advice. He thought: "She knows. She knows."

"What shall I do—to start?"

Rita laughed. "Why, don't do anything! Let things do you!"

He searched her face for a hint of ridicule. It wasn't there. She knew! And Dick knew!

The tenseness of the group was lifted. "I've been talking like a silly fool," Bob muttered.

"Sure," grinned Dick. "A silly, human fool—at last. Say, I'm going to quit work for to-day. Let's all dine out and go to the theatre. Then Bob can come back here for the night."

"Fine," said Bob quickly. "All except the last. After the theatre I'm going to take the eleven-thirty train for Rochester."

# The Only Way Out of a Pit— —UP!

**I**T was Jack London—penniless and with only a scanty education—who uttered those words—

—"The only way out of a pit is UP!"

That one clear challenge, flashing across his mind with the force of inspiration, gave the impulse to work and study which set him on his way to a brilliantly successful career.

## The One Great Test—COURAGE!

It has been said that the great difference between one man and another is in the amount of COURAGE he possesses.

Not PHYSICAL courage, of course, but the courage to turn the searchlight on one's MENTAL equipment, to recognize the training which one lacks, and to do as Jack London did—climb out of the "pit."

Right now, in your own office, there are probably dozens of men who are performing the same old routine tasks they have been performing for years—tasks which literally millions of men could do equally well; yet hardly a man in the lot but thinks he is having a "mighty hard time" and that "luck never seems to break his way."

But how CAN it break his way—when he is obviously not PREPARED?

How futile, for example, to expect an employer in need of an expert accountant to appoint a man—at five or six thousand a year—who knows nothing beyond the keeping of a set of books.

—Or to expect the head of the firm to entrust his transportation problems to a man who has got all his knowledge about traffic management from the shipping room and the loading platform!

—Or to expect ANY reputable business house to choose, say, as district manager a man who has no conception whatever of salesmanship—to advance to the superintendent's desk a foreman who knows nothing about industrial management efficiency—to entrust a direct-by-mail campaign to a routine correspondent—or to appoint a "one-department man" as general manager.

It may be RESTFUL to stand at the bottom of the pit and to gaze at the stars—but the SHREWD thing to do is to seize the rope of SPECIALIZED TRAINING—and to pull oneself OUT!

## The Kind of Experience That COUNTS

—And EASIER, too, by far, than one might suppose—this climbing to a higher place by the aid of specialized training.

For within the last two decades a method of business training has been evolved which marks an advance beyond the earlier correspondence-school idea as outstanding as the advance of radio beyond the original Marconi "wireless."

Under this modern method—distinctive with LaSalle Extension University—every portion of the work is directed toward the rapid imparting of ORGANIZED EXPERIENCE.

Step by step, the member is shown the PRINCIPLES which govern the various business situations he must face in that bigger place—and step by step he fixes those principles firmly in his mind through the solving of ACTUAL BUSINESS PROBLEMS.

A dozen times a man might READ how to do a thing—how to swim, for example—and STILL be unable to do it!

But let him grasp the PRINCIPLES that govern an undertaking—and let him put them into successful PRACTICE—and he has acquired the greatest asset a business man can possess—thoroughly practical EXPERIENCE.

## A Club That Everyone Likes to Join

Hundreds—yes, thousands of letters in the files of LaSalle Extension University bear out the scientific soundness of the LaSalle Problem Method.

The members of LaSalle, for example, have a club they call the "100% Club," to which no man is eligible until he has increased his salary at least one hundred per cent. Not a month goes by but what acres of names are added to its rolls.

Indeed, if we liked, we could fill this page—in close-set newspaper type—with the names of just a small proportion of the men who have actually DOUBLED and TRIPLED their incomes through the Problem Method.

These men, you will say, are men of unusual determination and persistence—

Absolutely true.

—But also true that no one KNOWS what he can do until he TRIES.

And ANY man in earnest to advance will find encouragement in the fact that the AVERAGE salary increase reported by LaSalle-trained men is EIGHTY-NINE PER CENT.

## Ask Yourself if You Can Qualify— Then ACT!

There is a certain class of men who seem content in a low-pay job.

There is still another class in whom the phrase "I can't" is so deep-rooted that they seem afraid to grasp the fairest opportunity.

Neither of these types are sought by LaSalle—nor would they profit greatly by its training.

There are countless other men, however, who appreciate what specialized training MEANS—who realize the tremendous HELP it offers—and who are not afraid to take their chance against the entire field of competition.

To men of this latter sort LaSalle Extension University has much to offer—both for mental growth and for increased earning power.

If you are in earnest when you say that you wish to get ahead, you will take your pen or pencil NOW—and check the training that appeals to you.

The coupon, signed and mailed, will bring you information that will prove worth while. —There is, of course, no obligation.

## Wheels Within Wheels

(Continued from page 69)

it, when he told her that her husband was dead. What line of conjecture this might open up he was afraid to think.

"That's what I say," he put in abruptly. "It's not possible to state these hours exactly. Miss Mills is not sure of the time Mrs. Howland went down-stairs, Doctor Mason and I cannot be sure of the exact hour of Mr. Howland's death, nor can we make a good guess at it until we know what killed him. At whatever hour Mrs. Howland went down-stairs, it was evidently before the death of her husband."

Then O'Brien said suddenly, "In what mood was Mr. Howland when you left him, Mr. Magee?"

"Angry," said Magee, succinctly.

"At you?"

"No."

"At whom?"

"Oh, nobody in particular—at circumstances."

"Was Mr. Howland still angry when you talked to him, Mr. Swift? After Mr. Magee had left you?"

"He was getting over it," said Swift, speaking slowly, as if choosing his words.

**T**HERE was much more discussion, but the great question was still unsettled as to whether Ralph Howland met his death at the hands of a murderer or died from natural causes. Meanwhile, Rob and Sally Peters had been called back to New York by business.

Chief Weldon and his detectives, as well as Doctor Mason, seemed bent on the crime theory, while Doctor Avery and all the members of the household took the other view. Thus, it was plain to be seen that all were more or less influenced by their own inclinations.

The police could get no definite evidence, however, to help them out. Both Weldon and O'Brien questioned and probed and racked their brains for ingenious theories to fit the case, but found none. Doctor Mason persisted in his story of the fleeting whiff of the odor of prussic acid, at which Doctor Avery scoffed. If it were true, it meant a fine start for a poisoning case.

As county medical examiner Mason was in full authority; he gave a burial permit, but he reserved his decision as to what was the cause of death. And so Conrad's father was at last called in.

John Stryker was accustomed to houses of mourning, but never before had he been ushered into a household like this. At once he sensed the fact that sympathy was neither expected nor desired. He waited for a cue on how to conduct himself.

"I'm in charge, Mr. Stryker," Leonard Swift said, and his bearing was that of a man suddenly called upon to assume great responsibilities. "You will please attend to all details of the funeral of Mr. Howland, referring all matters of importance to me. Mrs. Howland is too ill to consider these matters at all. As to the funeral appointments, let them be dignified and proper, without any display."

"Yes, sir; yes, sir," said the black-barbed man, deferentially.

"A moment, please, Mr. Stryker," said

Weldon, as the man started for the door. "Just a word about that boy of yours. He wasn't at home last night?"

Stryker's face showed a sudden agonized look.

"No," he said; "but Conrad rarely is at home nights. He is—he is not responsible, you see. As he is quite harmless, I let him go where he will. He has done so for many years, and no harm has ever come of it. Was he here?"

"Yes; most of the night. If your son saw anything, could he tell us of it?"

"No." And the father's face was positive, though very grave. "No reliance whatever can be placed on his word. He does not mean to lie, he does not know lying is wrong; but his memory is a blank. He says one thing one minute and the opposite the next. He made no trouble, did he? My Conrad?"

So pathetic was the man's face that Weldon remarked gently, "Not at all, Mr. Stryker. That will do! You may go!"

"And yet the idiot boy was in the library last night," said the detective, O'Brien.

"How do you know that?" asked Magee, surprised out of his usual calm.

"Who else let the bird out? I'm told this idiot chap has a sort of mania for freeing captive animals. Must it not be, then, that he freed the canary?"

"That's nothing," Weldon remarked. "I can't connect that poor half-wit with this crime."

"If it is a crime!" said Magee.

"**I**T'S a crime, all right," O'Brien answered curtly, and announced that he would take the finger prints of everybody.

Weldon smiled. "I wondered how long before you'd get at that," he remarked. "Mr. O'Brien is a firm believer in the finger-print method. He'll take every hand from the head of the house to the lowest scullery maid."

"The head of the house is dead," said Magee solemnly, and quite as if he refused to recognize Swift's claim to that title.

"That won't prevent my getting his prints," and O'Brien left the room.

In carrying out his program, the detective so wheedled Nurse Lane that she readily allowed him to take her finger prints, and also ushered him into the little boudoir where Mary Howland sat.

"What is it?" Mrs. Howland said, looking at the detective.

O'Brien regarded her closely. To his experienced eye, the process Doctor Avery had called unseating her reason had already taken place. Her glance, though direct enough, was a little vacant.

"Nothing much," said O'Brien casually. "Just put your finger tips on this sheet of paper, please, Mrs. Howland."

Without the least objection she did as directed, and then O'Brien said, "Where did you put the will, Mrs. Howland?"

"In that box," Mary replied, pointing to a leather box on the table.

"May I take it, please. They want it down-stairs."

She made no objection, and O'Brien put the document into his pocket. Mrs.

## YOUR FRIEND AND OURS —THE GROCER

YOUR grocer knows us. He has known us very well for a very long time—ever since he has been in the grocery business.

And we know your grocer. Our force of salesmen is sufficiently large to enable us to visit him very frequently—every few weeks.

In fact, the grocer who distributes the 57 Varieties in your neighborhood is our local representative there. He knows your wants and tastes—and helps us serve you.

By dealing directly with your grocer, and by having such frequent contact with him, we are able to keep him supplied with a good assortment of the 57 in limited quantities. In this way we help him make sure that every one of the 57 Varieties on his shelves is of the very freshest quality when he offers it to you.

Your grocer's cooperation in always keeping the 57 Varieties available in your neighborhood makes him an important factor in our business—and an important member of your community.

H. J. HEINZ COMPANY

## Good Food? Yes Good exercise? NO

**T**EETH were meant to work hard; gums are healthiest when massaged in masticating rough food. And this soft modern food of ours gives little work to your teeth and even less exercise to your gums.

### Does your tooth-brush "show pink"?

Because the gums get so little stimulation, they are, in late years, growing soft and flabby, and tooth troubles, due to weak gums—and most of them are—show a decided and alarming increase.

The dental profession is awake to the situation—nearly 3,000 have written to tell us how they combat soft and tender gums by the use of Ipana Tooth Paste.

In stubborn cases, they prescribe a gum-massage with Ipana after the ordinary cleaning with Ipana and the brush. For Ipana Tooth Paste, because of the presence of Ziratol, has a decided tendency to strengthen soft gums and keep them firm and healthy.

Ipana is a tooth paste that's good for your gums as well as your teeth. Its cleaning power is remarkable and its taste is unforgetably good. Send for a sample today.

Howland's eyes followed his movements, but still with that blank, unseeing stare. "Avery's right," O'Brien thought to himself. "A jolt of any sort would make her a maniac. But as yet she is holding on to her brain."

O'Brien went down-stairs and gave the will to Weldon, with a brief account of its finding.

"What made you think she had it?" Weldon asked.

"Why, I had looked in the drawer they spoke of, and it wasn't there. But on the drawer were fresh finger prints, and as soon as I saw Mrs. Howland's hands I knew they were hers. Nothing surprising that she should have possession of her husband's will, but—it may establish the fact that she was down-stairs last night, later than the men were."

"H'm. Is she crazy enough to have killed him?"

"I don't see how she could have done so. She's crazy enough, yes—but how?"

"How was he killed, anyway?"

"Doctor Avery knows more than he tells. He's shielding somebody."

"Must be Mrs. Howland, then. Who else?"

"Might be anybody in the house. I can't think Mason knows more than Avery about that prussic acid odor. I think Avery wants to hush it up."

"Well, he sha'n't. I'm going to get at the truth of this thing. Now, I should say that the will had better be read. Get the people together."

**T**HE entire household was summoned to the reading of Ralph Howland's will. Mary Howland was not present, but was left in the charge of a maid.

The provisions of the will were simple: About a third of the estate was left to Mary Howland. A large bequest was made to Austin Magee and goodly sums were left to Nurse Lane, to Miss Mills, and to several of the servants. A few friendly bequests were left to friends, and the residuary legatee was Leonard Swift.

At this point, the little group was momentarily electrified by an important and astounding proviso. The bequest to Swift was void, "If my daughter Angela should be found," to quote the document.

"Angela!" cried Leonard Swift, "why, she died when she was a baby!"

"Five years old," Doctor Avery corrected him.

"What does that clause mean?" asked Weldon curiously. "How could the child be found? Was there any doubt of her death, Doctor Avery?"

"Not the slightest. She died of the sleeping sickness. There was a terrible epidemic of that disease, and half the children of Normandale succumbed."

"Then Ralph's mind must have been affected," said Swift. "With Mary's brain unsettled, that gives us two irresponsibles to consider."

"Conrad making three," Doctor Avery added. "But I don't understand this thing. You're executor of the will, Magee; what do you know about it?"

"I know that Mr. Howland believed that his daughter did not die in infancy, but that she is still alive—somewhere."

"Had he any real reason to think that?" said Doctor Avery, looking absolutely dumfounded. "If so, why was I not told about it?"

"He had a reason to think it might be so," Magee returned. "But it is all uncertain. I'd prefer not to say more at present."

"By Jove, you will say more," Leonard Swift spoke angrily. "Not say more, indeed! You'll tell all you know about this absurd story, and tell it mighty quick, too. I'll have you know that such a clause jeopardizes my interests, and I won't stand for it! I believe that somebody—he looked straight at Magee—"that somebody has trumped up a plan to make believe Angela is alive."

"I think, Mr. Magee, you must tell all you know about this strange thing," said Weldon in his most judicial manner.

"But why?" said Magee. "The will distinctly states that the property is to be Mr. Swift's, unless the daughter appears. How can anything I say affect that?"

"I told you so!" Swift cried. "There is a plot afoot to do me out of this inheritance, and Austin Magee is at the bottom of it."

"There is no plot," Magee said quietly, "and if there were, it would be Mr. Howland's, not mine. It is his will we are discussing."

"There is a plot," Swift persisted; "I hold, Mr. Weldon, that you must make Mr. Magee tell all he knows!"

"I will tell," said Magee suddenly. "I think, perhaps, it is the wisest course."

His bearing was that of a man with a weighty secret to impart, and the little audience listened breathlessly.

"About two years ago," Magee began, "we had a notice from the Cemetery Association in Grantburg—"

"Where is Grantburg?" interrupted Swift.

"It is a small town in New Jersey, and it is where Angela Howland is buried," Doctor Avery informed him.

"Was to be buried," corrected Magee. "Yes, it is a small town, and the home of Mrs. Howland's girlhood days. When her child died, she wanted the interment in the old family plot at Grantburg. So the little casket was sent there."

"I REMEMBER perfectly," said Avery. "I myself superintended its dispatch, for Mrs. Howland was too ill and Mr. Howland too distraught to see to it."

"And you sent the casket out there by express," put in Magee.

"Yes; it was during the awful epidemic. I couldn't leave to go myself, and it was expressed to the cemetery people out there. Later I visited Grantburg to assure myself that everything was all right. I learned that Angela had been duly buried in the family plot. At the interment there were many relatives of Mrs. Howland and many friends and neighbors. I reported these facts to Mr. Howland."

"Yes," and Magee looked thoughtfully at the doctor; "it was all right—as far as the burial went. But—it was an empty casket that was buried that day."

"What! Impossible!" Doctor Avery's eyes nearly bulged out of his head. "Why, I know it was the right casket, I had selected it myself, a little white one with silver handles—and the name plate was on it, besides!"

"Yes, that is all true; but the casket was empty when it was put in the ground."

"How do you know?"

"Because, as I began to tell you, about two years ago, Mr. Howland received

## Just 15 Minutes a Day

What it will mean to you is told by Dr. Eliot of Harvard in the **FREE BOOKLET** below

**H**ERE are two men of equal position and business income. Which of them represents you?

They read about the same number of hours each week. But one has no plan for his reading; at the end of the year he has little or nothing to show.

The other talks like a man who has traveled widely, though he has never been outside of the United States.

He knows something of Science, though he had to stop school at fifteen. He is at home with History, and the best biographies, and the really great dramas and essays. Older men like to talk to him because he has somehow gained the rare gift of thinking clearly and talking interestingly.

What's the secret of his mental growth? How can a man in a few minutes of pleasant reading each day gain so much?

Dr. Charles W. Eliot, from

his lifetime of reading, study, and teaching, forty years of it as president of Harvard University, has answered that question in a free booklet that you can have for the asking. "For me," wrote one man who had sent in the coupon, "your little free book meant a big step forward and it showed me, besides, the way to a vast new world of pleasure." This free booklet describes the contents, plan and purpose of

### Dr. Eliot's Five-Foot Shelf of Books

Every well-informed man and woman should at least know something about this famous library. The free

booklet tells about it in detail—how Dr. Eliot has put into his Five-Foot Shelf "the essentials of a liberal education," how he has so arranged it that even "fifteen minutes a day" are enough, how in pleasant moments of spare time, by using the reading courses Dr. Eliot has provided for you, you can get the knowledge of literature and life, the culture, the broad viewpoint that every university strives to give.

Every reader of this magazine is invited to have a copy of this handsome and entertaining little book. It is free, will be sent by mail, and involves no obligation of any sort. Merely clip the coupon and mail it today.

**This famous free book  
gives Dr. Eliot's own  
plan of reading**

word from the cemetery people that, owing to freshets, the river running through the cemetery had overflowed its banks so often that lots on the bank of the river were unsafe, and it was necessary to remove the bodies buried in those lots to other locations. The lot of Mrs. Howland's family was one of these.

"Mr. Howland at first thought he would merely direct his daughter's casket to be moved with the rest. Then he changed his mind, and asked me to go out there and see about it. He had a great desire—perhaps it was morbid, but it was very strong—to look again on the face of his child, if the remains were in such condition as to render it advisable. This was what he wanted me to find out. He had been told that children dying of that disease preserved their natural looks for many years.

"I did not at all enjoy the prospect of the errand, but I could not refuse Mr. Howland's request. So I went, and there was absolutely nothing in that little casket. Nor was it possible that there had been a body buried in it. The satin lining was fresh and clean, though a trifle yellowed by time. There was no dust, no bits of clothing, no signs of a disintegrated body. It would be impossible for the remains to have disappeared so absolutely.

"I conferred with the cemetery authorities. While surprised beyond measure, they agreed that no body had been buried in that coffin. It was improbable, practically impossible for it to have been removed without their knowledge. So we faced another mystery. I bound them to secrecy until I could report to Mr. Howland and learn his desires."

"Incredible!" Doctor Avery said, staring at Magee. "I can't seem to believe it!"

"Yet it is all true," Magee said, "exactly as I have told it. Ever since my discovery, Mr. Howland and I have been trying to learn something further about the mystery, but we have been unable to do so. We questioned Mr. Stryker very closely as to the details of the shipment."

"Mr. Stryker is here now," suggested the doctor, "why not call him in?"

THE undertaker was summoned, and he repeated what he had already told Ralph Howland.

"I can't understand or explain it," he said. "I put the little body in the casket myself, and closed the lid. At that time there was a terrible rush of business—so many children died at once—and I was overworked. But I remember distinctly the Howland child, and I know I did all my duties exactly as usual. I remember the little girl well. She wore a short white frock trimmed with lace, and a string of coral—not beads, but that branchy coral that looks broken."

"And you sent the casket to the train yourself?"

"Of course I did. Went to the depot with it, and saw it properly shipped. I had receipts from the New Jersey people and due notice of its safe arrival."

"Then," said Detective O'Brien, "the body must have been taken out *en route*. That is a strange thing to happen! Was the casket opened at the time of the burial in New Jersey?"

"No," said Austin Magee, "it was not."

"That's stranger yet!" said Leonard

Swift, who was listening with a resentful look in his dark eyes. "Why wasn't it?"

"No, that's not strange," Doctor Avery remarked. "The casket was taken from the railroad directly to the cemetery, and the interment did not seem to call for its opening. But it was all wrong to send it unattended," he went on, broodingly. "I said so at the time. Yet there seemed nothing else to do. An epidemic, such as that one was, left no time or opportunity for anything except the care of the living."

"Well," said Magee, "there's my story, and it's a true one. For the past two years Mr. Howland has been trying to get some inkling of what could have become of his daughter. His theory is that she was taken from the casket alive."

"Alive!" cried Doctor Avery. "Impossible!"

"But is it impossible, Doctor?" Magee asked. "In the rush of the epidemic, might it not be possible that you thought the child dead, when she was not?"

"My God!" groaned the doctor. "If I could believe that—"

"It is only theory," went on Magee. "But it became an obsession with Mr. Howland. He believed thoroughly that little Angela did not die; that she awakened, and was somehow released from the casket, and that she is still alive."

"DOES Mary Howland know of this?" asked Swift.

"Not a word," replied Magee. "Mr. Howland would not tell her, knowing that the uncertainty would be harder for her to bear than the loss of the child."

"Do you suppose she read this will?" asked O'Brien, suddenly.

"I dare say," returned Doctor Avery; "and I believe that is what has made her so much more unsettled in her mind. The implication that Angela could be alive was quite enough to disturb her brain to the extent of irresponsibility."

"Well, I think it's all poppycock," said Leonard Swift scornfully. "I'm quite willing to take the chances of the child turning up again. She never will. I agree the body must have been taken from the casket on the way to its final resting place; but I don't for a minute believe it was a live body. It had been in the closed casket overnight—had it not, Mr. Stryker?"

"Yes, it had," said the undertaker positively, "in my rooms."

"The child couldn't survive that, could she, Doctor?"

"No," replied Avery, speaking as one in a daze. And indeed, this strange story had completely floored the good old doctor. If he had really thought the Howland child dead when she wasn't, he could never forgive himself!

"This whole story is strange and exceedingly interesting," said Chief Weldon, at last; "but even at that it is not our present business. That is, to find out if Mr. Howland was put to death and, if so, by whom. I cannot see that the reading of his will has thrown any light on this matter."

"Except," said O'Brien, "that it is sure that Mrs. Howland came down-stairs late last night and took the will away with her. Might it be possible, Doctor Avery, that the knowledge of the will's contents turned her brain, and in her madness she killed her husband?"

## Do you also guide her eating?

EVERY mother wants to lay the foundation for her child's education. But are all mothers just as particular to build for a healthy body?

Oatmeal is the safest corner-stone for health. But there is a great difference in rolled oats.

The superiority of H-O (Hornby's Oats) is due to an exclusive process of Steam-Cooking and Pan-Toasting the oats in the old-fashioned way.

The thorough Steam-Cooking in closed kettles, breaks down the starch cells to dextrinize the starch and make the oats digestible. Pan-Toasting in ovens over live coal fires, produces that delicious H-O flavor.

For free trial package, write the H-O Cereal Company, Inc., Department C, Buffalo, N. Y., or Ayr, Ontario.

## The Beard Softener

### Welcome back

I know how it is. You get kind of interested in the glowing promises regarding the magic virtues of some other shaving preparation and buy it. If you weren't always looking for the best, you wouldn't have known about Mennen's.

Under the Coué influence of aforementioned promises, you even imagine for a few mornings that you have found something pretty good, but somehow a beard is unresponsive to auto-suggestion.

Before the week is up, you begin to yearn for the old, firm, creamy Mennen lather. Your mind dwells on how soft and non-resisting your beard used to be. You miss that gorgeous after feel of glowing skin comfort. You begin to dislike the razor that had seemed so friendly. Blades don't last as long.

What a real pleasure it is, once more to see the old green and white striped tube of Mennen's in your bathroom.

I am glad you experimented, for now we can stick together to the end.

Welcome back!

Let me tell you a secret about Mennen's. Just because we gave to the world, ten years ago, the most perfect beard softener that had ever been made—which actually revolutionized the shaving habits of a nation—we didn't just rest on our laurels.

We kept right on improving the Cream. Perfecting Boro-glycerine and incorporating it in the Cream was a triumph. Boro-glycerine is a soothing emollient which relaxes skin tissues and provides an antiseptic protection.

Have you noticed what a small amount of the Cream you now require and what an enormous quantity of water you can work into the lather? Have you used Mennen's with cold or hard water? Have you tried shaving without rubbing in the lather with fingers?

All these superiorities are the reward of a firm purpose to retain leadership by a constant striving to improve?

Would you like to try a few Mennen Shaves? Buy a tube. Use it for a week. If the shaves are not the finest you ever experienced, send tube to me and I will refund purchase price.

THE MENNEN COMPANY

Mennen's Salesman

"It is quite possible that the reference to her daughter would cause her to lose her mind; but I cannot see how that indicates crime on her part."

"Mad people are often very ingenious," persisted O'Brien, who was greatly impressed with this new idea.

"But how could she do it?"

"Hatpin," said O'Brien, shortly. "You doctors say you can't find any wound, but there must be one."

"Not likely," growled Doctor Avery, who was nervously upset.

"But possible," O'Brien insisted. "A puncture at the base of the brain—he has such thick hair you'd never see it—"

"There wasn't any," and Avery spoke sternly. "I looked especially for that."

O'Brien said no more, but he shook an obstinate head.

"At risk of repetition," said Weldon, "I'd like you men to tell me again of your visits to the library last evening. Who went there first, to talk to Mr. Howland?"

"I did," said Austin Magee. "I was with Mr. Howland for a short time, and then Mr. Swift came, and I left and went up-stairs to bed."

"What were you and Mr. Howland discussing, Mr. Magee?"

"We were talking on what was to him an all-absorbing subject—his daughter."

"They were!" exclaimed Swift. "I heard them as I entered. And Magee was trying to persuade Mr. Howland that she had been found! Ridiculous! I can tell you all that, as master here, I will stand none of his hocus-pocus! It's all a piece of deceit—pretending to recover a living body!"

Austin Magee frowned a little as he silently contemplated the speaker. It was plain to be seen Leonard Swift was greatly annoyed at the idea of a living Angela.

"If I may be permitted a suggestion," Magee said, "why not quiz that idiot boy, Conrad. To be sure he wouldn't tell a coherent story, but he might give some broken sentences that would offer a clue."

"I expect to do that"—and O'Brien nodded—"all in good time."

"He's outside, prowling about now," said Edith, who was near the window.

"Have him brought in," ordered Swift. "Let's see what we can do with him."

CONRAD was of little help, however. He answered all questions willingly and volubly, but his statements made no sense. "You here last night?" O'Brien began, a little uncertain how to address this strange witness.

"Yeppy, yeppy," and the lack-luster eyes rolled about uncannily. "Yep, I was here all night—all night."

"You let the bird out of his cage?"

"Yes, yes, yes; poor little birdie. I let him out—I let him out. Nice little birdie. Where'd he go?"

"Were you on the porch, looking in the window all night?"

"All night—all night—all night, I was."

"You saw Mr. Howland through the window?"

"Oh yes, oh yes—all night. He sleeps in his chair! In his chair! Not go to bed—Oh, no."

"When you came into the room and let out the bird, was Mr. Howland asleep?"

"Oh, yes, very asleep—very asleep."

"Did you touch him?"

"Wake him up? Oh, no, no. Let him sleep—poor man so tired!"

"Now, whatever happened to Ralph Howland, that idiot had no hand in it," declared Swift. "Do send him away—he's awful!"

"I awful?" And Conrad roused to a semblance of mild anger. "Bad Mr. Swift—don't call poor Conrad awful."

"Better not antagonize him, Swift," Austin Magee said. "He doesn't forgive easily."

"He can't remember," and Swift laughed. "Send him away, O'Brien."

"Just a minute. Whom did you see in here last night, Conrad?"

"All everybody. Charles come—and Martin come—and Misser Swift, and Misser Magee—and angel lady come."

"That's Mrs. Howland," Magee explained. "She may or may not have come, but that's Conrad's name for her."

"Yes, angel lady come," Conrad repeated, "and gay girl come—"

"That's Miss Mills," Magee again said explanatorily; "the boy has names for us all."

"You saw all these in the room?"

"Oh yes, oh yes, oh yes—"

"Perhaps he did and perhaps he didn't," Magee said. "There is really no reliance to be placed on his statements. We've often proved that."

So the half-wit was sent away.

THE funeral of Ralph Howland was duly held and Leonard Swift took possession of his inheritance. He gave Austin Magee notice that his services were no longer required. Magee returned that he was executor of the will, and should stay on to see that its bequests were duly carried out. He said that if Swift wished, he would go to live at the village inn; but to take advantage of the offer would have seemed so positively churlish that Swift agreed to his remaining.

Mary Howland, kept in absolute quiet and seclusion by Nurse Lane, grew stronger in mind and body, and forgot, apparently, what she had read in the will. Indeed, Doctor Avery was not sure that she had read it, after all. The good doctor had a slight fear, deep in his heart, however, that Mary Howland was responsible for the death of her husband. He had not noticed that prussic acid odor, but he fully believed his colleague's attestation of its presence. And that, without question, meant poison. It was possible that Mary Howland could accomplish such a deed through the cunning of a disordered brain.

Mr. Esterbrook, the Howland lawyer, came often to the house, to advise and assist in the settlements. One afternoon, perhaps a fortnight after the death of Ralph Howland, he was in consultation with Swift, Magee, and the stenographer, Miss Mills, in the library, when a slight tap was heard on the door. A moment later Martin opened it, without a word, and ushered in a girl—a young thing, slim, dainty, and exquisitely gowned. She stood, framed in the doorway, one hand on the knob, and looked from one to another of the men. Stepping inside, she stood still for a moment and again glanced in turn at each man. Then, seemingly by instinct, she moved nearer to the lawyer, Esterbrook.

"I am Angela Howland," she announced. "Where is my mother?"

*This outfit exactly as pictured  
\$1.00 complete.*

# Mahoganite — New Scientific Water & Wearproof Razor Case

**T**HE Mahoganite Ever-Ready De Luxe Case appears to be of rare old mahogany — beautifully-grained and mirror-polished. Interior as well as exterior is given the same rich finish.

The case is fashioned of a vulcanized composition which is water and warp-proof—washable and sanitary.

Mahoganite is a novelty—something never used before for a razor case.

It is thick-walled—solidly built—neatly partitioned to hold the Ever-Ready frame, handle, blades, etc.

The outfit includes the heavily nickel-elled Ever-Ready frame with the new balanced hexagon handle, and a supply of the famous Ever-Ready Radio Blades—\$1.00 complete.

This ten-year guaranteed frame is scientifically designed to hold the blade at its most efficient shaving angle. There are no delicate adjustments to bother with—simply slip the blade into the frame, snap down the top, and the Ever-Ready is all set to give you the safest, quickest and best shaves of your life.

Drug, hardware, jewelry and general stores everywhere are now selling the new Ever-Ready De Luxe razors—the “Town,” in flat compact case of beautifully-grained imitation ivory—the “Touring,” in high, heavily nickelled case—the “Sport,” in flat nickelled “cigarette” type case—all \$1.00 complete.

No matter which outfit you select you will be getting a real \$5.00 value for \$1.00.

## Save Fuel Keep Warm End Draughts

You will be surprised at the small cost of equipping your home or business building with Chamberlin Metal Weather Strips.

And they add so much to comfort, cleanliness and good household economy. They save 25% to 40% of fuel costs. Keep dirt, dust, soot and smoke from sifting in. That ends one of the most tedious tasks of housework.

### Why Heat Your Building 36 Times Every Day?

Tests show the inrush of cold air at unprotected windows and doors fills the average building 36 times daily. Why fight this with fuel?

How much more simple to bar it out as thousands of good home managers do, with Chamberlin Metal Weather Strips.

At 12,000,000 windows and doors Chamberlin Metal Weather Strips permanently end fuel waste and discomforts resulting from draughts. They make homes dust-proof. Protect hangings, furnishings and decorations. End rattling doors and windows.

Healthier homes result. Children are safe from cold

air currents. No cold spots. You are not driven from the bright, cheerful window by chill draughts.

**Free** Chamberlin Strips are used on 85% of all weather stripped buildings, including homes, banks, schools, office buildings, churches, stores, hotels and apartments.

They are guaranteed to last as long as the building. Any need for service or attention, no matter how many years hence, is cheerfully done free, by Chamberlin experts. An estimate by our engineering department, on the cost of your equipment, is free. Just send the coupon.

## It's Fine to Have Ideas—But Can You Put Them Over?

(Continued from page 53)

Almost as difficult to deal with as the self-absorbed man is that very smart person who no sooner senses that you have a change to propose than he confidently assures you that he will "tell you why it won't work." This he proceeds in great detail to do, undeterred by the trifling consideration that, giving you little or no chance to explain, he has at the best only a hazy conception of your idea.

I once had a particularly exasperating case of this kind—the more I tried to explain, the less the man listened and the more he went on talking about something I never had in mind. Letting the matter drop for the time being, I suggested a few days later that he visit with me the office of a former client and there look into the workings of a department that I thought would interest him. He did so, and at the close of the visit turned to me to declare enthusiastically, "Now, that's what we ought to have." Of course it would have done no good for me to tell him that it was the identical plan I had been trying to present to him.

This method of getting ideas across by an object lesson is one that I use frequently. Indeed, I have found that it will reach men who cannot possibly be convinced otherwise. In conferring with the chief executive of a large establishment I once found myself balked by his repeated statement that he didn't want any "machine-made efficiency." It was useless to protest that my only object was the elimination of waste; all my ideas and suggestions simply rebounded from his stereotyped three-word barrier. At the close of the conference, he mechanically reached up and switched off the electric light. Catching his arm, I asked abruptly: "What did you do that for?" His heightened color showed that he got the point; that he realized he was practicing "machine-made efficiency" himself.

**B**ACK of the trouble I had with this man probably lay the fact that because of the way the word "efficiency" has been overworked and crimes committed in its name by incompetents and fakers, everything and everybody that could be associated with this word had got a black eye with him. And it is truly astonishing how often "hard-headed" business men are led into opposing a thing of clearly demonstrable money-saving or money-making value, simply because the thing has for them some objectionable or painful association.

A case of this kind occurred in a textile mill manufacturing some two or three thousand varieties, sizes, and styles of product, and which had a "color card" showing about five hundred different shades. A study of the dyeing room disclosed that it was the common practice to waste money dyeing very small lots at frequent intervals. Although five pounds of material was the proved economical minimum, sometimes there would be dyed only a few ounces.

We suggested that they never should

dye at one time less than a month's supply of each shade. Against this they urged that such a practice would increase their inventory, a very undesirable thing in a falling market. We showed that as the dyeing applied only to material already in stock, it could not possibly increase their inventory of purchased or raw material, and we proved from their own figures that our suggestion would save no less than \$500 a month in the dyeing room. You would think that any firm would be glad to add \$6,000 a year to its income; but the demonstration availed nothing. At length I got the explanation: A few months before, the firm had lost \$150,000 speculating in raw materials, and this experience made them shy at everything having any resemblance to an increase of inventory.

As cases of this kind are extremely common, it is for each of us, I think, to search his own mind and see if some painful memory (who does not have them?) is not making him in this connection *proof against the facts*, and so leading him into blindness to his own interests, and perhaps into injustice to others. I suspect that a good psychoanalyst could get at the bottom of many business blunders.

**R**ELUCTANCE to adopt new ideas also may arise from fear of criticism, especially that of one's superior officers. Frequently the management engineer hears it said by employees or by minor executives: "Oh, the chief would never stand for anything like that. It's contrary to his general policy." Which leads me to remark that if the average executive would require his subordinates to prepare statements setting forth their ideas of what his general policies are, he would in all likelihood receive some very astonishing information.

True, there sometimes is a good reason why minor officials should fear to adopt anything new, since over them is a man who, trusting only himself, centralizes in himself all powers of initiative. I once had business relations with the general manager of a manufacturing company who, in addition to his general managing, insisted on directing and approving everything procured by the purchasing department, every change in design by the engineering department, and every production plan, down to the purchase of specific pieces of machinery by the superintendent. None of his officials, he said, was capable of making decisions. When asked how they could learn to swim without being permitted to go into the water, he replied that he would permit them to make decisions when he had confidence in them, and not before. Is it surprising that this company to-day is keeping afloat with difficulty?

Of all the opposition you are likely to encounter, perhaps the most formidable is that of the man who, polite and affable, pretends to take a deep interest in your idea and to be willing to help out with suggestions of his own. "Very good," he

## NEW FEATURES THAT MEAN ECONOMY

*Important developments make the new Goodyear Cord Tire with the beveled All-Weather Tread conspicuously better in performance*

All of the several improvements embodied in the new Goodyear Cord Tire are calculated to a single result.

That result is increased economy for the Goodyear user—greater mileage at lower cost.

The new beveled All-Weather Tread, for example, is made of an improved rubber compound that offers extreme resistance to wear.

The beveled feature assures a more uniform distribution of the load over the carcass, enables the tire to seat itself better in ruts, and relieves the carcass from vibration as wear proceeds.

Contributing to increased economy also, are better unions between the plies of the carcass and between the carcass and the tread.

Contributing again are heavier sidewalls to resist curb and rut wear.

These and other features in the new Goodyear Cord with the beveled All-Weather Tread combine to the finest and most serviceable tire Goodyear has ever made.

Quieter, smoother-running, longer-lived and more economical, it is called by users the greatest tire achievement in years.

You can get this improved Goodyear Cord at no extra price from the Goodyear Service Station Dealer near you.

He is pledged to back up its high quality with a service that will help you get from it all the mileage built into it at the factory.

## The store that did a \$21,000 business during a special FARM & FIRESIDE week

**How the B. & O. Cash Store of Temple, Oklahoma (population 906), tied to the products advertised in Farm & Fireside and brought 10,000 people to their store in a single week.**

When Bob and Otha Mooney bought out a little grocery store in Temple, Oklahoma, fifteen years ago, they little dreamed that in 1923 they would be possessed of one of the greatest stores in the entire Southwest—a store that today, in a town of 906 people, is doing a business in excess of \$1,250,000 annually.

"Taking advantage of every opportunity we can safely swing" has been their guiding motto. Standard merchandise, backed by national advertising, represented one of these opportunities. Early in their career they learned that it was far easier, and took much less time, to sell merchandise about which their customers already knew something through the advertising of reputable manufacturers.

At the beginning of the present year, when the Mooney brothers were planning a Spring style show, it occurred to them that some additional attraction would be valuable in bringing in more customers.

### The Farm & Fireside Week

Why not a showing of the products we carry which are advertised in Farm & Fireside? they asked. "Why not give our entire window display to these products? Hundreds of our best customers are readers of Farm & Fireside—and it would be worth a good deal to us to show these people the merchandise which they have

read about in Farm & Fireside."

The idea was no sooner conceived than it was put under way. Twelve products,

Bob Mooney (right)  
Otha Mooney (left)

Proprietors of the  
B. & O. Cash Store

as advertised in Farm & Fireside, were selected for this display:

American Fence, Colgate's Toilet Preparations, Gillette Razors, Goodrich Tires, Hartshorn Shade Rollers, Ingersoll Watches, Mulsified Coconut Oil, Pepsodent, President Suspenders, Renfrew Devonshire Cloth, Swift's Products, Wright's Bias Fold Tape.

In each of the four windows large signs, "Come in and see this Standard Merchandise—As Advertised in Farm & Fireside," were displayed across the backs of the windows.

Each of the products was attractively grouped, and accompanying each display was a large cardboard sign bearing the words, "As advertised in Farm & Fireside," together with pasted-on copies of several advertisements of the product.

### \$21,000 in sales

What were the results of this display? No special price inducements were offered—and yet the sales for this one week reached

the remarkable total of \$21,000. More than 10,000 people visited the store during the week.

Sales on each of the Farm & Fireside-advertised products increased from 25 to 200 per cent. More than \$1,250 worth of American Fence alone was sold. Sales of Goodrich Tires were \$300. Sales of Swift's Products doubled. And so on—with every item.

The Mooney brothers saw an opportunity in Farm & Fireside advertising—and cashed in on it to the extent of several thousands of dollars.

### An opportunity for you

There is a similar opportunity in your community. Whether you handle one or a dozen of the products advertised in Farm & Fireside, there are hundreds of prosperous farm families, readers of Farm & Fireside, who will be interested in seeing the merchandise about which they have read. A window display of these products will make sales for you.

If you would like to try this plan in your store, we will be glad to help you. Just write us, "Tell me how to put on a Farm & Fireside Week," and name the products from the list below which you carry, and we will send you display material and suggestions. We will also include a copy of our new booklet, "Projected Selling," if you request it.

says; "but do we really need to do it? Why not do so and so?"—his "so and so" being, in effect, the very way the thing is now being done. Such opposition is formidable, not merely because it is cleverly veiled but because it is the mark of one whose conservatism is a matter of deeply-rooted principle or of habit.

NOW, this conservatism, or fear or dislike of change *as* change, has prevailed among the great majority of people in all ages. Don't let it discourage you.

If you are an enthusiastic, optimistic innovator, you will do well to view the chilling, pessimistic conservative, not as an enemy but as an opponent in a friendly game. If you have the facts on your side, and will keep patiently putting them forward, with due diplomacy, you must ultimately win sometime and somewhere. For facts are stubborn things.

Never forget, however, that real diplomacy is necessary; and do not expect to

change an existing order of things overnight.

Moreover, you cannot assume safely that the idea whose birth gives you such a thrill is born perfect. The chances all are that, to make it practically useful, it will need modifications or additions such as can be supplied only by other minds. All our great inventions, although they sprung from the *leading* idea of some individual, really represent the contributions of many individuals.

Even if your idea were to be born perfect, it would not be advisable for you to take that attitude. Discuss it with other men, especially those who are conservative. If the other fellow contributes a new thought about your project, go out of your way, if necessary, to make acknowledgment. It is not enough to mention it to him alone. *Mention it to someone else in his presence.* Men not only long for credit, but will fight for it. Give it to them freely, and they will plug for your game as they would for their own.

NINA WILCOX PUTNAM has decided which is the weaker sex, and so has H. I. Phillips, famous humorist of the New York "Globe." Next month they give their decision in companion articles. You will get many a laugh out of the amusing arguments advanced, and some real food for thought, too.

## Do the Wise Thing if You Know What It Is—But Anyway Do Something!

(Continued from page 73)

provided with an itinerary of stores which they must see, and of departments in those stores they must see, and they add to that as many places as time permits. They bring back a report, which they write out in full and send in to the head of the department, who replies to it in person. The whole selling force at Bamberger's is in this way shown the very best merchandising methods and offered a chance of comparison with their own, knowing that any word from them will be heard and answered. In addition, the executives of the store visit every department store of any size in the country, each executive traveling to a new district each year. Bamberger's can tell you what almost any store in the country is doing in a particular department at any time, and believing in reciprocity their own records are open to any visiting merchant.

"Some ideas we get are big and some very small," said Mr. Fuld. "But every report is studied and the writer receives a definite reply why a suggestion is accepted or refused. If it is accepted it is paid for. Any method that will help a force to develop into thinking people through their own observations is going to result in a broader and more efficient force. Let me read you a suggestion or two from these trips:

"We should have more goods bearing our name." [A report from the perfumery counter.] "Blank has many such articles and it keeps the store name before people.

"I don't like this store" [another co-worker said]. "It has no cordial welcome nor any 'at home' feeling. The salespeople don't seem to care whether you come or not.

"We ought to have a stand for rubber sheeting. It could be measured better and the customers could see it with less trouble.

"Nothing revolutionary there, but little things that make a store more efficient. One of our unique features is our telephone switchboard. That grew out of a suggestion from one of our co-workers who is now an executive."

It was a woman's objection to a toll charge that gave the co-worker an idea for a free telephone service. On the first day it was installed and advertised the store was almost swamped with orders. To-day there is a sixteen-position switch-board in the store, sixty-three trunk lines, with four hundred and eighty-two extensions, running through Newark, to Elizabeth, the Oranges, Bloomfield, Montclair, and other suburban towns. Anyone in any of these towns may call Bamberger's for a local charge. The result to the store is figured at a thousand extra orders a day.

"It isn't only women who like the free service," Mr. Bamberger assured me. "Men like it just as well. I don't mean that a man will go far out of his road to save five cents, but he'll call up a store to do it just as readily as a woman will. It took us four years to get the telephone number '1'—an unforgettable number."

"HOW is it?" I asked, "that you are adding over a third to your store after such a period of depression?"

Mr. Bamberger leaned back in his chair and reflected.

"I believe I am getting a bit superstitious about dull times," he said finally.

# HERE'S A PENCIL WORTH TRYING

1586-№2

Yes, sir! A real bargain in pencil satisfaction—a joy alike to your hand and your purse.

## This Amazing Book Has Increased the Pay of Thousands

W. Hartle of Chicago, Ill., had been for ten years in the railway mail service at a low salary. He sent for this book. During the last thirty days his earnings were more than \$1,000.

O. Mallroft of Boston, Mass., has increased his earning power since receiving this book to \$10,000 this year.

Charles P. Berry of Winterset, Iowa, had been a farm hand at \$50 a month. Then he sent for the book above and shortly after he earned \$1,000 a month.

F. Wynne of Portland, Ore., is making money that he never dreamed of before he sent for this book. One week he earned \$554.37, and the next week went over \$400—total for two weeks, \$954.37.

HUNDREDS of other cases are on record—stories of men who have suddenly stepped from ungenial jobs and small pay to magnificent earnings. Today they are making five, ten and fifteen times as much money as ever before.

And it all came about through reading a little Book, the same Book that is here offered to you absolutely free of cost. To thousands this Book has meant the turning point in life—the difference between commonplace work and careers of splendid success. It has brought amazing increases in earnings to men who had been plugging along for years in low pay jobs without any prospects of advancement.

### The Secret of Earning \$10,000 a Year

Yet this Book claims no magic power—it contains no get-rich-quick formula. Its secret is simply that it opens the eyes of men to the tremendous opportunities today in the most highly paid field of modern business—the great field of Salesmanship. It explains how any one, no matter what he is doing now, can quickly learn the secrets of Master Salesmanship in his spare time at home by means of a remarkable system based upon the fundamental Principles of Selling.

It tells of the wonderful work being carried on by a great organization of top-notch Salesmen and Sales Managers in fitting men for careers in Salesmanship and helping them to positions through its Free Employment Service.

### Whatever You Are Doing NOW You Should Read This Book

Surely if it has brought such good fortune to so many others—without any previous experience—you should at least examine the evidence. There is no cost or obligation whatever. Together with the Book you will receive the stories of men who tell in their own words of their amazing jumps to big earnings.

Simply mail the coupon or write—it may mean the turning point in your life as it has to so many others. Address, National Salesmen's Training Association, 23-G, Chicago, Ill.

Age..... Occupation.....

"The year I came here—December, 1892, and we opened the store on the thirteenth, too—was one of the panic years. Ten years ago, when the Hudson Tubes were completed, a number of Newark merchants felt that it was the end of big business for this city. With transportation to New York made so easy how could Newark hope to compete with the biggest market in the world? We didn't feel that way. We argued that we could always hold the trade, not by appealing to people to buy in their home town but by giving them everything New York could give in as good a way—and a little more if possible. That was why we decided to put up our new store, to be ready when the tubes were finished, so that we could give the people a beautiful store as well as good merchandise.

"This year we are adding to the building because we have been crowded; our goods could not be well shown, nor could our customers get as good service. The store has felt the depression of course, but what is depression but a forerunner of good times to come? This city and all the Eastern part of the country is but at the beginning of its growth. New York is going to be a city of a magnitude undreamed of now; Newark, an industrial center such as we have never yet seen. These little periods of depression pass, and are succeeded by periods of prosperity. This store will hardly be ready for good times before they are upon us—and we won't have time to build then."

"THAT'S like the heads," one of the executives assured me, "incurable optimists, both of them. But I remember that opening of the new store ten years ago, and some of us didn't feel any too sure of results. Most of us had seen what is only too common: a store get a good start, then put up a more ambitious type of building, and fail to get the old people into it. The old crowd, rather awed by the new magnificence, hang back, and there aren't enough new people coming to take their places. Like newly-rich people the

old friends are dropped before the new ones come. We were just in that position when one of the members of our committee came back from Baltimore with great enthusiasm for a made-in-Baltimore exhibit he had seen there. He proposed that we have such a Newark show. As Newark is primarily a manufacturing city it offered good opportunities. Mr. Fuld and Mr. Bamberger are always for trying out anything that promises well. Mr. Fuld never quite approved of this show, but finding the rest of us did, he gave his cooperation. It wasn't the first show we had given; when we were inducing people to round that corner at Market Street and come over here we had many shows. We ran a poultry show for about seventeen years, and it brought a surprising number of people into the store. And people heard of the store who never would have heard of it otherwise."

THE Made-in-Newark show ran for three years, and upon occasions there were one hundred thousand visitors a day. After three years the new store dropped shows and substituted other forms of publicity.

"We outgrew them, just as we have outgrown many ideas," said Mr. Bamberger. "But we continued to keep our name constantly before the people. It isn't enough for a store to sell good merchandise or to be honest with customers; it must see that people know it. It isn't enough for a man or woman to do good work; it is necessary to see that work recognized. We've done some things that were pure stunts, such as importing the first load of furs from Canada by airplane and installing the first radio department in a department store, two things which did more to make our name known than any business transaction we ever completed. Neither a store nor a man can go about shouting of his achievements, but to get ahead means not only good work but the recognition of it, and to assert one's self firmly and honestly is as much a part of business progress as work itself. It has to be done."

## And So I Left the Ministry to Go Into Business!

(Continued from page 41)

and myself but the probability of being dependent upon a pension in our old age. It was true that we had relatives who might help us. I was unwilling, however, to continue the devitalizing habit of depending upon someone else for help. This custom of mind had started back in the early days when I first began to wonder how I could live on my salary. Just at the time when things looked darkest, the congregation came in with a "pound party" that reduced the grocery bill. Then, a second time, when supplies were running low, the performance was repeated just in the nick of time. Presently we learned to know about when to expect these organized donations, and expect them we did! Gradually we came to depend on gifts of all kinds. When the baby was sick and the doctor said that he would give us his services at half price, I was

enormously relieved; for I did not know where I could get the money to pay him.

Through experience I learned that as a preacher I could get the price of almost anything reduced; for preachers never were expected to have enough money to pay as much as other people. I could travel on railroads at reduced rates, and I could get reductions at any store in town. There was a milliner among my members who insisted upon giving my wife a hat every spring and fall. Then the women in the congregation had a convenient way of noticing when our little girl needed a new dress, and bringing it to her. In fact, the feminine members of my family were pretty largely clothed through charity.

In the end I woke up to my shamelessness in going through the world and letting someone else pay my bills! I was nothing but a parasite on the society that

## AiR-Way *Will Let Your Home Breathe*

Don't swelter through the summer in a hot, stuffy house. Equip your windows with *AiR-Way Multifold Window Hardware* and enjoy the cooling comfort of every breeze that stirs.

*AiR-Way Multifold* windows flood the home with sunshine and fresh air. Your bedroom, for example, may be a sun room by day and a sleeping porch by night. Dining and living rooms with *AiR-Way* windows are always light and airy, while kitchens so equipped are comfortable on even the hottest day. Especially desirable for sun rooms and sleeping porches.

*AiR-Way Multifold Window Hardware* provides a weather-tight, rattle-proof window which slides and folds inside, affording a wide, unobstructed opening. If desired, *AiR-Way* windows may be partially opened for ventilation at any point. Easy to operate—no interference from either screens or drapes.

*If you plan to build or remodel, investigate the many advantages which AiR-Way equipped windows enjoy over the old-fashioned double-hung type. Catalog O-4, which fully explains the installation and operation of AiR-Way, is free on request.*

*If your local hardware or lumber dealer can't supply you with AiR-Way, ask him to order it for you from our nearest branch.*

# LEPAGE'S CRAFT BOOK

Made by League Member

This illustration was made from an actual photograph of a crocheted cover that goes around a flower pot and saucer to hide the unsightly red clay. The League Member who made it had never tried anything of this kind before, and she had no idea she could be half so clever or skillful. The material cost her only a few cents and she made it in half an hour. Since then she has made a number of other useful and decorative articles all described in *LePage's Craft Book*.

**This new, fascinating way  
to make things  
at home—**

**LEPAGE'S CRAFT BOOK**, fully illustrated, is a remarkable new publication that shows you a new way to make 50 different articles for use in your home. It is a much easier and quicker way than sewing, and much easier on your eyes. The directions for making are so clear, simple and complete that anyone can follow them.

You will be constantly surprised at the things you can make with the help of this book; at the ease and quickness with which you can make them; at their inexpensiveness, and at the high quality of your own craftsmanship. You can make things that until now only experts have made. It is truly fascinating, and the results are remarkable.

There is not a single impractical thing among these 50 articles. Each one is useful, decorative and substantial. And you can make them for much less than they would cost you ready-made.

**Send 10c in stamps  
for LePage's Craft Book**

Try this new way. A great deal of time and money has been spent in the preparation of this book now offered to you practically free. Cut out the coupon below; write your name and address on it and mail to us with 10 cents in stamps. We will at once send you a copy of *LePage's Craft Book*. Address: LePage's Craft League, care of Russia Cement Company, 52 Essex Ave., Gloucester, Mass.

I had expected to serve. Or, in still plainer words, I was a beggar!

At Christmas and Easter the children were supplied with toys and candy by their friends; so I was relieved also of the necessity of buying their luxuries. Yes, letting other people help to fill our needs and wishes had become a fixed habit with me. And now I was planning subconsciously to let my brothers or my wife's relatives educate my children, and probably help to keep my wife and myself in our old age. Were I to die early, my family certainly would have to be dependent upon them.

**BUT** my worst imposition, it seemed to me, was not on society at large so much as on one individual.

That individual was my wife! When I think now of the sacrifices that she had to endure, of the life of veritable slavery that she led, I almost wonder how a minister in a small church can have the heart to ask the woman he loves to marry him at all. It must be that he does not realize, any more than I did, just how much will be demanded of her, and because he hopes, just as I did, to get a larger church later.

I realized more poignantly than ever before that my wife was doing the work of four average women. She was first my wife and home-maker, a position in which many women have to have the assistance of a nurse for their children and a maid for the housework. My wife not only performed all three of these functions, but she was my assistant pastor as well. Indeed, she did as much actual ministerial work as I did. I could not have held my position at all successfully without her assistance, for in a church, as in no other field of activity there are certain things that are distinctly a woman's work. Being a general favorite, she held the congregation together and smoothed over much friction. But, oh, what a lot of her time it took!

I might have known that my wife's health could not hold out forever under all this strain. The day of reckoning finally came. When she fell ill, I, as usual, had no money with which to hire a nurse, so the congregation got one for me. Moreover, different parishioners kept the children from day to day, thus relieving me of the need to pay someone to take care of them, and the doctor gave his services at less than half price. It was the doctor who first gave voice to the thoughts that I had been harboring.

"This life is killing your wife," he said. "She was a woman with average strength to begin with; but she's been doing enough to kill two women stronger than she. The marvel to me is that she's kept up this long. I've been watching her and seeing how tired she's looked for months, and I'd thought of speaking to you before, but decided maybe it was not my affair."

His words cut me like a knife. Maybe I had become unduly sensitive, but I felt that the doctor had insinuated that I had not taken the proper care of my wife. Then I hid behind my old excuse. How could I have done any better when I had no money to hire the help that she needed? It was the fault, I said, of the congregation, for not paying me enough to live on. Yet after all, were they to blame? Down in my heart I knew that they were paying me as much as they

could afford to pay, for they were not wealthy people. Moreover, I had accepted willingly a call to a poor church, for I felt that the opportunity for real service was unusually great in such a church.

This brought up the question of my service. All in all, was my work actually worth more money than I was getting? In the end I decided that it was not. Altogether I was not doing a vast amount of work, because of the fact that my congregation was small and there was too much outside competition for new members. In the immediate vicinity of my church there were three other churches—a Methodist, a Baptist, and an Episcopal—all struggling hard for an existence, with barely enough members to keep going at all. There were too many ministers for the people in the neighborhood, and the work of each man was far from burdensome.

When my service was weighed in the balance I could not evade the glaring evidence that *I was the one who was being served by society more than I was serving it*. It seemed, moreover, that any accomplishments of mine had been done at the expense of my wife's health. Her illness tipped the scale and caused me to make my final decision to leave the ministry.

But what other work could I find? As a minister's position in society is unique, there seems no other occupation for which his training directly fits him. Moreover, in the business world the preacher usually is regarded as an impractical dreamer. Eventually I decided to write to my brother, who was in a Chicago bank, and talk things over with him. The idea of this letter was an inspiration, for my brother replied that a man had just been talking with him about an opening in a large industrial concern in Buffalo where a personnel director was needed. Indeed, my brother had mentioned me for the place, because of my understanding of people and my ability to handle them. He advised that I go to Buffalo at once for an interview. I decided to do so.

**MY PROBLEM**, as usual, was where to get the money for the trip. I knew that I would have to borrow it; but I resolved that, for the first time in my working life, I would pay the expenses of the trip in full. I was still a minister, but I was going on business not connected with the church. Thus, when I went to buy my railroad ticket I did not present the slip that would allow me a reduced fare. Moreover, I was going to stay at a hotel, and not be "assigned" to some home for entertainment! The very thought of it gave me an added feeling of self-respect, and an added determination to get that job. And I got it!

I started in Buffalo at four thousand dollars a year, and I have made good in my work. In three years of service my salary has been increased annually. I shall never be a wealthy man, as the world counts riches, nor do I aspire to be. But we have all that we want or need. Moreover, I know that I can educate my children and thus fulfil my duty as a parent, while I can make gifts to charity instead of receiving them. Since I know the struggles of a poor minister, I give to the church more liberally than the average man with a similar income. But this is a gift that my wife and I always enjoy, for we know

Standard kitchen sinks, yard stick high, provide comfort and prevent back-strain. How high is yours?

**Standard Sanitary Mfg. Co., Pittsburgh**

## Overland Scores Its Goal

Years of resolute policy have carried Overland to the zenith of its career. The new Overland is the greatest Overland ever built, at the lowest price. Its leading place in public confidence is both well established and well-earned.

No other car in its field offers the manifold advantages of an all-steel body, with baked-enamel finish—or the buoyant riding ease of Triplex Springs (*Patented*). No other

light car duplicates its liberal use of Timken and New Departure bearings in its axle construction.

The new Overland is a better looking car. The hood is higher. Body lines are longer. Seats are lower. It is also a very satisfying and economical car. The powerful engine gives smooth, sure performance and 25 miles and more to the gallon of gasoline. Drive an Overland and realize the difference.

we are putting the money where it is really needed. We not only contribute to the church in Buffalo of which we are members, but we also make contributions to several smaller ones that we know are having a hard time to make ends meet.

If the financial results, however, were the only benefits of the change it might be said that I sold my soul for a farthing. But here is where the best part of my story comes: In my new work I have found a greater opportunity for real service than I had in all my nine years as a minister. I wish I had the time to tell of my rich experiences in human contact, in helping the man who is discouraged, and in finding places where each worker will be happy and efficient. Indeed, I have the chance now to preach my sermons to those whose need of them is of a most practical and pressing nature. What is more, I have come to believe that the man in any big business, where he is thrown elbow to elbow with other men, has as good an opportunity to preach and practice the gospel of Christ as any man in the world. To illustrate I will tell one story:

A few months ago one of the factory hands, whom I shall call Jones, came to me with his problems. He had been with the company three years, and his pay had never been raised. With a wife and two growing children he was still making one hundred dollars a month, and his rent had been increased considerably. The circumstances reminded me so painfully of those under which I had lived but a short time before that my first impulse was to tell the man that I would see what I could do for him. But I did not, for I knew that no man wants to be pitied; he needs to be challenged. Instead, I said to him:

"IT IS the policy of this company to promote every man who proves that he is worth promoting. Now, if your pay has not been raised in three years, there must be some definite reason for it. *What are you giving to the company?*" The man admitted that for the amount of work he was doing he was well enough paid.

"Why not try doing a *little more* every day than you are expected to do?" I suggested, and he said that he would. Five weeks later I noticed that Jones had been recommended for an increase in salary. I was curious to hear what his boss had to say about him, so I called him to my office.

"I don't know what's come over Jones," he told me. "His work has been so much better lately that he's seemed like a different man."

Since that time I have been watching Jones, and I learned just the other day that he is to be given the place of his immediate superior, who expects to make a change.

This is just one of the hundreds of similar cases which I handle from day to day. In all my dealings with the men I stress the idea of service, of taking a pride in their jobs, and thinking of what they can give rather than what they can get. Thus I help them to help themselves, and it is surprising what a lot of heartaches I have been able to penetrate, and how many problems I have helped to solve. Above all, I am happy in my work. I am happy because I am doing something vital, and because I know I am serving, in the larger sense of the word.

## How You Can Give Your Home New Charm

**YOU** can give every room in your home that fine air of immaculate cleanliness—You can rejuvenate your furniture, woodwork, floors and linoleum—You can take the drudgery from dusting. By just going over all finished surfaces occasionally with Johnson's Prepared Polishing Wax.

### JOHNSON'S *Paste - Liquid - Powdered* POLISHING WAX

Johnson's Wax imparts a hard, dry, oil-less polish which will not collect dust or show finger prints. It quickly polishes to a velvety, artistic lustre of great beauty and durability.

Johnson's Polishing Wax comes in three convenient forms—Paste, Liquid and Powdered. Use the **Paste Wax** for Polishing floors of all kinds. Use Johnson's **Liquid Wax** for polishing furniture, woodwork, linoleum, leather, shoes and automobiles. Johnson's **Powdered Wax** makes perfect dancing floors.

### Are You Building?

If you are building or remodeling you should have our Book on Wood Finishing. We will gladly send it free and postpaid for the name of your dealer in paints. Use coupon below.

### This Book Tells

*How to make your home artistic, cheery and inviting.*

*How to put and keep floors, woodwork and furniture in perfect condition.*

*How to finish soft and hard woods.*

*How to refinish old wood in stained and enameled effects.*

*How to fill unsightly, germ-catching cracks.*

*How to stain wood artistically.*

Johnson's Polishing Wax covers up marks and surface scratches. Takes all drudgery from dusting.

Johnson's Liquid Wax is the ideal furniture polish. It cleans, polishes, preserves and protects.

Your linoleum will last longer and look better if you polish it occasionally with Johnson's Prepared Wax. It makes cleaning easy.

## Why I Quit Working For My Wife's Father

*(Continued from page 29)*

newspaper man knows, is intoxicating; it forms a habit which is almost impossible to break. A man may wander away into other lines of activity but, until his last day on earth, he will never pass a newspaper office and smell the fresh, damp ink coming up through the iron grating from the presses in the basement without wanting to walk into the office, take off his coat, and go back to work.

My first job was counting the papers and passing them across the counter to the howling mob of youngsters who piled in through the back door of the office as soon as school was out. The logical line of progression was into the business office or the advertising department; but almost from the first day, I began writing little items in odd moments and slipping them onto the city desk. By the end of three months the lure was so strong upon me that my highest ambition was to be assigned to one of the battered old typewriters on which the news of our fair city had been pounded out since the oldest living resident was a babe in arms.

The chance came at last. I was assigned to a suburban district where nothing ever happened except afternoon parties, and deaths of old people, perfectly proper weddings, and an occasional broken leg caused by slipping on the ice.

From that bucolic beat I was removed after a while to police headquarters; then to the city hall. And three years from the time I started I was assistant city editor at a salary of forty dollars a week. That year Ethel and I were married.

**E**THEL'S father and my father were classmates. I had a letter of introduction to him when I arrived in the city and was a frequent guest in his home. He is one of these elemental characters who has never had the slightest doubt or misgiving. Growing up on a farm, he determined to go to college, and went. Moving from college to the city he looked around, decided that the rubber business was destined to large development, borrowed five thousand dollars from a man who had never heard of him three months before, and began manufacturing a household product in a garret. To-day he must be worth well over a million dollars.

I am sure he liked me from the beginning; but he treated the newspaper business with a disdain that created unending debate between us.

As the time of the wedding drew nearer the colonel and I had fewer discussions. He assumed, without saying so definitely, that I would give up "this newspaper foolishness" when I had become his son-in-law. The idea did not appeal to me at all, but Ethel urged it.

"The business and I mean a great deal to him, dear," she said; "it would be selfish and unfair not to help him."

So we had the big church wedding, with great bunches of flowers, and automobiles, and the swell caterer from Chicago. It

LET A MOTORIST once own a car equipped with Gabriel Snubbers—and from that time on, while he may change his mind as to the type or size of car he wishes to drive, he will never change his mind about the value of Gabriel Snubbers and the need of them on *every* car. 37 cars are standard-equipped and the manufacturers of 34 others put holes in frames for them.

**S**OME almost unbelievable successes are being recorded by the General Tire. Not only in sales, great as they are, but in the shattering of mileage records which were generally supposed to have about reached their limit. To advertise a greater service than car owners *now* expect is daring, but more than justified in the eyes of anyone who is using the General Cord.

You probably know General's reputation for comfort—its ability to travel on unusually low air loads—but have you realized that all this comfort—all this extra cushioning for yourself and your car—is combined with such remarkable economy?

—goes a long way  
to make friends

# THE GENERAL CORD TIRE

was Colonel Mason's wedding from the Lohengrin march to the second helping of ice cream. I was about as important and conspicuous as a spare tire; and my little mother, in her faded black dress, looked as bewildered as an out-of-town cousin at a dinner dance. She cried when she kissed me. Long afterward my favorite old maid aunt told me that Mother had said that Colonel Mason seemed to think that buying a son-in-law was just about like buying a new car. She has very keen eyes, my little mother, and a way of saying things that is all her own.

After our honeymoon we settled down in a house which the colonel had built and furnished; and I "went to work" at the plant.

**T**HEORETICALLY I began at the bottom. I reported to Big Tim Hogan, superintendent of the yards, and took my place with half a dozen huskies of various nationalities, unloading crates and boxes from freight cars. My pay was forty cents an hour, and the work took everything that my training on the scrub team at college had given me. You would say, offhand, that there was no softness or favoritism in a business start like that. But consider the other side of the picture: My earnings for an eight-hour day were \$3.20, with time and a half for overtime. I was living in a twelve-room brick house with three baths; we had two maids and a car; we entertained and were entertained. The difference between my \$3.20 and the \$25 or \$30 a day which it cost to keep our establishment going was made up out of my wife's "allowance."

"No reason why you two should scrimp along the way your mother and I did," said the colonel to his daughter. "Money will all be yours sometime, anyway; might as well get some enjoyment out of it now while you're young."

"Course I think Ned ought to work, and work hard," he continued. "Got no use in the world for a man that hasn't shed his full quota of honest sweat. I want him to be able, at a pinch, to do any job in the whole works."

My increases in salary, which were frequent and substantial, brought no real satisfaction. The total was never quite enough to meet our living costs; and always there was the guilty feeling that I was being lifted over the heads of men who had every right to precede me. They had been there longer; they knew infinitely more; and, in a crisis, they would have been far more capable of assuming command. Yet I marched by and they stood still.

It was not during business hours that I felt most restless, however, but at home. Colonel Mason, with all his bluff and bluster, had two masters and knew it full well. At the works, in the Chamber of Commerce, or on the board of the First National Bank his word was law; but in his domestic relations he was *persuaded* by his daughter and *ordered* by his wife. A big-hearted, substantial woman is his wife, my mother-in-law. She likes me, in her dowager fashion, and I have a very sincere admiration for the way in which she stood at the colonel's back and fought off his enemies from behind, while he was laying them low in front. But she had plans for Ethel and Ethel's husband.

She had made up her mind that the

**DEPENDABLE AS TIME ITSELF**

# Of Every Five Persons, Only One Escapes

*Kindly Nature  
gives a timely warning*

All too few are immune to Pyorrhea.

The odds are overwhelmingly in its favor.

Dental records show that four persons out of every five past forty, and thousands younger, contract it.

Tender, bleeding gums are the warning signal.

When nature's kindly warning is unheeded, the gums recede, the teeth loosen or must be extracted, and the poison often spreads through the system.

After you have gone to your dentist for tooth and mouth inspection, brush your teeth, twice daily, at least, with Forhan's For the Gums. It is an efficacious, healing dentifrice, the formula of R. J. Forhan, D. D. S.

Forhan's For the Gums, if used consistently and used in time, will prevent Pyorrhea or check its progress. It will keep your teeth white and clean, your gums firm and healthy.

Buy a tube of Forhan's For the Gums today. Brush your teeth regularly with it. The foremost dentists use and recommend it. It is time-tested, beneficial, and pleasant to the taste. At all druggists, 35c and 60c.

## Forhan's FOR THE GUMS

years of her prosperous middle age would be made bright with the companionship of her daughter. I was her daughter's traveling companion, the strong-looking young fellow who sat beside her at dinners, or made a fourth hand at bridge, or went along to Europe to check the trucks and browbeat taxicab drivers. For these services she had purchased me, paying a good sum down and a generous instalment each month. That business, or any foolish ideas of my own—such as a man's duty to *earn* what he spent—should be allowed to interfere with her program was plain foolishness. She would not hear of it.

VERY early in the game we had the first of our many battles. I came home from the works one night dog-tired, to find Ethel getting into a new party gown under her mother's critical direction.

"You'll have to hurry, Ned," Mrs. Mason exclaimed in her Napoleonic fashion. "We're going to the Newtons for dinner and the theatre."

All the way home there had been just one idea in my mind—bed. For four nights running we had been to somebody's house for dinner or a dance. It was all right for Ethel, who could have her breakfast in bed and catch up with her sleep; but one of the men in my department at the works was sick, and temporarily, at least, I was doing a real man's work.

"I guess you'll have to go without me to-night," I said calmly. "I'm tired."

"Go without you," she repeated incredulously. "Of course we can't go without you! Hurry and change your clothes, or we'll be late."

At that all of my male ancestry for thirty generations rose up in rebellion. We respect our women, we MacDonalds, but the *man* sits at the head of the table; we are not in the habit of taking orders from our wives or our mothers-in-law. I kept my temper, but I intended to be firm.

"This is the busiest time of the year at the works—" I began.

"The works," she cried, before I could get any further. "Always the works, the works. I slaved as much as the colonel did to build those works, but I don't intend to spend the rest of my life slaving for them. And I won't have them control Ethel's life, either. What's the use of having money if you've got to keep on being a slave? We're going to the Newtons', and you're coming with us."

There was murder in my heart, and the words I was about to utter would have added something new to her vocabulary. But I looked across at Ethel and saw tears in her eyes—the first tears of our marriage. I turned on my heel and strode off into my room. I was about as entertaining at the Newtons as the butler that night; my contribution to the talk was zero. But I was *there*, Ethel's husband, the colonel's son-in-law was there all right.

How I came to hate that title of son-in-law. It hung about my neck like a millstone. A friend would meet me at the club.

"Come over here, Ned," he would say. "There's a dandy chap I want you to know." A moment later I would be shaking hands with this new acquaintance while the friend repeated the same old formula:

"Want you to know Ned MacDonald. Ned is Colonel Mason's son-in-law."

The new acquaintance would remark that he was glad to know me; and I, look-

*One million  
new users  
will say this year:  
"Royal Cords!"*

## If this happens to be the year you come over to Royal Cords

**T**HERE'S not much difference between the way a man buys his first U.S. Royal Cord and the way he buys any other tire.

But there comes a time a little later when he thinks back to see how he came to ask for a Royal Cord.

And why he didn't do it sooner.

\* \* \*

If 1923 happens to be the year you come over to Royal Cords you are likely to notice this—

You didn't buy Royal Cords on the strength of any advertised extravagant mileages.

The makers of Royal Cords believe in

letting each tire user make his own comparisons on his own car. That provides every man with the facts in the form most useful to him.

You didn't buy Royal Cords on an impulse. The conviction that the Royal Cord is a good tire had been growing with you for some time.

You didn't buy Royal Cords merely because they are the product of the largest rubber organization in the world.

More than anything else, it has been the simple, understandable policies of the Royal Cord people that have made the Royal Cord seem a tire of personal responsibility.

\* \* \*

It has been the growing understanding among men that Royal Cord value conscientiously out-tops all other tire values today.

## United States Tires are Good Tires

# As good a wood-insulated battery as can be made

Willard Wood-Insulated Batteries first established Willard reputation and leadership. For years they led all others as original equipment on motor cars and in sales to car owners. They held this position until Willard developed the Still Better Willard with Threaded Rubber Insulation.

Wood-Insulated Willards—better today than ever—cannot be equalled in value for the money nor excelled by any other make of battery. They're made in various types and sell at a wide range of prices.

## + T. R. I.

It stands for Threaded Rubber Insulation, an exclusive Willard feature and the biggest single battery improvement since the early days of electric starting.

T. R. I. means doing away with a \$10 or \$12 repair bill; less re-charging; more power to start your engine; less danger from overheating, and more miles of service.

That's because Threaded Rubber Insulation permits a more active and uniform flow of the acid solution and has greater ability than wood to stand heat, chemical action and the pinching and grinding of the plates.

*Willard "A" and "B" Radio Storage Batteries reduce noises and increase efficiency. Write for free booklet, "Better Results from Radio".*

ing into his eyes, knew exactly what was going on in his mind.

"Colonel Mason's son-in-law," he was thinking. "Pretty soft for you, old fellow. Only daughter, and a million dollars."

All doors were open to me. I was welcome everywhere, too welcome, if anything. For in every new contact there was always the suspicion—the lurking reservation which makes rich men so cynical and so lonely. "This man is cultivating me not because he cares a hang about me," I would say to myself. "He wants something from the colonel."

Deep down inside me there was the old Puritan conviction that every man who is born into the world has some real work given him to do, work that is his because he is himself. If that were true then I was a traitor to the Eternal Order. I was not doing my work; I was merely picking up the chips that fell from the colonel's bench. The call of the printing press was still strong in my ears. I began doing a little writing at night, and one or two things were accepted by an obscure magazine. It was like the smell of liquor to a reformed drunkard. I was restless. The colonel and Mrs. Mason noticed it and prescribed Europe again. But they were wrong. What I needed was not more vacation but work, my own work, which would let me hold up my head and say: "I am doing a man's job. I am supporting my woman and cubs" (we had two boys). "I am doing the thing that I was made to do, and asking no favors of anybody."

IT WAS the European suggestion that brought things to a crisis. Mrs. Mason proposed it, as she proposed most things, and the colonel acquiesced. Not only that but he added a pleasant little thought of his own. He intimated that when we got back there would be something bigger in store for me.

"I'm not going to keep on wearing harness all my life," he said, in his broad, expansive fashion. "There's got to be a new president down at the works one of these days. I don't know who it'll be," he added, winking at Ethel; "but I've kind of got my suspicions."

I didn't say anything just then. I couldn't. I wanted to talk with Ethel all alone, to make her see, if I could, how we were cheating ourselves. How, with only one life to lead, we were throwing away all the adventure and thrill of carving out our own path in our own way. I dreaded it. I approached the subject haltingly that night. I felt like a criminal about to rob a happy home. For what I had in mind, if she would agree to it, meant starting all over again, starting in with just the little I could earn, and making our way alone.

I stammered into the subject, but I had hardly uttered a sentence before I realized that I had done my wife the greatest wrong that any man can do, in his thought. I had underestimated her. She knew what I was going to say, had known it for weeks, in that strange, instinctive way which women have.

"You don't suppose I could live with you for twelve years and not know what was going on in your mind, do you?" she demanded. "I've been waiting for you to think it through, and I'm just as excited as when we were married. Think of the fun of it, Ned, beginning all over again. It's like having two lives in one. . . ."

## Luxury

By EDGAR A. GUEST

*Not in the gilded walls of wealth  
Does all life's luxury abide;  
Who sees his children glow with health  
Has more than money can provide.  
And those whose homes with love are blest,  
Whose walls with merry laughter ring,  
Though humbly reared, and humbly dressed,  
Have richer envied by the king.*

Written Especially for  
John Lucas & Co., Inc.

## LUXURY

There is no luxury in the life of a pioneer. Many businesses spring up, flourish for a few years and die. What is the reason that accounts for the great mortality of business concerns? The answer is in the difference in vision, methods and policy.

The heritage which comes with the years, if scrupulous attention has been given at all times to render a dependable service or to produce a dependable product, is the wide-spread confidence of the public in the name of that service or product. And such a confidence is a luxury, which many men and many businesses never achieve.

Paints and Varnishes

Purposely Made for Every Purpose

The next morning I went to the colonel.

It was a turbulent session, more turbulent even than I had anticipated. He stormed and roared. We were a couple of fools, a fine pair of babes in the woods. I was just as bad as my father, who might have made a fortune if he had only been willing to put his scientific knowledge to some sensible business use, but he preferred to stick up in a little one-horse college teaching a lot of feather-brained young fools. Fools like me—

The storm raged for an hour, back and forth. And then suddenly—so suddenly that it took me entirely unaware—it stopped. For the first time in twelve years I saw deep down beneath the hard shell of Colonel Mason, to his big, tender heart. His voice softened; his eyes filled up; he stepped across and laid his hands on my shoulder.

"I always wanted a son," he said in a choking voice. "I would give anything in the world to have my own flesh and blood sitting down there in my place, taking the little start I've made and building it into the biggest thing of its kind in the world. I've hoped that you—" He stopped, and controlled himself with an effort. "But I care more for Ethel's happiness and yours than anything else." And with that he turned suddenly and strode across the room and stood looking out of the window.

I hardly knew whether to go or stay. It was misery for me. I felt selfish and ungrateful; and yet I could not face the future in any other way. Presently he swung around, stuck one of his big cigars between his teeth and smiled. He was his old, confident self again.

"You're a couple of fools," he snapped, "and I'm going to have one dickens of a time keeping your mother from having you arrested. But I'll say one thing: you've got guts. Get out of here now; I'm busy."

THAT pretty nearly finishes the story, which would hardly be worth telling if it were not for the fact that there are so many other men in the world who, for one reason or another, are living their lives without ever finding their work.

From a letter that came to my desk only

last week I quote this paragraph. It refers to a close friend of mine, who married the daughter of a Pittsburgh millionaire:

It's sort of too bad about old Jeff. He had the makings of a really first-class lawyer; but between the automobiles, and Bermuda, and Europe, and Palm Beach, the law didn't have much chance for its white alley. From the point of view of the man in the street he has "everything that heart could desire." But H—, who sees him more often than I do, tells me that he is one of the most miserable men alive.

SO I might go on with several other instances, but they would add little to the story and, after all, it is my story. And if I were asked to pin a moral on it I think I should quote from doughty old Carlyle, who said: "Blessed is the man who has found his work; let him ask no other blessing."

As for Ethel and me, we are living in a good little house, partly paid for, as I said at the beginning. We have our good little flivver (now in its Year III: Miles 18,099) and every night we thank our lucky stars that I did not wait until it was too late, before cutting loose and starting to do the thing I really wanted to do. For we are exceedingly happy. I am managing editor of a newspaper, with fair prospects of succeeding to the editorship. I am active in politics, and who knows what that may mean? Congress, perhaps, or the governorship? Stranger things have happened in this staid old state. At any rate, we are living our lives and having our fun, and even the colonel and Mrs. Mason are reconciled to the situation, though they don't admit it. At the last Republican gathering in the state capital, the colonel and I were both delegates, and I was scheduled for a speech. After the meeting a friend rushed up to us, with a stranger in tow.

"Frank," he cried to the stranger, "want to make you acquainted. Ned MacDonald and Colonel Mason. Colonel Mason is Mr. MacDonald's father-in-law."

The colonel puffed up like a pouter pigeon, whether with pride or a touch of apoplectic wrath I could not make sure. Ethel, who was standing by, says it was pride.

## The Seven Greatest Americans

(Continued from page 15)

country and across the sea! And if one would discover his real estimate of the "damned human race," as he used to call it, one should read his "Mysterious Stranger," prudently reserved for publication until after his death. So we will put him *Fifth* on our list. My second choice would be Howells, his dear friend, who set new standards in novel writing. Before Howells I might place Henry James, had I read more of him and were he not by adoption half an Englishman.

When it comes to the fine arts, other than literature, I feel even less confident than in other fields that any choice is possible. Edward MacDowell was, I am confident, our greatest musical composer. He was also a man of very unusual learning and intellectual acumen. Among the painters there are Whistler and Sargent, ranked as Americans but spending their lives mainly in England. Of bona fide

Americans John La Farge perhaps ranks highest for his breadth and learning, as well as for his artistic achievement. Then there are the architects. Unhappily we scarcely ever think of them, although their works are full, conspicuous, and monumental. We think of the Woolworth Building in terms of a man who made millions selling articles for five and ten cents; we overlook Cass Gilbert, who tackled and solved a novel problem with such soaring grace. And there are in New York the two impressive railroad terminals, an inspiration to the hurrying traveler, the Public Library, the Columbia Library, and the very perfect St. Paul's Chapel on the Columbia campus, wrought out with loving care in every detail and adorned with La Farge's windows, with the blue Aegean shining behind the Apostle Paul preaching to the Athenians about the unknown God. Our civilization will

*YORKSHIRE MOORS, ENGLAND\**

*"Confound these infernal slippery roads! Why don't some of these clever Johnnies invent a tyre that won't slither about so?"*

*"They have—Kelly-Springfield Cords."*

**T**HERE is ample justification for the absolute confidence which the owner of Kelly Cords places in them. Not only are they surefooted on practically all kinds of roads and in all kinds of weather but they have that characteristic Kelly sturdiness which insures long mileage in spite of severe punishment.

Truly, a rare combination of Safety and Service, yet—it costs *no more* to buy a Kelly.

*\*Drawing by Laurence Fellows, England.\**

## Controlled Spring Action

**Y**OUR car can ride comfortably on rough roads only when violent spring action is prevented. The vicious rebound of the springs, after the bump, is the cause of most breakage and most discomfort. The body must be held as level as possible without up and down movement. That alone can give completely restful riding. It also saves the mechanism and the tires and results in distinctly lower operating and repair costs.

Hassler Shock Absorbers are wonderfully effective in controlling spring action. They have earned the enthusiastic approval of over a million car owners—and the respect of automotive engineers everywhere.

ROBERT H. HASSLER, INC.

Wholesale stocks are carried at all Distributing Offices.*

have advanced far when we ask who designed and adorned outstanding buildings, such as the Capitol at St. Paul, the Boston Public Library, the Congressional Library, or St. Thomas's in Fifth Avenue.

But no American architect can aspire to enduring fame yet. And the same can be said of gifted physicians or of scientific investigators, who usually enjoy little reputation beyond their own guild. Nor does the fame of historians, lawyers, and ministers extend far either in time or space. So we shall refrain from including any of these highly important classes in our list.

**F**INALLY, I come to the group in which I am personally most deeply interested: what may be called the "thinkers," who range beyond the confines of a particular art or science or profession, and endeavor to clarify our notions about man, his nature, possibilities, and destiny. Of these, four names stand out in my mind, four philosophers, as they would once have been called, whose insight is a constant source of wonder and excitement to me. They seem to be divided by a great gulf from those nearest them. I know others who have thought boldly and honestly and have expressed themselves ingeniously. But these four have thought so much more boldly than the others, have so much more successfully uncovered hitherto hidden things, and escaped so much more successfully than others from the routine presuppositions of their time, and made such contributions to the elucidation of our lives and the problems that beset us, that I have no doubts of their inherent supremacy. These four are William James, George Santayana, Thorstein Veblen, and John Dewey.

William James, who taught for many years at Harvard, is in a sense the Lincoln of our national philosophy in the peculiar affection that his admirers have for him. He was a most lovable personality. His great work on psychology put the whole subject in a new light, brought it close to every one of us and made it of urgent daily importance. The work he began in obeying the ancient behest to "understand ourselves" has been carried on by others, and the "new" psychology should in the end enable us to lead far more intelligent lives than has hitherto been possible, and to make far better terms with ourselves and others than previous generations have done. John Dewey has carried on James's work and advanced far beyond him in the analysis of human nature and conduct. He has shown why the older philosophy and psychology were too remote from the lives we really lead to cast much light upon our paths. He shows how we must use intelligence to break and modify old, noxious habits. Unhappily he is not so highly gifted as James as a stylist but fortunately he enjoys a great reputation with the more alert teachers throughout the country, and his "Reconstruction in Philosophy" and his recent "Human Nature and Conduct" can be read by anyone with a fair power of attention. Both of these works put old problems in a wholly new light for most of us. I can imagine no more important duty for those who have familiarized themselves with Dewey's ideas than to busy themselves explaining and recommending them to others.

George Santayana, whom I remember years ago as a handsome youth in one of

William James's classes, and who long taught at Harvard, is, as one of our college friends remarked, an "Olympian." He reviews the course of human reflection and endeavor with a species of sympathetic remoteness and detachment. His style is exquisite and the despair of other philosophic writers. But profoundly as I admire him, I see that he can never appeal to more than a very few, who have devoted themselves especially to philosophic meditation.

Thorstein Veblen is the Henry James of Economics and Sociology, so fascinatingly interwoven is his style and thought. His books on the leisure class, business as usual, with all its strange hazards and anomalies, the national spirit, the rôle of the engineer and scientist, and the patent deficiencies of our education, win the admiring attention of all those who incline to look at man as a serio-comic animal who should be handled somewhat ironically. As for his fame, when Sinclair Lewis mentions one of Veblen's books as having found its way into Main Street, I imagine scarcely a thousand of the hundreds of thousands of readers of "Main Street" would be very clear as to Veblen's claims to distinction. He should nevertheless be mentioned among those entitled to a fame which he can scarcely hope for. So it falls out that, reckoning with both merit and fame, William James must appear as *Sixth* on my list and John Dewey as the *Seventh*.

In timidly settling on these seven names I have, as is apparent, taken account of the multiform activities of mankind, political, military, commercial, scientific, artistic, literary, and philosophic; of the inherent genius of the candidates as judged by those best able to estimate their place among competitors in their special field of endeavor and, lastly, the success each has had in winning wide recognition and the reverence of great numbers of their fellow men. So, taking account also of my own limited personal knowledge, preferences, and prejudices, I should be personally inclined to answer the Editor's question as follows:

**T**HE seven greatest Americans in our history are Abraham Lincoln, Theodore Roosevelt, John D. Rockefeller, Thomas Edison, Mark Twain, William James, and John Dewey.

I am as much surprised as anyone else that the list has fallen out thus. It is the outcome of lines of reasoning which do not appeal to others—but of course the question has a certain fantastic quality about it and any answer is bound to partake of grotesqueness. All dogmatism is out of place and the fun consists in *thinking*, not in *deciding* in a matter that really cannot, in the nature of things, be decided.

Now for the latter part of the Editor's question: What are the lessons for us when we spy the footprints of the great on the sands of time? The great man is one who in some one or more respects escapes from the commonplace. He braves the dangers and discomforts of being exceptional. He runs great risks because we are afraid of the exceptional. He is likely to be without honor in his own country and age, as one of the most exceptional and most misunderstood of the world's great men so bitterly reflected. To be maligned by their fellows—called "here-

*for Economical Transportation*

## Making the nation a neighborhood

**G**EORGE WASHINGTON saw clearly and far ahead. He knew that Distance was the enemy which menaced the new Republic most.

One of his first acts following the surrender at Yorktown was to mount his horse and seek out new paths from the eastern seaboard to the west.

"Open all communications which Nature has afforded," he wrote to Henry Lee, "and encourage their use to the utmost."

Revolution made the colonies into states; only transportation could make a United States.

\* \* \* \* \*

The stage coach followed the ox cart, the steamboat and railroad succeeded the coach. Then came the automobile. When there were no roads, it created them. Where the railroad encircled hills, it pushed boldly across. Where cities were separated by miles, it reduced the miles to minutes. It has, indeed, opened all paths of communication and encouraged their use "to the utmost."

General Motors builds five passenger automobiles, of which Chevrolet is one.

Chevrolet brought to the General Motors' family a vision of great multitudes who needed economical transportation—a quality car at the lowest possible cost. Producing such a car, Chevrolet met a public response that was tremendous and has been increasing every year.

In the future, as in the past, those cars will play the largest role which can give the largest value. It is on the recognition of this fundamental truth that General Motors stands.

By the economies of large purchasing power and quantity production; by the free interchange of men and money and ideas; by the fullest encouragement of engineering research General Motors helps to build added value into the products of each of its parts.

Its ample resources are a guarantee that each of these parts is permanent—a continuing factor in the unfinished task of making the nation a neighborhood.

## How a roofing mistake cost Charlie Benson his home

By DON R. RANSBURG

It was only yesterday that I met Charlie Benson. I hadn't seen him in years. After a few minutes' chat, I asked him about that old-style roof I once put on his house.

"Well, sir," said he, "I have long wanted to tell you about that roof. You see, I have learned a good deal about roofing since then. It has been an expensive lesson, too, for it cost me my home.

"It happened like this: One night during a nearby fire, a burning ember was blown on my roof. Our home was in ruins before the blaze could be put out. We escaped with our lives—that was about all.

"As for my two next-door neighbors' homes, the flying sparks had no effect on those asphalt shingled roofs. They proved a better protection than our fire department.

"But that is not all I have learned," said Benson. "I have learned that there are many qualities of asphalt shingles. Neighbor Brown's roof, for example, was a complete disappointment. It quickly developed leaks, ruined their interior decorations, and required endless repairing.

"Now I know," said Benson, "that you are wondering about the Vulcanite Roof you put on John Baker's house. That as-

phalt shingle roof is surely a wonder! The shingles have stayed flat and resisted all kinds of weather. Besides, they make a fine looking roof and are still good today."

I was sorry to hear of Benson's bad luck; however, I was glad to know about Baker's Vulcanite Roof. For this again confirmed my long-standing belief in this wonderful roofing.

Today, when my customers want a *real* roof, I always recommend Vulcanite. I know it is heavy, rigid, tough and strong—the kind that gives service.

I understand that one of the big reasons back of Vulcanite quality is the Glendinning Saturation Process.\* According to this process, I am told, the felt base is run **THREE TIMES** through a hot asphalt saturating bath. Then huge, steam-heated rollers literally "drive" the excess asphalt into the felt. No soft or porous spots remain to let in moisture and cause rotting.

I have often wondered if my experiences with Vulcanite have been exceptional. I am told that thousands of other builders and users have given similar reports—and that it is today one of the oldest and most widely used of all roofings. Moreover, it is *even better* today than ever before.

I usually buy Vulcanite Roofing from local lumber or building material dealers. Or, if I want special information, I write the Vulcanite Division, The Beaver Products Company, Inc., Buffalo, N. Y.

# BEAVER

## VULCANITE ROOFING, WALL

The Vulcanite Roof shown above is made of "Self-Spacing" Individual Shingles. Patented "shoulder" automatically regulates the space between shingles. Also seals the roof above the notch. Shingles lay easily and economically—produce an extra thick roof that combines beauty with long wear.

Vulcanite "Hexagon" Slab Shingles produce a beautiful, durable roof of extra thickness and unusual fire-resisting qualities. Easy and economical to lay in the usual way or over old shingles. Patented design gives a deep, tile effect.

Vulcanite "Doubletite" Slab Shingles make a distinctively individual roof, not unlike Italian tile. Economical to lay. Triangular projections underlie each slot and assure extra wear and weather protection.

Vulcanite Roofings are also made in roll and ordinary shingle styles—for homes, commercial and industrial buildings—in jumbo and standard weights—in smooth finishes, surfaced with mica, talc and sand; also in red and green crushed slate finishes.

*You can always identify Genuine Vulcanite Roofing by the well-known Vulcanite name on the label.*

No room for rain or snow to blow in here

Vulcanite "Hexagon" Slab Shingles

Vulcanite "Doubletite" Slab Shingles

## \*Glendinning Saturation Process

*Why it insures roofing satisfaction and economy*

This process was named after Robert Glendinning, who many years ago founded the Vulcanite Roofing Business in Belfast, Ireland, and who is considered one of the creators of the asphalt roofing industry in this country.

The Glendinning Saturation Process is based upon the continuous method. Only genuine Mexican asphalt and our own make of tough, long fibre, pure felt are used. No imitations, adulterants or other cheapening materials. By means of this process, every tiny niche, crevice and pore of the felt base is thoroughly and permanently impregnated. This process is today one of the biggest reasons why Vulcanite Roofing never softens, dries or curls under summer's hot sun, why it avoids brittle hardness and cracking in freezing weather, why it retains its beauty and weather-proof properties even after years of exposure. In fact, this time-tested process is the foundation upon which the world-wide prestige of Vulcanite Roofing has been built.

## 101 Uses for Beaver Wall Board

Have you a wall or ceiling that needs repairing? Have you some remodeling to do? Do you need additional rooms? Are you building a new garage or summer home? Have you an idle attic? Do you need new partitions in factory, office or store? For these purposes and scores of others where a smooth and easily handled sheet of tough, durable, heat, cold and moisture-proof board is required, use Genuine Beaver Wall Board.

By insisting upon the *genuine*, you gain the advantages of (1) Virgin Spruce Fibre Through and Through. (2) 26-Layer Laminated Construction. (3) Patented "Sealtite" Moisture-Proofing Formula. (4) Kiln-Dried and Seasoned. (5) "Dead-Air" Insulation against cold and heat and sound. (6) Art Mat Surface. Genuine Beaver Wall Board is plainly

marked for your guidance and protection. Insist upon seeing the Red Beaver Border and Beaver Trade Mark on the margins of the back face of each panel.

Your lumber or building supply dealer can furnish genuine Beaver Wall Board in panels 32 or 48 inches wide and from 6 to 16 feet long.

Write for a **FREE COPY** of the **BEAVER PLAN BOOK** which tells all about Beaver Wall Board.

### Beaver Gypsum Wall

Beaver Gypsum Wall comes in large, wide panels of stone-like gypsum plaster, sandwiched between two facings of tough fibre board. These panels are nailed to the studding or over old walls. You can saw them just like lumber.

Beaver Gypsum Walls can be painted, papered or paneled immediately. Will not warp—burn—crack—or crumble. Permanent as a stone wall. Save much labor, time and "muss."

Millions of feet of Beaver Gypsum Wall are used annually in new building construction. It is sold by leading dealers in lumber and building supplies. Upon request we will send you a sample of Beaver Gypsum Wall with complete information on "how to use."

tic," "atheist," or "red"—shunned, persecuted, banished, imprisoned, burned, or crucified has been the lot of men we now rank as supremely great. We seem never to learn the lesson, and are as ready to punish divergence from respectable ways of thinking and doing as ever man has been. Dewey says that for one man that thanks God that he is not as other men, there are a thousand to thank Him that they are so like their neighbors that no one will notice them. So there is every discouragement to those who find themselves forging ahead of the procession. They are likely to be harshly recalled to the ranks. Too few of us study the lives of great men, or really consider their claim to the reputation which they have gained. It is only by doing this that we can derive any real good from them and take heart again when we face the obstacles they had to face in the disapproval of their associates.

We are by nature timid, and our education cultivates conformity and discourages originality. The main reason is that we want others to be docile and predictable and convenient for us. Ethics and morality, as usually accepted, consist in warnings against doing, not in exhortations to do.

Now, every one of us is exceptional by nature and experience. No two of us are alike in taste, capacity, and the range of our interests; but we are rarely encouraged to exhibit our peculiarities—only our likenesses. There was never in the whole history of the universe a person precisely like you or me, and there will never be. To make our lives sublime would be to realize boldly the capacities we each possess. And the study of the lives of the great would be a study of how rare individuals have, in the face of constant discouragement, managed to do this.

**G**REATNESS, in the last analysis, is largely *bravery*—courage in escaping from old ideas and old standards and respectable ways of doing things. This is one of the chief elements in what we vaguely call capacity. If you do not dare to differ from your associates and teachers you will never be great or your life sublime. You may be the happier as a result, or you may be miserable. For physicians now know that a great deal of distress and disease is the result of what is called the "inferiority complex"—our sense of lack of recog-

nition, and our inadequacy to realize the great things that we feel to be in us. We are right in surmising that we have far more capacity than we are able to manifest. This is rather grotesquely proved by the fact that we never get praise enough. Our deserts outrun the recognition which others are willing to grant. In a sense, we are all great to ourselves and we crave that others should see that adverse circumstances alone—bad luck, unfavorable conditions, jealousy, persecution, want of sympathy—account for our failure to prove our distinction.

Should our world get freer and more tolerant of divergence, and more appreciative of variation and individuality, there would be an increase of greatness, for greatness is not only a bold escape from the routine, conventional and accepted, but it is really at bottom a sort of extension or amplification of the commonplace. The scientific man sees what others see, and then he looks hard and sees more; and then things do not seem to him as they did before. So with the philosopher, and the poet. The artist sees possibilities which others miss, in color and form. This is the way things get along. *Each of us is great in so far as we perceive and act on the infinite possibilities which lie undiscovered and unrecognized about us.*

**I**T WILL be observed that I have mentioned no women among the great. I have taught women as well as men for many years, and see no special or clear differences in their possibilities. But women are traditionally permitted far less freedom than even the scanty amount approved in men. To be great, as we have seen, one must be brave and take the risks of neglecting the usual demands made upon our credulity, and the usual plan of life laid down for us by the people among whom we live. Now the woman has hitherto had far less chance of escape than the man. Most men yield to the pressure toward conformity and practically all the women. But times are changing, and we may look forward to the emergence of women who will disengage themselves from the old ideas of feminine propriety and from the often quite silly demands made upon them in the matter of dress and trivial social obligations, and develop here and there the varied capacity which I am confident that they possess.

## My List of the Seven Greatest Americans

### Prize Contest Announcement

**I**N THE article you have just read, Doctor Robinson gives you a list of men who are, in his opinion, the seven greatest Americans. What are your ideas on the subject? What seven would you select as the greatest this country has produced? Possibly you will not agree with Doctor Robinson in a single instance. Anyway, write us your list of the seven greatest men, and give a few sentences explaining why each one was selected. Be just as original as you care to; don't select any one because others have done so, but make the list absolutely your own. Think over your country's history and the great men and women whom you know or know about, regardless of whether they are famous or obscure,

and then write us your conclusions in a letter of not more than four hundred words. We offer these prizes: \$20, first prize; \$10, second prize; \$5, third prize. Competition closes June 20th. Winning letters will appear in the September issue.

Address Contest Editor, THE AMERICAN MAGAZINE, 381 Fourth Avenue, New York City.

Contributions to this contest, and any enclosure, cannot be returned, so make a copy of your contest letter, and of any enclosures, if you want to preserve them. Manuscripts and inquiries not connected with the contest must be sent under separate cover to the Editor of THE AMERICAN MAGAZINE.

## "The World Makes Way for a Man Who Knows Where He's Going"

(Continued from page 37)

one thing I wanted to tackle and the one thing for which I was best fitted.

"There was another circumstance that helped clinch my decision. When my father had been killed by the accidental discharge of his shotgun as he was climbing through a fence, the only thing that kept the family together was his seven-thousand-dollar insurance policy. Our Iowa farm was mortgaged and a number of debts were outstanding. With the proceeds from the policy Mother was able to pay off these obligations and have a comfortable surplus left over. This made a profound impression on me, and left me in a state of mind to advocate life insurance to other people with my whole heart and soul.

**A**FTER reaching my decision I went home and talked it over with my wife. She approved thoroughly of the step I was taking.

"You know lots of people here in Glenwood," she said. "That ought to help you in getting a start."

"I told her that I had no intention of starting out in Glenwood. There were two good reasons against it: One of them was no man ever got off on the right foot in business by cashing in on personal friendships. The other was that the territory was too limited to allow me to reach the goal I had set for myself ten years ahead."

"You mean that you mapped out your life for ten years?"

"I mean exactly that. Had I failed to do so my whole future might have been different. It is a course that I believe in more firmly to-day than ever before, and one that I try to communicate to everyone who is working with me. In picking up thousands of life insurance salesmen I have always given the preference to the man who knows where he is going—the man who has a definite and reasonably distant goal. Progress never seems to wait on the piece worker."

"The piece worker?"

"Yes, the man whose 'piece' is a day eight hours long, and whose horizon never extends beyond it. The bigger achievements are measured in years, and they must be foreseen to be prepared for."

"What did you do when you decided to leave Glenwood?"

"We sold our home and moved to Omaha, twenty-three miles distant. The principal insurance offices in that part of the country are located there. I wanted to study them at close range. From the sale price of the house I put five hundred dollars in the bank as a maximum on which we could live until I could meet our expenses in my new work.

"I visited two or three of the insurance offices in Omaha. I'm sure I didn't make the slightest impression on anyone in these offices—and they didn't make the slightest impression on me. I was feeling my way carefully. Finally, one day on a railroad train I struck up a conversation with a fellow traveler. He asked me what

my business was. I told him I didn't have any business at present, but that I was planning to go into life insurance.

"Fine!" he exclaimed. "Why don't you tie up with my concern; and he named one of the smaller Middle-Western companies."

"I never heard of that company," I said.

"Then it's an even break," he remarked whimsically. "For I know they never heard of you."

"We both laughed, and I started pumping him with questions. What he told me interested me so much that I called on the Omaha manager of the company a day or two later. Before I left him I had signed a contract whereby I was to start work immediately on a straight commission basis. Without a word of instruction he handed me a neat bundle of forms and literature, patted me on the back, and wished me good luck. I found out afterward that he didn't expect much of anything from me."

"How did you make out?"

"For three weeks I didn't write a policy. The trouble was that I knew next to nothing about the business. But I set out to inform myself thoroughly. After talking with prospects all day I would sit up far into the night studying every scrap of information on which I could lay my hands. Slowly I mastered the answer to every question that stumped me. I dug out facts to stack up against every possible objection. I got a definite and complete vision of what insurance meant to the average man, woman, and child.

**F**INALLY, in Oakland, Nebraska, I wrote my first policy. It was for \$2,000 and I had to take the man's note for \$68.34—the amount of the premium. Rather jubilant at having broken the ice at last, I mentioned the sale to a banker who boarded at the hotel where I was stopping. He smiled sympathetically.

"I'd like to congratulate you," he said; "but you ran foul of the wrong man. That fellow's note isn't worth the paper it's written on!"

"I hustled down the street and hunted the man up."

"I want you to know two things," I said. "First, I've heard from one of this town's prominent citizens that your note is worthless. Second, I don't believe it's true. You've taken out this insurance to protect your family. They trust you and I trust you. I know that you will come through!"

"Did he?" I asked.

"You bet he did! He met the note promptly when it was due."

Once under full steam Davis shot ahead with almost incredible speed. Before the end of his first year of service the company notified its two thousand salesmen throughout the country of an important contest. A convention was to be held early in the autumn in the city in which the home office was located. At this conven-

**1** Crude rubber. Looks like dough, doesn't it? Several kinds of rubber are used, and to get the right results these varieties must be put together according to a recipe.

**3** The rolling pin outdone. It takes three men to work this one, which rolls the rubber into smooth sheets.

**2** This machine combines the different kinds of rubber. The principle is the same as with biscuit dough—to mix the ingredients thoroughly.

**4** Strips in the shape of a telephone receiver are punched out of the rubber. These strips, in pairs, with a mold between them, are then put into a closed baking pan.

**5** Baking on a grand scale. The chef who puts the receiver forms into an oven. The heat there would scorch a batch of home-made biscuit, but it's needed to vulcanize the rubber.

**6** The receiver case, baked hard to well protect the delicate mechanism it is to cover. It next goes through a finishing and polishing process to prepare it for your telephone.

## Made to a recipe, baked like a biscuit

**YOU** may be interested to know that the process for making your telephone receiver case is for all the world the way Mother makes her biscuit.

The pictures tell the story—one of many curious sidelights in the development of Western Electric telephones.

A fascinating work, but an exacting one. It demands constant testing of materials and improvement in design and the methods of manufacture.

The result? A telephone that is the standard the world over.

# What would you do in his place?

## The steeplejack lights his pipe and goes on painting

Imagine, if you can, a steeplejack 487 feet above the street level. Hanging on by his teeth he is applying a more or less rough-and-ready coat of paint to a flagpole.

Right in the midst of a busy morning's painting an adventurous bee buzzes into the picture. In fact, there are two bees, both buzzing viciously.

What should the steeplejack do?

There being in the profession no local rules for buzzing bees, your average steeplejack probably would get the all-clear signal from below and slide promptly down to safety.

But not Our Hero. He takes out his pipe, lights it, and goes on painting.

"It soothes the nerves," he says frankly about pipe smoking.

We have no way of knowing what kind of tobacco the steeplejack pours into his pipe on these bee-buzzing occasions, but we have a feeling that it is Edgeworth.

For Edgeworth does much to give the smoker a sense of calm, peaceful security.

Of course we wouldn't care to go on record as claiming that smoking a can of Edgeworth is as good as a two-weeks rest cure in the mountains; but we would like to register strongly the opinion that smoking any pipe makes life seem more worth living and that smoking a pipe filled with Edgeworth helps a lot.

If you are interested in finding out more about Edgeworth, the most sensible plan is for you to let

Larus & Brother Company send you some free samples so that you can try the tobacco for yourself.

Just write your name and address down on a postcard and you will receive immediately generous helpings both of Edgeworth Plug Slice and Ready-Rubbed. If you will also include the name and address of your tobacco dealer, we will make it easier for you to get Edgeworth regularly.

For the free samples address Larus & Brother Company, 25 South 21st Street, Richmond, Virginia.

To Retail Tobacco Merchants: If your jobber cannot supply you with Edgeworth, Larus & Brother Company will gladly send you prepaid by parcel post a one- or two-dozen carton of any size of Edgeworth Plug Slice or Ready-Rubbed for the same price you would pay the jobber.

tion two salesmen and their wives would be the guests of the company. One would be the man who wrote the greatest volume of business during the month of August. The second would be the man who turned in the greatest number of policies.

"Better get some new clothes," Davis told his wife. "You are going to be one of the two ladies in the case."

"But how can you expect to win out against two thousand salesmen, many of them with years of experience?" she asked.

"I haven't a Chinaman's chance to turn in the greatest volume of business," he replied. "But watch me go after the greatest number of individual policies."

DAVIS'S campaign through Iowa and Nebraska in the month of August, 1911, is still one of the classics of insurance annals. Working from morning until midnight, jumping from town to town by any transportation in sight, interviewing prospects at any hour and any place, he soon swept past all competitors in the Middle West. When the month's returns were totaled it was discovered that the Iowan not only led the sales force of the whole country but that he had shattered all existing records for the number of policies written in a single month. In addition to winning the contest, he was presented at the convention with a check for \$903—the largest prize bonus check ever paid by the company under similar conditions—and he was elected vice president of the star salesmen's executive council. Thus ended Frank Davis's first year in the insurance business.

Shortly after his return home Davis was commandeered to assist in picking salesmen for the Omaha district and instructing them in his own rapid-fire methods. He had been carrying on this work, in conjunction with his regular soliciting, when he was called to the home office and given charge of the entire state of Ohio, where the organization had slumped into the doldrums and business was almost at a standstill. His success here was notable. Within a few months he had rebuilt and inspired an effective and enthusiastic organization.

Although less than two years in the insurance business Davis was now making more than six thousand dollars a year, and he seemed just on the threshold of greater things. At this point, however, he took a step that was directly tied up with his decision of the year before—always to face the facts and act fearlessly on their evidence. During this period he had been making a careful study of the field of life insurance, and had decided that if he was to reach the goal which he had set for himself he must be associated with one of the larger companies—one whose operations covered the entire country. He realized that if he was to make such a change it meant a sharp immediate financial sacrifice, in order to secure a larger opportunity.

Once he recognized these facts he found himself churned by a conflict of emotions. He was enthusiastically happy in his work and making far more money than he had ever made before. His associates were all loyal rooters, and whenever he went to the home office the head officers of the company slapped him on the back and whispered of greater things to come. To offset all this, he had only his new-born conviction that his present association did

not offer sufficient opportunity for his growth and development. He fought a short and decisive battle with himself, which ended in his resolution to resign.

The next day he received a telegram summoning him to the home office.

"Hang up your hat and take a seat," called out the general manager, when he reported. "I've got some good news for you!"

Davis sat down.

"We've called you in," continued the general manager, "to give you the biggest opportunity we have ever offered any man. I have railroad reservations for you and your wife to proceed at once to Dallas, Texas. We're going to turn the entire state of Texas over to you, because we are convinced that it is the ripest and richest field in the country to-day. If you clean up down there the way you have elsewhere there's all kinds of prestige and money in it for you. Go to it, old man!"

With a lump in his throat as big as a walnut, Davis leaned forward and shook his head slowly.

"It's too late," he said. "When I got your wire I was just getting ready to come in, anyway—and offer my resignation!"

"Your resignation? What in thunder are you talking about?"

Davis explained how and why he had arrived at his decision. The general manager heard him through and then burst into a laugh.

"You're bilious to-day, Frank," he said. "Been working too hard, I reckon. Go back home and get ready to leave for Texas at once."

"You don't seem to understand," said Davis slowly. "I'm through. I'll stay any reasonable length of time, to clean up whatever may be hanging fire; but after that I'm leaving you."

"Go back to Columbus and quit your kidding!" was the general manager's only response, as he shoved him toward the door.

WHEN Davis reached home at midnight he was told that the long-distance telephone operator had been after him. He went to bed—only to be roused a half-hour later. It was the general manager calling up to say that the company wouldn't let him go under any circumstances. Davis repeated his determination—and hung up. Then he sat down in his pajamas, curled his toes around the rungs of his chair and spent the next two hours writing a long letter of resignation. He set forth in full his reason for leaving and tendered his thanks for all the consideration that had been shown him. A few days later Davis received a return letter, which finally accepted his resignation and paid a warm tribute to his services.

Davis's first step toward making a new connection was to write letters to nine of the largest mutual life insurance companies in the field, setting forth briefly his experience and asking if an opening was available. He received nine replies, several of which offered him immediate employment. The least favorable of all the replies was from the Equitable. And that was the one which Davis decided to follow up.

He came to New York and introduced himself to the superintendent of agencies of the Equitable. For three days the Middle-Westerner, of whom the officials had already heard interesting reports, was

## If you ever want to sell your house ARCOLA is a salesman

"I WISH to inquire how long it would take to get another ARCOLA, similar to the one you sold me last year, as I have sold my house," writes E. D. Saunders of Alton, Ill.

"Possibly you will be interested in knowing how the ARCOLA entered in the deal," he continues. "My neighbor and I owned houses adjoining, that were built by a housing company and *exactly alike*; both of us were trying to sell and a prospective buyer, after looking both houses over, paid me six hundred dollars more than my neighbor was asking, because my

house was hot-water heated by an ARCOLA and American Radiators."

ARCOLA is an investment on which it is *impossible* to lose. If you want to sell your home you discover that buyers are glad to pay more for a house with an American Radiator in each room. If you keep the house several winters ARCOLA's cost is entirely absorbed. It pays for itself in the fuel it saves.

Send today to either address below for a fine ARCOLA book. Life is too short for shivering; begin this year to enjoy radiator warmth.

## How Do You Can?

THERE are several ways to can, but the Oven Method is the one to be preferred. So says the U. S. Department of Agriculture in Farmers' Bulletin No. 203. Under the caption of "Canned Fruits Cooked in the Oven", the Government Experts have this to say:

"This method of canning fruit, in the opinion of the writer, is the one preferred. The work is easy and quickly done, and the fruit retains its shape, color and flavor better than when cooked in the preserving kettle."

But the Government Bulletin was written long before the advent of the Lorain Oven Heat Regulator, the wonderful device that exactly measures and controls the heat of the Gas Range Oven. And so, the Lorain Method of Oven Canning surpasses even the method recommended by the Government.

If you owned a Lorain-equipped Gas Range you could do many wonderful things in cookery. In the first place you'd never again experience a single failure in baking, roasting, etc. Also, you'd be able to cook a whole meal in the oven all at one time—while you're miles away enjoying yourself.

Wherever gas is available you'll find dealers who sell Lorain-equipped Gas Ranges. These dealers are always willing to explain or demonstrate the unusual advantages of this greatest of all time—and labor-saving appliances.

Send for a free copy of the Lorain Oven Canning Chart. It explains how to can 37 different fruits and vegetables by this new and better method.

shunted from office to office in order that he might pass under general inspection. At the end of the third day the superintendent of agencies sent for him.

"What do you want to do?" he asked.

"Anything," said Davis.

"Where do you want to go?"

"Anywhere."

"How soon can you leave?"

"Any time."

"How much compensation do you want?"

"Whatever you say."

"Haven't you the slightest preference about the kind of work you're turned loose on?"

"Yes, I have—if you put it that way," replied Davis. "When I mapped out my career a couple of years ago, I felt that I could make good in organization work. My short experience has encouraged me in that belief. I'd like to tackle the toughest and most unproductive territory you've got, and be given a free hand to build up my own organization."

DAVIS was handed exactly what he asked for. A certain slice of Northwestern territory, with its branch headquarters at St. Paul, Minnesota, was known as the company's "graveyard." A disjointed and discouraged organization was doing about \$1,500,000 worth of business a year. Davis went there—starting out in his new field at half the salary he had been making in Ohio.

He reached St. Paul just after the Christmas holidays, and plunged into his new job. Before he was fairly under way his wife was stricken with typhoid fever and for a time her life was despaired of. During each day he would make train trips to outlying agencies, help the local managers stage their campaigns—and then travel half the night in order to reach his wife's bedside. After a few hours' sleep he would plunge out early and repeat the procedure.

At the end of his first year in St. Paul the new pilot had doubled the sales in his territory. At the end of the second year he had shot them up to \$5,000,000. And in the meantime he had rebuilt his organization from top to bottom—dropping at least half of the agents he found and replacing them with fresh and untried timber.

His method of picking salesmen was typical. He never advertised for a salesman, either then or in any subsequent position he has held.

"Wherever I went," he told me, "I kept my eyes 'peeled' for individuals who handled themselves in a manner that convinced me that they had the makings of real salesmen. I found them in the most unlikely places."

"For instance, there was a laundry wagon driver who came to the house several times to try to persuade Mrs. Davis to give him our work. One day I happened to be at home, and he tackled me. There was an earnest persuasiveness about the man that was captivating. He believed that he was working for the best laundry in the city and he wasn't afraid to tell the world so. Furthermore, he knew why it was the best. I gave him our work."

"During the next month he called me up several times at the office to find out if we were pleased with the service. Presently I sent for him to come in and see me."

"What's your aim in life?" I asked him in the course of our chat. "What do you expect to be doing ten years from to-day?"

"I'll have a laundry of my own," he said. "And it will be a darned good one."

"No, you won't," I returned. "You'll be selling life insurance." And before he left the office I had him under contract. To-day he is one of the ablest life insurance salesmen in the Northwest.

"On another occasion I stopped overnight at a small town which was crowded with delegates to a convention. I finally squeezed my way into a 'shakedown' rooming-house above a pool room, where I had to share a double bed with a total stranger. The next morning we had breakfast together. Talk turned to business, and I found that my bedfellow was doing very nicely as a salesman of household utensils. I liked him—for he was a straight shooter, with a pleasing personality."

"Why don't you go into life insurance?" I inquired.

"Often thought I'd like to," he replied.

"Fine! You're hired," I told him.

"To-day that man is managing one of the largest agencies in the United States."

"Still another time I dropped into a music store to buy a phonograph. The young chap who waited on me impressed me so favorably that I purposely deferred the purchase in order that he might hand me some more sales talk. Then I asked him to lunch, and before we had got to the dessert he was an enthusiastic recruit. To-day he is one of our most successful men."

At the end of his second year in St. Paul, Davis was called back to New York.

"The Chicago district has gone to sleep," he was told. "It's doing only a third the business of Pittsburgh, and far less than half a dozen other smaller cities. We want to turn you loose there."

Davis's reorganization of the Chicago territory was a repetition in a larger way of what he had accomplished in St. Paul. He stayed there five years, during which he raised the total annual sales from six million to thirty million dollars.

In October, 1919, he was called to New York and put in charge of the sales force of the entire country. The following June he was elected second vice president of the company. These are the positions that he holds to-day, at the age of forty-two, only twelve years from the morning he took his first parcel of literature and set out as a green salesman. So rapid an advance to a place of so great authority has never been known in life insurance circles—or in few other businesses.

IN a hasty survey of the high lights in Davis's career I have thus far neglected to mention the characteristic that has aided preëminently in making him a leader of men—his vigorous, persuasive, kindly personality.

More than six feet tall and broad-shouldered as a champion wrestler, Davis packs two hundred and thirty pounds between the soles of his shoes and his wide brown eyes. Energy spills out all over him. He is said to have more friends than any other superintendent of agencies in the country, and he is in constant demand as an extemporaneous speaker before assemblies of insurance salesmen and insurance executives.

"Davis seems to have the quality of

## How lead keeps the wolf from your door

**L**EAD helps to protect you from famine. Even before the farmer plants his seed, lead is working to produce fertilizers. And each year your daily food supply grows more dependent upon the proper use of the fertilizers lead helps to make.

Lead is also the farmer's assistant while crops are growing and fruit trees are bearing. Indeed, the farmer would be greatly handicapped without lead, and this loss would be felt throughout the world in inadequate food supplies.

### Enriching the soil

Phosphates are the basis of nearly all artificial fertilizers. The phosphates mixed with sulphuric acid give one of the elements plant life needs. No lead enters into the fertilizer itself, but lead successfully resists the action of sulphuric acid. Hence it is used for lining the rooms and tanks in which the fertilizer-manufacturing processes are carried on, for making the pipes which convey the corrosive liquids, and for the pails and other containers used about the factory.

### Guarding fruit trees

Lead aids the farmer in protecting his fruit trees, vines, and truck crops. He sprays them with arsenate of lead to poison insects that would otherwise destroy them.

### Lead in batteries

The modern farmer's tractors, trucks and automobiles depend largely on lead. A storage battery, mostly lead, provides electric current for the

tractor's ignition system and for the starting, lighting, and ignition of truck and automobile. Lead-tin solder seals gasoline tank and radiator. Litharge, an oxide, is used in refining the gasoline that makes the tractor, truck, and automobile go.

Where the farm is isolated from central electrical plants, the lead storage battery provides power for lighting and for running farm machinery. In the generators which charge the batteries are bearings of babbitt metal that often contain lead.

Electric light bulbs and lamp chimneys throughout house and farm buildings are made of a superior lead glass.

### Painting with lead

As paint, lead helps to protect the farmer's house, farm buildings, and equipment.

Red-lead, an oxide of lead, makes a paint that guards the metal of his wind-mill and machinery against the attacks of rust and thus prolongs their usefulness indefinitely.

White-lead is the paint usually used for wood and other non-metallic surfaces on farms and throughout the world. Practically everywhere one

goes—on sea or land—he can see or touch white-lead paint.

More property owners than ever before are learning the value of the phrase, "Save the surface and you save all." They are thinking more of what proper painting will mean in protecting their investments than of the cost of applying the paint. They are, therefore, saving the surface with white-lead or at least with paint containing a high percentage of white-lead.

### Look for the Dutch Boy

NATIONAL LEAD COMPANY makes white-lead of the highest quality and sells it, mixed with pure linseed oil, under the name and trademark of *Dutch Boy White-Lead*. The figure of the Dutch Boy is reproduced on every keg of white-lead and is a guarantee of exceptional purity.

Dutch Boy products also include red-lead, linseed oil, flattening oil, babbitt metals, and solder.

Among other products manufactured by National Lead Company are bar lead, litharge, glassmakers' red-lead, lead pipe, battery red-lead, orange mineral, and die castings.

### More about lead

## Will Be Sent Without Cost

Eight ways to test the safety of your investments are given in this interesting booklet, "How to Select Safe Bonds." This important booklet (the coupon will bring you yours) has been prepared from the long and successful experience of George M. Forman & Company. Every investor, large or small, should know the facts it gives about getting a higher yield with positive safety.

# EIGHT WAYS to Test the Safety of Every Investment

### 1 Is Your Investment Protected by Property of Permanent Value?

"How to Select Safe Bonds" tells why investments should be protected by property having a permanent value well in excess of the amount of the entire loan.

### 2 Does Your Claim Command Payment Before Other Obligations?

"How to Select Safe Bonds" tells what securities come before all others in obligation to pay promptly and fully.

### 3 Has the Property Sufficient Earning Power?

"How to Select Safe Bonds" tells why a safe property must have an annual earning power of at least two and a half times the total annual interest on the loan.

### 4 Is the Property Adequately Protected by Insurance?

An important consideration, as fire often wipes out overnight a valuable property.

### 5 Is it Properly Managed?

"How to Select Safe Bonds" tells why proper management is essential to insure prompt payment of interest and principal upon maturity.

### 6 Is the Title Clear?

"How to Select Safe Bonds" tells a sure way of insuring against loss through faulty title.

### 7 What is the Moral Character of the Borrower?

As important as proper management—explained in this interesting booklet.

### 8 Who Offers the Securities You Buy?

"How to Select Safe Bonds" tells why even the experienced investor must depend for safety entirely upon the reputation and length of service of the Banking House offering the investment. It tells of the conservative policy of painstaking investigation and selection which has made it possible for George M. Forman & Company to sell bonds for 38 years without loss to a customer, large or small.

literally setting men on fire," one of his associates told me. "I have never seen him wind up a speech at a convention without bringing his audience to its feet in one wild howl of approval."

But it is a much less spectacular side of his nature that enables Davis to make friends and hold them. Not long ago one of the Western representatives of the company wrote that he was coming to New York to rest up for a few days from a severe illness. The train on which he was due to arrive was delayed for several hours and when it drew into the Pennsylvania Station, at two o'clock in the morning, the weary traveler staggered into the wide-open arms of Frank H. Davis, vice president of the company.

"There's a taxi just outside, and we'll have you at the hotel in a jiffy," he said.

Davis was taking a tiresome trip on a local Western railroad train a short time ago when the locomotive panted to a stop at a small station. A twenty-minute lay-over was announced. He followed the general rush to a wayside eating place.

In the same coach sat a little white-haired woman, who was evidently worn out by the long ride. Left alone, she dozed off for a few minutes. Presently she woke with a start to find a six-foot Samaritan standing beside her. In one hand he held a steaming cup of coffee; in the other were two fat sandwiches.

"I noticed you didn't get off, Grandma," said Davis gently; "and I thought that you might like a bite to eat."

The woman tried to smile, but two tears trickled down her cheeks.

"Bless your dear heart!" she said, her voice breaking. "I am 'most famished, but being so crippled up with rheumatism and sick into the bargain, I was afraid I'd be left behind if I tried to make it over to the restaurant."

ONE of the things that Davis continually preaches to his men is pride in their profession.

"If you don't think you're in the best business in the world, I don't want you to work for us," he has said repeatedly. "No man can swing his job right unless he believes in it. If you're unable to get thrilled over the prospect of human service—if you haven't an appreciation of the contribution made to the general welfare by an economically administered life insurance company, then it's useless to waste your time and mine."

Many stories are told of the way in which Davis lived up to this philosophy when he was in the field as a salesman. On one occasion he had made a definite appointment with an important business man. Arriving promptly on the minute, he was kept waiting in the corridor. Eventually the executive strolled out.

"What can I do for you?" he asked. "Make it brief."

"I can't talk standing up," said Davis, "and I don't intend to try. I have a definite appointment with you. If you see fit to keep your word and listen to the kind of service we can render you, I am at your command. Otherwise, I shall say good day."

The business man blinked. Then he held out his hand.

"You're right, my friend; come inside," he said.

Inside of three minutes Davis left the

office with a signed contract for fifty thousand dollars of life insurance in his pocket.

On another occasion Davis had spent the better part of an hour discussing life insurance with a professional man who seemed to delight in trying to "bait" him and to avoid a single direct answer.

"Why should I leave a big life insurance check to my wife?" the prospect said at last. "What assurance have I that she won't marry some ne'er-do-well, who'll blow it all in?"

"If you leave your wife an estate, she won't have to marry a ne'er-do-well the next time," Davis shot back.

"What's that?" The man jumped to his feet, bristling. "Do you mean to infer that I'm a ne'er-do-well?"

"Any man who talks that way about his wife certainly has the characteristics of one," said Davis calmly.

"Oh, I guess I didn't mean it the way it sounded," mumbled the man, slumping down in his chair. A few seconds later he signed the application blank.

WHEN I told Davis that I had heard these stories of his early days he shook with laughter.

"Yes, they're correct," he said, "but please don't carry away the impression that I adopt that attitude toward the average prospect. These cases were decidedly exceptional. Yet I wouldn't give a tinker's dam for a salesman who wouldn't maintain his self-respect and stick up for his rights if he saw that someone was trying to bluff or bulldoze him. If anyone attacked your family, or your religion, you'd certainly take up the cudgel in defense. Well, a man ought to have that same sort of sacred feeling about his job, too.

"It all comes back to the question of vision. If you're living piecemeal, if you can't see the whole pattern of the thing out of which you're making a living, your convictions won't be big and broad enough for you to bother about sticking up for them, anyway.

"You can't get anywhere without enthusiasm; but I have little use for the intermittent brand—the kind that bubbles over some things, fizzles out over others, and then starts in bubbling again. Continuous enthusiasm comes only when you see the far-away goal you are aiming for.

"When you once get working for you a man who is endowed with enthusiasm and vision and courage, the thing to do is to let him alone. I give my branch managers almost unlimited authority and responsibility—so long as they follow the broad fundamental principles on which we operate. I even allow my managers to fix their own quotas.

"I conceive it to be entirely reasonable that the man in charge of the state of Iowa, or California, or Massachusetts, knows a good deal more about the conditions in his territory than I can possibly know. Consequently, if he has the ability and imagination I credit him with, he can tell the amount of business available in that territory. If he were to set a figure that was absurdly low, I would know that he wasn't a 'good soldier,' or that he was lacking in business imagination. I have found out, however, that nine men out of ten, when placed on their honor, will shoulder a bigger pack than you would ever think of putting on their backs."

## A telephone personality

In your face to face contacts with people, your appearance, your bearing and many other things help you to make the right impression. But in your telephone contacts there is only one thing by which you can be judged—your speech.

An effective telephone personality is to-day a business and social asset. Everybody appreciates the person who speaks distinctly and pleasantly, neither too fast nor too slow, with a clear enunciation of each word, with lips facing the mouthpiece and speaking into it. In business, this is the telephone personality which induces favorable action on the part of the listener. To the salesman it may mean the difference between an order and no order; between an interview

granted and an interview refused.

Curiously enough, people who are careful to make themselves effectively heard and understood face to face, often disregard the need for effectiveness in their telephone speech. Perhaps they shout, perhaps they mumble, perhaps they hold the mouthpiece far from their lips. And frequently they never realize that their carelessness has defeated the purpose of their talk.

The Bell System maintains for telephone users the best facilities that science, modern equipment, skilled operation and careful management can bring to telephone speech. But these facilities can be fully effective only when they are properly used.

## Both are Capitalists

One man earns \$2,400 a year in a factory; the other \$25,000 a year as president of his company. Their paths never cross except at the window of the First Mortgage Real Estate Bond House where they make their investments.

The investor buying these bonds in amounts of \$500 or \$1000 is as truly a capitalist as the large investor who purchases in \$10,000 lots.

The American Bond & Mortgage Company welcomes one investor just as heartily as the other and the record of this house has won the confidence of both.

During the many years we have been in business thousands of investors have purchased from us many millions of dollars of First Mortgage Bonds secured by improved city properties, and without the loss of one dollar.

We now offer for sale an issue yielding 6½%, and as this has already been placed on sale, we advise you to write at once for full information about this attractive investment.

**WATERFORD**  
The Disappearing Propeller Boat

the very sort, perhaps, to appeal to a serious and inexperienced girl. He called himself an Englishman; he went in the best society; he was a leader everywhere; he had a fine position, kept a splendid establishment, was known as a perfect host and a charming companion.

"What was it, then, that I'd felt when this lovely girl had jumped up so eagerly to go off with him? What was it that Lee Fu had instantly recognized in my question? For my part I couldn't say, except that there were subtle things I didn't like about the man. As head of the largest German house in Hong Kong, for instance, why did he continue to pose as an Englishman? All his connections were mid-European. An Englishman of sorts he was, of course; yet it was whispered that he had a Turkish mother. His past was shadowy, a period practically unknown. I myself could remember the time when he had appeared in Hong Kong full blown, as it were, a man without a record but with a backing mysteriously substantial.

"I have nothing against him," I announced at last. "I'd like to know where he came from, that's all."

"You are mistaken," said Lee Fu sharply. "That is the last thing that you would like to know."

"I raised my eyebrows. 'You've run him down, then?'"

"Lee Fu nodded slowly, holding me with a flat gaze that managed to convey a depth of meaning. I waited to be told, but he remained silent. Behind the flat gaze I saw the marshaling of thoughts.

"So he isn't fit to marry her?" I observed.

"EXACTLY," said Lee Fu. "Let us start, of course, from the assumption that there is no man in the world fit to marry her. She only may choose the least unworthy. But in this case, she has not so chosen. You must be satisfied that I know what I know. The match cannot be permitted. This decision is final, and allows of no compromise."

"I pursed up my lips in a silent whistle. It must be pretty bad! 'Is she very much in love with him?' I asked.

"She is infatuated. Whether that is love, remains a problem of the ages. Because sometimes it is love, and sometimes it is not; sometimes it may become love, and sometimes it may turn to the bitterest hate. A given thing sometimes will turn it one way, sometimes another. Thus, in spite of untold experience, there is no precedent."

"That makes it fairly difficult," I murmured. "And I recall that she used to be a headstrong chit. Have you taken the matter to Amesbury yet?"

"Hardly!" exclaimed Lee Fu. "He knows, of course, but perhaps is too ill to realize. Yet I doubt if he would raise objection; in his eyes she can commit no error. The father is too near, my friend; it is the godfather who has the thankless task of seeing clearly. She guesses that I disapprove of her lover; she has asked me candidly what I know against him.

It was a painful question for me; I fear I did not acquit myself too well. Now, as you see, she keeps us apart, and I have lost her confidence."

"You didn't tell her anything about him?"

"No, I am not a fool."

"But why should she ask you, if she hadn't begun to doubt?"

"I am inclined to agree with you," replied Lee Fu. "Yet that, too, is highly dangerous. Infatuation feeds on doubt."

"But isn't there some young man handy who can take her away from him?"

"There is one who would, but cannot. Also, he is a man of her own way and kind. I speak of Captain Trowbridge of the ship 'Defender.'"

"THE very god from the machine!" I cried. (I'd met young Trowbridge the year before, on his first voyage to the East as master, and had been strongly impressed by him. One of your genuine, angular down-Easters, straightforward and open as the day.) "Is Trowbridge in Hong Kong?"

"Yes, he is here. It is one thing to produce the god from the machine, and another to set him going. For my part, I think it would be better if Captain Trowbridge were elsewhere. He alienates her daily by an immutable devotion."

"I see."

"It was a pretty mess, indeed, with all the elements of danger if not of disaster."

"During the next few weeks I had ample opportunity to observe the romance from many angles. Amesbury was better, but still confined to the ship. One was forever running across Minnie with Cavendish, chaperoned by some gay widow, at tiffin at the Hong Kong Hotel, at afternoon tea at the Yacht Club, or at dinner aboard a member of the fleet. Even if I went for the view along Glenealy Road, I'd be apt to meet them riding in two chairs under the tall bamboos."

"As I continued to meet them, I got the disagreeable impression that Cavendish accepted her too carelessly. It was quite the finest adventure, no doubt, that ever had come into his life; but he was going over familiar ground. I cultivated the man's acquaintance, I tried my best to fathom him; I had to admit that he conducted himself with strict propriety; yet I grew to regard him at last with an unreasonable aversion."

"I cultivated young Trowbridge, too, a simpler and sweeter proposition. He was the sort of chap who grows on you, a man full of character, who had pulled himself to the top of the ladder at the age of twenty-seven. Before I'd known him long, I realized that if Minnie would give him half a show she'd find that she liked him tremendously. Beyond question, he was just the man for her; he, too, loved ships and the sea. But he had begun wrong. His doglike devotion, as Lee Fu pointed out, had done the rest."

"Stop hanging around her," I told him one day, as he started after Minnie up the Jetty. By this time he'd confided all his woes to me.

"But she's alone," he snorted. "I don't hang around her, anyway."

"You stand and gaze at her like a dying calf. You have no savvy; you don't use ordinary common sense. Can't you see that you lose a trick every time?"

"What's the use?" he demanded. "Do you mean that I ought to keep away from her?"

"Entirely out of her sight. I can't promise that it would be any use. But take it from an old fellow, the thing you're doing now is plain suicide."

"AFFAIRS drifted on, as they have a way of doing. The longer I watched Minnie, the more I became convinced that she wasn't entirely happy. One morning in Lee Fu's office I opened up the subject. 'Are Minnie Amesbury and Cavendish engaged?' I asked.

"I cannot say," Lee Fu answered. "What does it matter? There is no further need for worry on that score."

"No further need for worry? Has anything happened?"

"Nothing. But I was thinking of the imponderables."

"I laughed cynically. 'It strikes me they're up against an imponderable. You said the match mustn't be permitted.'

"Then who permits it? . . . Captain, do I remember that you often go to the Yacht Club to observe the swimming?"

"Why, yes," I answered.

"Have you noticed the expertness of Mr. Cavendish at that sport?"

"Cavendish? He's always there; but now that you speak of it, I don't believe he swims. I've never seen him in the water."

"Strange, is it not, for such a sportsman? Yet perhaps he is more interested in yachting?"

"He doesn't go into the races, Lee Fu. I was a judge at the last regatta, and know all the boats. What are you driving at?"

"The Chinaman leaned toward me, an incomprehensible gleam in his eyes. 'I have made a discovery,' he said. 'Even Achilles, you will remember, was not invulnerable.'

"Don't expect me to ask," I laughed. "I know you have no intention of speaking what's on your mind."

"Be patient, Captain," he answered, as I went out the door. "We must wait now for the monsoon to change."

"Whatever he meant, the monsoon in reality was on the point of changing. I moved the 'Omega' to Wanchi anchorage that afternoon. Going down the harbor, I saw that the calm season of southwest breezes was over; at any moment we might expect the annual blow that brought the wind around into the northeast. It struck at midnight; I went on deck to see how she was riding in her new berth, and found quite a sea on in that part of the harbor. At daylight it was blowing half a gale.

"For a number of reasons I had to go ashore; at nine o'clock I called my sampan, which had been making easy weather of it under the stern. She was an excellent seaboat, as all Hong Kong sampans are. Under a few bamboos of the foresail, we ran down in short order the three or four miles that now separated me from the main fleet, and hauled up with a dash in the lee of the Jetty.

## Why Accept 4% When You Can Get 7%?

If your money is earning only 3½% or 4%, you are getting only half or a little more than half as much as you should be getting. Maybe you think that your present method of putting money out at interest is safer or more convenient than other methods, or you like to know that your interest is compounding every six months.

When you buy Miller First Mortgage Bonds, yielding up to 7%, you buy safety first of all. If you are seeking convenience and compound interest, you should know that you can buy Miller Bonds in amounts from \$100 up, or you can invest on the partial payment plan, as little as \$10 a week or \$10 a month. By applying the interest you receive toward paying for your bond, you compound your money. "Yes, I'm Getting my 7%" is the title of an investment story telling of one man's experiences with Miller Bonds. Write today for a free copy.

"First—The Investor's Welfare"

"It was nearly noon when I got around to Lee Fu's office. 'Well, the monsoon has changed,' I said. 'Can you tell me your discovery?'"

"All is arranged, Captain," answered Lee Fu briskly. "The guests are invited, and have accepted. They think it an odd whimsy of yours, yet all have entered into its spirit save Mr. Cavendish, who in his heart curses you with direst maledictions, but is obliged to come. Our Sailor Boy is delighted. Captain Trowbridge was difficult, but at length agreed to lend his presence. These, with our old friend Captain Spaulding, to whom I have made partial explanations, and ourselves, of course, comprise the party. It remains only for me to thank you for the pleasure which I anticipate."

"What the dickens is up now?" I demanded.

"EXACTLY what I said. To-night on board the bark 'Omega,' at Wanchi anchorage, you give a farewell dinner for Mindoro Amesbury. The weather is rough, so we are starting at three o'clock from the Jetty, in order to enjoy the sail. Here is the dinner in this basket, an excellent one, I assure you. I have even provided a sampan for the occasion."

"I don't pretend to understand," I said. "But, Lee Fu, it'll be a dead beat up the wind, a wet, nasty trip."

"The Chinaman rose behind the desk with a rustle of embroidered garments. 'I have told you once,' he said in a tone of quizzical despair. 'You must be wilfully stupid. But listen again. All men who live as Cavendish has lived are cowards. He is a coward, in every relation of life; but most of all he fears the water. The rest he is able to conceal, by careful sportsmanship, by irreproachable behavior. But this fear overwhelms him; he dare not trust himself with it, for it reveals what he is. Are you aware that he will not set foot in his steam launch unless the sea is calm? It is a study in the psychology of terror. I have sought desperately for this key to his character; it was necessary that she behold the truth rather than be told. She has seen him always safe on land, protected by his environment, clothed in the mantle of his faultless aplomb. But perhaps, with luck in our favor, we will be able to show her the true Cavendish.'"

"Nonsense, Lee Fu," I cried. "If he's so timid, he'll simply play sick and stay away."

"Not so. I myself have called upon him. He will come."

"You threatened him with exposure? But if you have power over him, why didn't you break up the match long ago?"

"The real problem is to break up her regard for him."

"Well, this point was sound enough, but the rest of the plan seemed utterly fantastic. It was a long while before I'd consent to abet the scheme."

"I was agreeably surprised when we gathered at the Jetty that afternoon to find the party in a lighter mood than I'd anticipated. The trip was taken as a lark, and I came in for a good deal of chaffing. 'A handsome day for a sight-seeing expedition,' laughed Spaulding, of the 'Tam o' Shanter.' 'I haven't been at Wanchi anchorage for years.'"

"Don't put on airs," I retorted. "Wanchi is heaven compared with some

of the places a poor trader has to go."

"Minnie arrived with Lee Fu, and soon infected us all with her high spirits. She loved nothing better than a sail in rough water. 'You're a dear to give me a real sailor party,' she greeted me. Then she caught sight of Trowbridge coming gloomily down the pier. 'Why, Captain Trowbridge, I haven't seen you for an age!' she cried. 'Where have you kept yourself?' He gave her a hangdog grin."

"Last of all came Cavendish. I watched him narrowly. If Lee Fu's discovery amounted to anything, the man was holding himself well in hand. As he glanced to windward across the angry harbor I thought that he turned a little pale; perhaps, too, there was a trace of nervousness in his manner. But on the surface he was the same debonair and confident fellow."

"We boarded the sampan at once, put on the oilskin coats that we found in the cuddy, arranged our seats, and were off. The craft that Lee Fu had provided was an ordinary harbor sampan, smaller than mine and not so well equipped; she was manned by a fat old Chinaman, his withered wife, a married son, a younger boy, the wife of the married son, and a child five years old. I wondered why Lee Fu had chosen such an outfit."

"The moment we poked our nose past the end of the Jetty, the sampan caught the gale and buried her lee rail under water. The sea was a nasty chop. All of us fell silent, feeling out the boat, as a sailor will, and forming an opinion of how she handled herself. All of us but Cavendish, that is to say. I suddenly thought of him; and a strange thrill went through me to discover him crouched back in the corner of the seat beside Minnie, palpably using the whole effort of his will to control his emotions."

"NOW it was heavy weather, no doubt, the sampan wasn't of the best, and the fat Chinaman evidently was a poor sailor; yet we weren't in the slightest danger. It's hard for a seaman, however, to imagine the state of mind of a land-lubber on the water, the apprehensions of one who has no guide or experience. And here was a man—I began to see it now—who added to ignorance of nautical matters a fear of the elements neurotic and ungovernable."

"For instance, it didn't occur to anyone to reassure Minnie Amesbury; least of all did she think of such a thing as needing to be reassured."

"Isn't it fun!" she cried, watching the waves swirl past to leeward as the sampan heeled sharply to the rising wind. "I don't know when I've had such a glorious sail, Captain Nichols. These Hong Kong sampans are so easy in a seaway." She turned to Cavendish, puzzled by his tense silence. "Don't you love a sail like this?" she asked enthusiastically.

"I hate it!" he rapped out harshly, putting a trembling hand across his mouth.

"The answer cut her; everyone had looked up in surprise. She gazed at him coldly for a moment, then got up and left the cuddy, taking her stand on the main deck to windward of the mast. In a moment Lee Fu followed her."

"We'll catch it yet!" she laughed, swaying her body to the rapid motion of the sampan, meeting the spray with-

out flinching as it flew over. At such times she seemed the very embodiment of the sea's spirit. 'It's breezing on every minute, Lee Fu. But what's the matter with your sampan-man? He doesn't know his business.'

"Then why not take the tiller yourself," Lee Fu proposed. In point of fact, the sampan was being steered atrociously.

"I'd like to," she exclaimed. 'May I, Lee Fu? I've never steered a sampan.' Her voice revealed more than she knew or intended; she longed for action as a relief from thoughts and feelings.

"Certainly. I will arrange it. Come through the cuddy."

"She passed by Cavendish without a glance, and emerged on the little deck abaft the cuddy. Lee Fu spoke to the fat Chinaman, who grinned and gave the tiller into Minnie's hands. At another word of command he squatted to leeward. Lee Fu at once returned to the main deck, where Trowbridge, Spaulding, and I now joined him, leaving Cavendish alone in the cuddy.

"The sea was rising fast as we opened up the long reach of the harbor. The sampan labored heavily, burying her nose with every plunge and flinging the spray in sheets across the deck. But in spite of this, she sailed better under Minnie's guidance; I realized again the innate seamanship of this slip of a girl. Here she was, steering a craft she'd never seen before; she had taken the helm, too, at a hard time, when an error might have spelled real danger. But the behavior of the sampan showed her instinctive mastery. Watching her as she steered, her body bent to the pull of the tiller, her hair flying loose, her face glowing with ardor and determination, one realized that these were her native elements.

"I saw Trowbridge looking long in her direction.

"FROM where she steered, Minnie could see Cavendish plainly through the rear of the cuddy. Now and then she glanced at him in perplexity. What could she make of it? He sat as we had left him, huddled in the corner, staring straight ahead and shuddering at every jump of the sampan. Suddenly he got up and started to come on deck. Lee Fu anticipated the move, and held him back.

"No, it is wet here," he said suavely. 'You are feeling ill, Mr. Cavendish. If you need the air, you will be better on the after deck. Come, I will assist you.'

"Before Cavendish could collect himself, Lee Fu had ushered him through the rear of the cuddy to the little section of deck directly under Minnie's eyes. There he left him without a word. Cavendish gave a frantic glance at the heaving water, then turned away without looking at Minnie, leaned his elbows on the roof of the cuddy, and covered his face with his hands.

"What is the matter?" Minnie asked anxiously. 'Are you sick?'

"Without answering or changing his position, Cavendish shook his head. He was too distraught to seize the open opportunity.

"In a short while we tacked ship in a smother of spray, and stood across toward Kowloon Point on the starboard tack. The crew of the sampan, men, women, and children, hung to the weather

Resources more than \$500,000,000

# Why not settle, once and for all, this question of Correct

**L**ET us show you exactly why your Ford engine operates best on a clean-burning oil, such as Gargoyle Mobiloil "E."

First, you pour in the oil. Your Ford manual tells you to open the top pet-cock on the oil reservoir, and to pour oil into the filler until it runs from this top pet-cock.

Suppose you pour in an oil *heavier* than "E." It is easy to supply too much, unless the oil flows out freely when the upper pet-cock level is reached. Heavier-bodied oils flow sluggishly. Consequently there is a danger of over-supply.

## (POINT 1)

*When you pour in Gargoyle Mobiloil "E," it runs out at once when the oil is up to the pet-cock level. The correct oil level is obtained with CERTAINTY.*

But possibly you do not think that this over-supply of oil makes any difference. Well, let us see what happens.

You notice that there is no splash trough for the rear cylinder. It is lubricated by the fly-wheel splash. (The third cylinder also receives some of this splash.)

If there is *too much* oil in the reservoir, there will be too much oil splashed to the third and fourth cylinders. From the cylinder walls this excessive amount of oil reaches the combustion chambers where it is burned up.

With an over-supply of oil heavier than "E," don't be surprised if you find extra heavy carbon deposits in these rear cylinders.

## (POINT 2)

*The exceptionally clean-burning character of Gargoyle Mobiloil "E" minimizes the tendency toward carbon formation in the combustion chambers.*

Next let us look at the connecting rods and splash troughs. Cylinders 1, 2 and 3 are lubricated by the dipping of the connecting rods into the troughs underneath. Remember that these connecting rods have no oil holes, no oil grooves, no dippers. To lubricate the friction surfaces the oil must work its way through the close clearances between the ends of the bearings and the crank cheeks, and then distribute itself over the bearing surfaces.

## (POINT 3)

*Gargoyle Mobiloil "E" is sufficiently fluid to reach and lubricate these surfaces with ease. An incorrect or heavier oil very often does not.*

Next, let us consider the pistons. The Ford pistons over-run the top of the cylinder bore. Consequently, any oil carried up by the piston rings is forced into the valve chambers. A heavy oil does not burn up readily, but remains to gum the valves.

## (POINT 4)

*Gargoyle Mobiloil "E," being a clean-burning oil, is readily consumed and expelled. It does not remain to foul the valves, seats, and stems.*

The Ford multiple disc clutch runs "wet"—is continually in a spray of engine oil. All manufacturers of this type of clutch recommend an oil which will

# VACUUM OIL COMPANY

# Lubrication for your Ford?

give positive, quick engagement with no slipping, and an instantaneous release.

Heavier oils used in Ford engines cause a drag between the clutch plates. "Creeping" is the result. The car starts ahead when the engine starts, although the clutch is released.

## (POINT 5)

*Gargoyle Mobiloil "E" gives positive and immediate clutch engagement and disengagement. There is no "creeping."*

Just a word about the transmission. In the Ford you have a Planetary transmission employing three close-fitting sleeves, mounted on an extension of the crankshaft. A heavy-bodied oil is not well adapted to work into and thoroughly lubricate the sleeves and bearings.

## (POINT 6)

*The body and character of Gargoyle Mobiloil "E" enable it to distribute thoroughly and meet this lubrication need perfectly.*

As to the transmission gears: There are three sets of triple gears mounted on close-fitting pivots. These gears are bronze bushed. The bearings fit tightly—in fact, so tightly that oil heavier than "E" is handicapped in working into and correctly lubricating the bushings and pins.

## (POINT 7)

*Gargoyle Mobiloil "E" is of such body that it freely creeps in between the close-fitting parts and thoroughly lubricates the gears and bearings.*

Chattering of Ford transmission bands comes from incorrectly adjusted bands or worn out linings, and is aggravated by unburned fuel mixed with the lubricating oil. In such cases the diluted oil should be replaced with fresh oil and the bands correctly adjusted or the linings renewed. To attempt to remedy such mechanical conditions by the use of so-called "anti-chattering oils" containing foreign

materials which may separate, or lard oil, wool grease or other animal fats which decompose under heat, is obviously wrong and likely to cause gumming of the valve stems, carbon deposit and other troubles.

## (POINT 8)

*Gargoyle Mobiloil "E" is free from foreign material and animal fat. Its use and proper attention to the adjustment and renewal of the bands will give the greatest possible freedom from chattering. At the same time it will correctly lubricate the engine.*

This concludes our trip through the Ford lubrication system.

AFTER careful consideration of the above Ford characteristics the Vacuum Oil Company's Board of Engineers saw plainly the need for a free-flowing oil of high quality, and with minimum carbonizing tendencies.

To meet these exacting needs of the Ford engine, clutch, and transmission, Gargoyle Mobiloil "E" is manufactured.

The results secured by Ford owners through the use of Gargoyle Mobiloil "E" is ample proof of the high quality of this oil and the correctness of this recommendation.

Put Gargoyle Mobiloil "E" in your Ford today.

## FAIR RETAIL PRICE— 30c A QUART

When the dealer sells a quart of Gargoyle Mobiloil for less than 30c, he does not make his fair, reasonable profit.

Lower prices often accompany substitution of low-quality oil for genuine Gargoyle Mobiloil.

Prices are slightly higher in Canada, the Southwest, and the Far West.

1000 N. 10th St., Chicago, Ill.

confidently on his shoulder. I heard a chuckle at my side.

"They are too much excited to note how well the youngster floats," said Lee Fu to Spaulding and me. "Then let us make a solemn compact never to raise the question. This bath cost me fifty dollars in gold, my friends."

"Cavendish, who had come to his senses after the blow, was muttering and moaning in the cuddy. I went down to see what I could do for him. Glancing aft through the door, I noticed Minnie Amesbury getting ready to bring the sampan about. She commanded the situation; she had before her the task of picking Trowbridge up—while Cavendish lay here, beaten and dishonored. Was it imagination, or did I see on her set face an expression of relief, the grimness of a painful but glad awakening, as she matched her hand and eye against a sailor's responsibility?"

LINCOLN COLCORD, writer of great sea stories, gives you next month a fascinating account of his own life. Born in a storm at sea, he spent his first fourteen years on his father's ship, and out of thrilling adventures and the vastness of the sea he learned, he says, "those lessons which are still my ultimate test of life."

## Number Nine Schoolhouse

(Continued from page 45)

"opened school," times without number, so she would close it—for the last time.

"Our Father which art in Heaven..." her voice came tremulously, "Hallowed be Thy Name..."

When the shortening September day ended, the depot bus took its load away in time for the down-train. The other cars were started, one by one. Miss Malvina would not let anyone take her up the hill.

"I'm just going to sit here a spell," she insisted. "...I want to think it all over, by myself."

Mary Emma and Sam came back, after a while, and looked in at the window. But when they saw her sitting happily at the old desk, piled with the letters and telegrams it would take a day to read, they went softly away without disturbing her.

No longer did Miss Malvina feel alone in the world. These strange men and women had by no means forgotten her. What did it matter if she couldn't teach now, if there was nothing left to do but sit in the sun and dream?

Her arm brushed against the great loving cup, ripping it over, and she saw that there was a paper inside. She pulled out a long legal document. Unfolded, her astonished eyes saw that it was a deed, the deed of the school-house, Number Nine, made out to her. The town had sold it at last. *It was her own property!*

Then she realized that she was crying! "I guess the Lord knew what he was about when he made folks so's they could cry," she said. "I would be a terrible pity if they couldn't, when they feel the way I feel now."

## SUNDSTRAND saves MORE TIME with LESS EFFORT

THOUSANDS of concerns have never found a fully satisfactory adding machine. Some have missed one feature—some another. Many have wanted a simpler, smaller, lighter design.

The Sundstrand gives business these and other long wanted features. That is why Standard Oil Company, Sears, Roebuck & Company, International Harvester Company and many other leaders use 15 to 100 each.

Sundstrand is light in weight, convenient in size, easily carried to any desk or job. Simple 10-key operation is an outstanding advantage. It speeds work for beginner or expert.

One hand control is a Sundstrand creation. Left hand is free to follow column of figures or turn checks.

Automatic column selection is another Sundstrand advantage. Units are automatically placed under units, tens under tens, etc., without waste of time or effort.

There are also advanced correction and protection features never before found in an adding machine.

Eight years ago the Sundstrand was a new conception—an epoch-making achievement. Today it is a proved success. It changes all ideas of what a modern adding and figuring machine should be. "The re-orders tell the story."

Ask us for leaflet "Testimony."

## Bakertone for Phonographs

It's the scratching, grinding, rasping sound that makes so many otherwise good phonograph records undesirable. BAKERTONE is a little gold plated attachment. It fits any needle point phonograph and is scarcely more than one inch in length. It kills 95 per cent of the surface noises and sells for only \$5.00. Your dealer probably has it, but if not, order direct and send us his name. You can have your money back if you don't like it.

BAKERTONE Corporation

Room 603 C  
Peabody Bldg.  
Buffalo, N. Y.

## Fishing?

You may not get any fish, but you'll get a wondrous appetite; you can be sure of that.

And you'll be ready for the lunch; that appetite will demand something good, something substantial.

The one best bet for any lunch is Kraft Cheese (in tins). We do not believe anyone can make cheese that has more real goodness and flavor—no one ever has. And best of all, it is chuck-full of nourishment. There's a square meal in that little round tin.

Take it anywhere, fair weather or foul, it's safely sealed in the parchment lined tin, so it's always decidedly cleaner and fresher. There are eight kinds, all good.

No rind—it spreads. No waste—100% cheese.

## There Are "Big-Town Birds" and "Small-Town Birds"

(Continued from page 25)

became a matter of wheeling the baby up and down the river front in the afternoons and hurrying back to get supper at night. After a few months I took on a three-nights-a-week job at seventy-five dollars a month, keeping books for a firm of architects.

When Jim, Junior, was about six months old my sister visited us. Her husband has an insurance agency in our hometown which gives him an income of about four thousand dollars a year. They are paying for a little home, and have two babies and a car. She was full of gossip about folks back home. The Joneses had just bought a lot and were planning to build. (Bill Jones was one of the dullest boys in my class at night school, but he seemed to be bright enough to make a good living back home.) The Emersons were expecting a new baby, their third. (Helen and I, knowing the cost of one baby in New York, could hardly conceive of wealth enough to support three; yet my sister said that Ted Emerson was earning less than I.) A new addition was being built on the country club, and the dues had been reduced to fifty dollars a year so that all young couples might come in. Three times while she was with us we left little Jim with the folks across the hall and went out—twice to the theatre, and once, Sunday morning, to hear a famous preacher. We were determined to show her that we were having a wonderful time. Apparently we succeeded.

"Oh, we envy you back home, all right," she said on the last day. "We often talk about it. You have all the new plays and the wonderful music and sermons. You're a couple of lucky babes in the woods all right. Still, we aren't complaining," she added as an afterthought; "we have pretty good times, too."

WHEN I got back to the apartment that evening, after putting her on the train, I found Helen sitting alone in the dark. I turned on a light and sat down on the arm of her chair.

"We're a couple of lucky babes in the woods," I repeated, stroking her hair. "All the new plays and wonderful music and lectures and—"

"Don't, Jim," she cried, leaping to her feet. "Don't! I can't stand it."

Without another word she started for the bedroom. I saw there were tears in her eyes.

That week I hired a nurse. Even with the extra money that came to me from the architects we couldn't really afford it, but I was determined that Helen should not be shut up any longer. She protested a little, but I was firm; and in the next few weeks the color came back into her cheeks and the baby was apparently healthier and happier. Certainly he cried less at night. I tried not to let her suspect that the night work was having any effect on

## Beautiful Walls that Resist Damage

**WALLS** of Compo-Board are walls of strength. They will not crack, crumble, shrink or buckle. They keep out dampness, and insulate the rooms against heat and cold.

## Compo-Board

**WOOD CORE WALL BOARD** makes beautiful finished rooms. Extra expense for panel strips is unnecessary. It can be decorated with wall paper, burlap, canvas, paint or kalsomine.

Compo-Board Joint Filler is especially prepared for filling cracks and nail heads.

Compo-Board is the original wall board—made for 20 years. Be sure you get the genuine—look for the wood core.

### Only A Love Of Flowers Is Needed

to make your home and garden beautiful with blooms from our imported Dutch bulbs. Amateurs vie with experts when Elliott bulbs are used. You can easily fill your house with color and fragrance from Christmas to Easter, or you can shower your garden with loveliness when Spring drifts up from the South.

### Dutch Bulbs—The World's Best

The bulbs we import from Holland, where the world's best bulbs are grown, are selected from the stocks of the leading growers there. Tulips, Hyacinths, Narcissus and Crocus of matchless beauty spring from these famous Dutch bulbs, which generations of expert breeding have brought to perfection.

### Special Prices If Ordered By July 1

For a few cents each you can grow flowers which at a retail shop would cost \$1 or more per plant. But we must have your order by July 1, when our books close and our special representative leaves for Holland to make selections from the bulbs of the most famous growers there. Pay on delivery. Money back if shipment is unsatisfactory.

### Special Combination Offers NO MONEY DOWN

#### Offer A—\$5 Household Selection

50 imported Dutch bulbs of the finest quality—Tulips, Narcissus and Hyacinths unequalled in hardiness and beauty; scientifically selected by experts for growth indoors. At small cost you can fill your home with gorgeous color from Christmas to Easter.

#### Offer B—\$5 Garden Selection

A careful selection of 50 of the world's choicest Dutch bulbs—Tulips, Hyacinths, Narcissus and Crocus so exquisitely perfect that when they bloom in your garden next Spring they will be an unfailing delight to you and your neighbors.

### Fascinating Catalog Free

Our new Catalog of imported Dutch Bulbs contains thousands of varieties—many reproduced in color—special price lists and directions for obtaining the best results. Write for catalog and order bulbs at once.

### Going Camping?

Let the Kampkook supply the home cooking convenience of your gas stove.

**It's All Inside**  
Compact and handy to carry. When not in use all parts pack inside case, protected against loss or breakage.

**KAMPKOOK**  
THE IDEAL CAMP STOVE

Set up and going full blast in a jiffy. Makes its own gas from motor gasoline. Burns a hot blue flame; no smoke, soot or odor. Simple, dependable, wind proof, safe anywhere. Used by a half million campers. Six styles; \$7.50 to \$15.60. Write for catalog of Kampkooking necessities.

American Gas Machine Co., Inc.  
836 Clark St., Albert Lea, Minn.

me, but you can't hide much from a wife—at least not when your whole life is spent in a kitchenette apartment. One evening at supper, when I just couldn't carry on the pretense of eating, she leaned across the table and took hold of my hand.

"I saw Mr. Mason to-day," she said quietly. Mr. Mason was the lawyer for whom she had worked before our marriage.

"That so?" I answered, suspecting nothing. "How is he?"

"He's all right," she continued, "and I'm going back to work for him on the first of the month."

"Helen!" I cried, and jumped to my feet. "You don't mean to tell me—I don't believe you're serious—"

She met my look firmly.

"I was never more serious in my life. Do you suppose I'm going to stay at home here and see you killing yourself?"

"But what about Jim, Junior? He's your first job. He has a right to a mother. It isn't fair."

"He has a right to a father, too," she answered; "and he won't have one long if you keep to night work."

IT WAS our first real dispute and it lasted long into the evening, interspersed with some tears, a few hot words, and plenty of apologies and forgiveness. But it settled nothing. She was just as determined at the end that she would go back to the office and I was equally determined that she should not. How it might have ended I hardly know; but Fate took a hand in it before the end of the month and swung our lives into a new channel.

It was about eleven o'clock and I happened to be sitting at the desk of the assistant vice president, who was downtown attending a meeting, when I heard my name spoken in a familiar voice and looked up to see the president of the Citizens Trust Company, the best bank in our little old city. He had come in to invite me to lunch with him, and I went. He is one of the finest old fellows in the world, a lifelong friend of my father, and the hour we spent together over our luncheon was like a visit home. When the coffee was served, he pulled out a couple of large fat cigars, tossed one across to me, and drove straight to the point.

"Jim, we want you to come back to the Citizens as cashier," he said.

"Why, Mr. Thorne," I exclaimed, "of course I'm flattered; but—"

"I know what you're going to say," he interrupted. "You have a fine chance with the big bank down here." (That wasn't what I was going to say at all, but I didn't confess that to him.) "This is the place to make money, of course; probably you're making more right now than we can afford to pay you. But there are some nice things about the old town, Jim. Your father and mother would be glad to have you back with your youngster."

That afternoon I telephoned Helen to come down to dinner, and the three of us talked the matter over again. The upshot of it was that we decided to accept. So, as I said at the beginning, we are back here in a little cottage, with a garden and a place where the garage is going to be, and a salary of three hundred dollars a month.

There are, of course, always two sides to any such story as this, and I am willing

## "Old Town Canoes"

### The Call of QUIET WATER

A QUIET stream is a wonderful place to lazy-paddle a canoe. Overhanging branches cast deep reflections in the cool, calm water. Patches of sunlight make an ever-changing pattern on the surface.

You just idle along. The "Old Town" glides forward at the slightest pressure of the paddle. The still water murmurs a mild protest as it ripples off the bow. Canoeing is keen enjoyment.

And an "Old Town" is the finest of canoes. It is easy to paddle—exceptionally strong and light and steady.

"Old Towns" are patterned after real Indian models. The lines that make for grace and speed are faithfully reproduced. But the "Old Town" master canoe-builders have improved the construction. Have added strength and beauty unknown to the Indians.

An "Old Town Canoe" will last you for years. And it is the lowest-priced canoe you can buy. \$54 up from dealer or factory.

The new 1923 catalog shows all models in full colors. Write for one to-day. It is free.

**OLD TOWN CANOE CO.**

366 Middle St., Old Town, Maine, U. S. A.

to admit the advantages of the big town for the big-town bird. The point I make is simply this: there are big-town birds and small-town birds; the tragedies happen when the little-town bird tries to live and thrive in the big town, for which he is not designed. As I studied the men who made good in a big way in New York, it seemed to me that they had five distinguishing characteristics:

**FIRST:** Almost invariably they were men of unusual physical endurance. Not physically big men, necessarily, but men who could stand a long-continued strain without regular exercise and with only a fraction of the ordinary quota of sleep. Someone will at once make the objection that more golf is played in and around New York than anywhere else in the country. But I am speaking, remember, of the man who gets to the very top. He may become a golf player *after* he has arrived; but in the lives of almost every one of these men there is a five-year or ten-year period of almost literally day-and-night work.

The army statistics proved that men from the big cities had a higher power of nervous resistance than men from the small towns and farms. I don't mean necessarily that men in New York work harder than we work in our little town, but the strain is greater, and no small-town bird whose wings droop at the end of the day ought to try flying over the hot pavements of the big city.

**Second:** A second requisite for large success in New York is the ability to go it alone without becoming lonesome. My father is a great social being and I take after him. We like to belong to organizations, and to sit down in the evening with a circle of friends. He would fret himself to death in New York, just from the strain of living in an apartment house of forty families, none of whom knew him or wanted to. The man who wins out in New York may be a very human chap, when you get to know him; but if you want to get to know him you will have to make the effort. He won't. He is so constituted that he can exist for long periods without any friendly gossip.

**Third:** Between two men of equally sound judgment there is often a great difference in the way decisions are made. One will gather evidence slowly, turn the facts over in his mind and tell you he will let you know to-morrow; the other will say "Yes" or "No" on the spot, and take his chance of being right fifty-one per cent of the time. Generally speaking, the "think it over" man is better off in the smaller town; the microbe-man goes big in New York.

**Fourth:** I believe that the most successful big-town bird has to be satisfied with acquaintances rather than friends. In our little city a man may have a hundred friends. In the big town you can have perhaps a dozen friends; but to keep up with more is impossible, the pace is too swift and the schedule too full. Instead of friends, one has acquaintances and—whether he wants it or not—the acquaintances change as his material prosperity increases. In spite of ourselves, we are eternally with the people who make and spend about as much as we do, and can afford to do the same things. We may say to ourselves: "We will never let money

FREE Book: "Better Porches" shows how to make porches usable and attractive. Write for it.

The Aerolux Company  
5115 Oakland Ave., Waukegan, Wis.

change us; we will always see just as much of the Joneses as we ever did." In a little town that is possible; in a big town it is not.

When you grow richer you move to a different section of the big town or out into a suburb, leaving the Joneses behind. And after a few spasmodic efforts to "have them over," and to "look them up," you drop the struggle. In a small town the friendships cut through the money lines. Those of us who think of life in terms of friendships, rather than of money or position, are happier, I think, in being small-town birds.

Fifth: Finally, the big town demands a certain strain of daring, even recklessness, in the men whom it rewards most highly—a characteristic which the smaller town looks at askance. Read through the histories of the men who have been most successful in New York; how few had anything at all at forty. Why? Because they are natural-born chance-takers. Whatever they could get together in their early years they bet on themselves, either by backing a business enterprise, or in living and entertaining more extravagantly than their means really allowed. Usually they lost enough bets in their early years to keep them pretty well strapped until middle life; but when the tide turned they cashed in big.

THE career of the typical small-town man is quite different. He starts saving money from the very beginning. If his income is twenty-five dollars a week he lives on twenty dollars; if it is one hundred and fifty dollars a week he lives on one hundred dollars, or less. He may never win out in such a spectacular fashion as the big-town man, but he plays a surer game. In the final accounting, he shows up remarkably well.

There is nothing of the gambler in my make-up. I thought during the war that I had got so used to big sums that I would never feel any awe, but that was self-deception. I am a *saver* rather than a *maker*—and that, I am sure, is one of the marks of the small-town bird.

So here we are, at three hundred dollars a month, and a pretty good chance of my being vice president of the bank some day, and perhaps president, if we behave ourselves. We're paying for a home—and incidentally buying a couple of other lots in the same locality and investing a little in other local things that look good.

Every Sunday we have dinner with my father and mother, and my sister brings her youngsters over, and the grandchildren romp all over the grandparents for a couple of hours. Everybody who comes into the bank or passes us on the street calls me "Jim." And the lawn is green, and the garden grows, and there is a place behind the house for the garage.

All of which seems to me to prove that we small-town birds have about all that life can give—except a fortune, perhaps. I am not sure that there isn't a chance for the fortune, *also*. At least, I've noticed this in reading about the death of rich men in the newspapers, and I wonder if you have noticed it, too—the popular estimate of a big-town man's wealth is almost always too large; the estimate of a small-town man's fortune is frequently too small.

## Safe Rudder Steering

HOW do water accidents happen? Someone is standing, another steering. A violent change in direction and splash! Add power to carcraft and the danger increases a thousand fold. That's why the Elto steers with a rudder. No possible chance of dangerous pivot turning.

Ole Evinrude's

# Elto

## 3 H.P. Fast Light Twin

Full 3 H.P. by piston displacement. That's an extra H.P. over other motors of the light weight class—a *real* extra H.P. to give speed to substantial seaworthy boats—to be safe in currents, headwinds, tides, etc. Trust Ole Evinrude, the pioneer outboard designer, to build "as light as right" at an extra cost of power, speed or durability. The Elto's 23 square inches of ground, case hardened crankshaft and connecting rod bearings is double the bearing area of other light weight motors. The life of a motor is in the bearing.

**Instant Starting** No ropes needed. A quarter turn starts the Elto because there is a big hot spark "on tap" independent of cranking speed.

**Tiller Rope Control** From any point of look. No shaky steering handle. Safety tilt when propeller protective hits obstruction. No possible harm to boat or motor. Fastest—as it should be—with an extra horsepower. Ole Evinrude's perfected twin is sold only under the name Elto. Write for catalog.

Dealers and demonstrating agents. Some good territory still open.

**ELTO OUTBOARD MOTOR CO.**  
Dept. 15, Manufacturers Home Bldg.  
Milwaukee, Wis.

"As Light as Right"

50 lbs.

Designed by Ole Evinrude

Again it's  
happened!

**"Only a trifling cut." But—it's an  
open door to infection!**

**N**EGLECT of such injuries is folly. Dirt, grease, chemicals may contaminate, with serious results. Neglect of minor industrial accidents costs men and management millions of dollars every year in wages and profits, disorganized production, delayed deliveries.

Stop this loss!

Stop the pain and discomfort!

When such accidents occur, think "Unguentine—quick!" Cleanse the wound thoroughly. Apply Unguentine. And the door is closed to infection. Unguentine's healing work has begun.

For over thirty years, physicians and hospitals have been using Unguentine in dressing industrial injuries.

Thousands of workmen are never without a handy tube of it. They have found Unguentine a true "friend in need".

To keep a tube on hand is wisdom.

Get it at your druggist's—he knows what Unguentine will do. Price thirty-five cents.

THE NORWICH PHARMACAL COMPANY

LABORATORIES—NORWICH, NEW YORK  
New York Chicago Kansas City

**Norwich**

Unguentine is a standard dressing in hundreds of industrial plants.

Among these:

Pierce-Arrow  
Motor Car Co.  
Endicott-Johnson  
Corporation  
Westinghouse  
Air-Brake Co.  
and all twenty plants  
of the  
American Sheet  
and Tin Plate Co.

The name "Norwich" on a pharmaceutical preparation stands for purity of ingredients and extreme accuracy in control of preparation. Rely on this name in drug store purchases.

## A Mother Who Wouldn't Give Up

(Continued from page 50)

to happen! I can't disappoint them now."

"Nearly everybody's gone in now, Mama." Frances looked up at Mollie's harried face questioningly. "There won't be any seats left, and we'll have to stand up."

Mollie looked around again. Yes; everybody had gone in except a few grown people like herself and scores of wistful-faced children. The time was getting desperately short. Was it possible that *nothing* was going to happen? Could it be that—

A man came to the entrance of the big tent and, mounting a platform, bawled that the performance was now beginning.

"Come on!" The children started forward with a rush, dragging Mollie along. She tried to hold back, to gain a little time, just a moment to think. She felt now that there was no hope. But if she could just manage to spend the two dimes so that the children would not feel that they had missed everything. The merry-go-round! That was it! None of the children had ever been on one. That would help. But, no, her hopes suddenly fell. That would take five nickels and she had only four. Wasn't there something else? She thought frantically. No; there was nothing you could buy for twenty cents that could be divided by five, nothing but candy. She supposed it would have to be candy. But the children had had candy!

**T**HEY were at the entrance to the big tent now and the children were clustered around her, waiting eagerly, hardly able to hold themselves still.

"Hurry, Ma! They've started to laughing inside already." Charlie was jumping up and down.

The ticket-taker held out his hand. Mollie looked down at it in a daze, then around at her children. She started to untie the corner of her handkerchief, then stopped—

"Ma!" There was anxious questioning on five small faces.

"Ma," Jimmie's shrill whisper broke through to her, "what's the matter? Ain't you got the money?"

Mollie looked down at the wistful freckled face of her son and knew that the day of reckoning was at hand. Her faith, her trust, had amounted to naught. She shut her eyes, steeling herself not to let the hurt on her children's faces cut too deep. It would have hurt them less to have told them in the beginning. But, somehow, after she had done her best, she had been so certain—

"Ma, don't!" Jimmie's rough little fingers closed suddenly around hers. "Don't! If you ain't got the money, we don't care! We've seen about all there is to see, anyhow. We can come next year. Don't, Ma!"

Mollie saw his face through a mist and the faces of the other children, who crowded close. "Children," she began tremulously—

"Thank goodness!"

Mollie whirled and faced the big man who was shaking her by the arm and panting his relief.

"Mr. Ren-fro!"

He let go her arm and mopped his perspiring face. "Well, I've had a narrow escape! If I hadn't found you, I'd never have made peace with my wife. She told me last night to see you this morning without fail. In fact," he grinned at Mollie, "she threatened to divorce me if I didn't. Said she owed you some money she'd promised to pay to-day and that you were counting on it to take your children to the circus. I remembered it when I got about forty miles from home, and I've been burning up the road getting back. Made it just in time, didn't I?"

He grinned at Mollie again, but she could not smile back. She could do nothing but just look at him. He began to fumble in his pocket hurriedly. "The madam didn't tell me how much she owed you."

Mollie, with a lump of utter thankfulness choking her, told him the amount. She did not add the raise in price she had hoped for, and that meant so much. That would not be right or fair, she decided instantly. He would pay what she told him without question. He'd take her word. No; no matter how badly she needed it, she'd wait until Mrs. Renfro came back.

MR. RENFRO counted out the money, and started to hand it to her, but changed his mind. "Got your tickets?" he asked.

Mollie shook her head. She was not able to say much just then.

"All right. You wait here. I'll get them for you."

He came back in a moment with the tickets. He gave them to her, then he handed her her change, or, rather, he handed her *all of her money*.

"My treat to the children," he said, looking away from her.

Before Mollie could get her breath to protest he hurried away, but not until he had thrust a dollar into Jimmie's hand.

"Buy the kids some peanuts and balloons and crackerjack, son."

They all went in the big tent then, the children walking on air, Mollie with her head bowed, scarcely seeing where she went.

"I'll never doubt again!" she whispered tremulously. "Oh, I'll never doubt again!"

"HENRY FORD Talks About His Mother" is the title of an extraordinarily human interview written by Edgar A. Guest that will appear next month. In this intimate talk Ford looks back to the days of his boyhood spent on a farm, and tells of the abiding influence of the homely truths his mother taught him.

"NEW Stories of Abraham Lincoln," revealing the timid, tender, and intensely human side of the immortal President, are told next month by Elizabeth Irons Folsom. From an inner group of friends and relatives come these heretofore unpublished lights upon his personality.

## The Correct Type of Tooth Brush

*As evolved by modern experts and adopted by modern authorities*

A world-wide crusade is being conducted for better tooth protection. This new-type brush is a vital factor in it.

It is made to the specifications agreed on by leading dental authorities. Dentists in general, the world over, now advocate this type.

It does more than remove food debris. It attacks the coats, the cause of most tooth troubles. It is adapted to the rolling method, now generally advised. One should always brush from the gums toward the tooth points. Careful people everywhere, under dental advice, are adopting

this type of brush. It is known as the Decoater.

### Pocket Style

The Decoater also comes in this pocket style. Thus travelers, motorists and others may always have a well-kept tooth brush with them.

Wherever you are, teeth should be brushed immediately after meals. With people who eat away from home, this is the only way.

With the pocket style the handle-case is permanent. You simply buy refills as the brushes wear out. It fits the vest pocket or a woman's hand-bag.

## The Luck of Being Lame

(Continued from page 51)

in safety. Many a time a rough-looking truckman will halt his truck and wave for me to cross the street ahead of him.

Only the other night, as I was leaving the theatre in a pouring rain to join the mad scramble for taxicabs, I heard a pleasant voice addressing me.

"Can't I give you a lift?"

There, leaning from the window of her limousine at the risk of having the rain spoil her evening gown, was a beautiful woman, a star of the theatrical world, whom I often had seen on the stage but never had met, offering the use of her car to a lame stranger. Even though I refused the ride, I see no reason why anonymity should hide the person who had such a generous impulse. It was Marguerite Sylva.

Still another important lesson that lameness brought home to me was this:

*A handicap demonstrates the body's adaptability.*

Scientists say the faculty of the human being to adapt himself to circumstances is mainly responsible for his having so far outstripped the rest of the animal kingdom. Man has always shown remarkable adaptability to the conditions in which he had to exist. If he lived where game was plentiful, he became an eater of meat. Where game was lacking, he lived on vegetables and roots. If it was his lot to be on the seashore or by a lakeside, he ate fish. Unclad, he survived in the tropics, but placed in the arctic regions he covered himself with furs, and outlived the bitter cold of the long winters.

THE records of what the physically handicapped accomplish are really marvelous. A thirteen-year-old youngster on Staten Island, with one leg off at the hip, insisted on entering the school athletic contests. Dropping his crutches, he gave a hop or two to get his balance, and then with his one leg surprised everybody by making a high jump of four feet and six inches.

Every summer the newspapers record feats accomplished by swimmers with one leg or one arm. There are many blind persons in all our cities who go about the streets unattended. The other day I read of a man out in Michigan who, since he was three years old, has had to go about in a wheeled chair. He has become an expert marksman. One of his pastimes is to go deer-hunting. He has his wheeled chair carried into the forest, and, sheltered by a blind, waits until he gets a shot at a deer.

One blind man in New York City goes regularly to the baseball games. He takes someone with him to describe the plays, and is delighted to realize that his recreation now gives pleasure to two instead of to one, as it did before he lost his sight.

The strangest thing about this particular blind man is that when he had his sight he was unsuccessful in business. Since he has become blind he has amassed a comfortable fortune. He says he owes his financial success to his blindness. The fear of becoming a burden to others acted as a spur, and after losing his sight he

## The Man in the Wash Room

ALL the directors were assembled. Only the chair at the head of the table was empty. "Where is he?" one man asked. "Washing his hands," said another.

But the chairman of the board was in the wash room, running through the Daily Dozen exercises. "It is the greatest way in the world," he explained, "to clear your brain and calm your nerves before an important meeting." A trial will cost you ten cents in stamps. Send them today for

found that there were fewer things in life to distract him from giving proper attention to his business.

There is hardly an avenue to success to which a physical disability, properly dealt with, is a handicap. If I had never known lameness, I never would have written the book "Limpy," which brought me more reputation as a writer, and incidentally more money, than any other of the many books I have written.

**YOU** will be surprised to discover, if you study the records of the outstanding figures in the world's history, how many of them have had what is popularly called a handicap. Milton was blind, Shakespeare was born poor, Byron was lame, Beethoven was deaf, Roosevelt, in youth, was a physical weakling. What of it? Each of them succeeded in doing what he wished to in life. That is one of the most wonderful discoveries which lameness or any other physical defect brings home: *A handicap is an incentive to effort.*

The lack of things in our lives is what spurs us on. Life is a sort of a race, a game, and one of the greatest joys it offers is keeping up with the other fellow, or getting ahead of him. In most of us there is a contrary streak. When anything is forbidden or denied to us, that is the thing we wish most to do. The man who is handicapped, trying something that seems impossible for him, gets an extra delight in its accomplishment. And that perhaps is why I can truthfully add another to the lists of lessons that have come to me from lameness: *A handicap adds to happiness.*

Whenever I hear anyone attributing his failure to attain success or happiness to the fact that he was deaf, blind, or lame, or was born poor, and had no chance to get an education, I get out of patience. I am tempted to produce a letter which I keep among my treasures.

This letter is from a young woman whose home is on a farm in the West, fourteen miles from a railway, one of those little homesteads whose neighbors are so distant that you never see them. It is a home where money is always scarce, where luxuries are unknown and comforts are few.

Most girls would regard the necessity which requires this young woman to live in such surroundings as bad enough in itself. When they learn that she is motherless and that her work-worn stepmother has three younger children of her own, they will doubtless picture her as leading an unhappy life. But listen!

On top of these things, this girl is stone deaf and totally blind. Several years ago, through illness, she had to have one leg amputated at the hip.

This girl, at the State Institution for the Deaf, has learned to read, to master the books and magazines printed in raised points, and in addition to run a typewriter. The typewritten letters I receive from her have few errors. They show a wide range of reading—history, geography, fiction—and in the particular letter I have mentioned there is a note of joy. Two wonderful things have happened to her: Someone has given her a pair of crutches for Christmas. Think of it! Glad to get crutches on Christmas! Now, she gleefully writes, she no longer has to sit all day long in one place but can move freely about the house. More than that,

# Spur Tie

Pat. June 13, 1922 Reg. U.S. Pat. Off.

**SPUR TIE**  
Four-in-Hand  
All tied for you—no  
wrinkles—slip on and off  
with ease—all for \$1.00.  
Sold by dealers who handle  
the Spur Tie Bow.

**A BOW—WHY NOT?**  
**T**HE bow's the thing this season. And the Spur Bow will be your choice. No fussing or fretting. No guesswork—no failure. It always looks just right. Has the touch of style that "sets" a fellow up.

**ALL TIED FOR YOU**  
By hand, better than you'd tie yourself. The cost? No more than ordinary bows—or less. 50¢ each—two for \$1.00. You can't find more neckwear value for your money—anywhere!  
Ask for it by name at your dealer's. And add—"the tie that saves your disposition." That's the "counter-swing" that brings results.  
Accept no substitution for the Spur Bow. Others imitate but do not equal. The Spur Bow has exclusive features. Insist on the genuine. The name "Spur" is plainly stamped on every tie.

*If your dealer will not supply you send \$1.00 for two; 50¢ for one, specifying size (large or small), color, preference and whether elastic band or slip-on grip.*

## Test Your English

### See What Mistakes You Make

Amazing as it may seem, actual tests prove that the average person is only 10 per cent. efficient in the practical use of English. Most people realize that they may be making mistakes, but do not know what they are or how often they are made. Sherwin Cody, America's foremost teacher of practical English, has at last solved the problem of how you can test your knowledge of English and see just where you stand—you can instantly discover your mistakes and correct them from Mr. Sherwin Cody.

**Sherwin Cody's Great Invention** for his new method, Mr. Cody has made it amazingly easy for you to learn English rapidly. The new method is the old method which made English so hard to learn. No time is wasted. All your efforts are concentrated on acquiring a perfect command of English—discovering your mistakes and correcting them from the source. Only 15 minutes a day, in your spare time, will put you on your English feet wonderfully, sure way.

**FREE!** Get this test and book—Free

Mr. Cody has prepared a short, interesting, 15-minute test which tells you, privately, just where you stand in your knowledge of good English. If you are better than the average, it will give you added confidence in your ability. If you are deficient you surely want to know it. Write today for this test—it is free. We will also send you our new free book, "How to Speak and Write Masterly English," which explains in greater detail how Mr. Cody's great invention gives you a masterly command of English in only 15 minutes a day. Write TODAY.

one of her former teachers has written that in a few months, when the school term is ended, she is coming to take the blind-deaf-lame girl to her home for a visit.

Only those who have suffered can enjoy. It is true, of course, that anyone who finds himself all at once physically handicapped experiences mental suffering more keen than his physical suffering has been. Invariably, out of it comes peace of mind and contentment. Presently he begins to discover that his lot is not going to be nearly as bad as he had pictured it.

Blind people are noted for their cheerfulness and optimism. It is remarkable how often a lame newsboy is nicknamed "Happy" by his mates. I think it is because the whole world shows its kindest side to the handicapped that they soon find themselves becoming perpetually cheerful.

Even the worst sort of handicaps seem to bring compensations in optimism. There was Charles Noel Douglas, bedridden for years, who carried on a vast correspondence, receiving fourteen thousand letters a year, spreading with his dictated letters the spirit of optimism; "smiling Joe," a little charity patient, spending his days strapped to a board, but his cheery face brought in many dollars to aid other little sufferers.

No matter what happens to you, you can always find pleasure in life if you look for it. A handicap never really interferes with anything you want to do, for it quickly teaches you to adapt your wants to the things you can do.

**BUT** I can tell you of one drawback in being lame. It tends to make you selfish—or at least spoiled. Everybody is always so ready to do things for a lame man—to run his errands, to get him a glass of water, to bring him a book—that he finds it hard to resist letting other people do for him what he is perfectly able to do for himself. If he drops a package someone always springs to pick it up. Generally, he accepts the kindness, even though he knows that he is not getting enough exercise and that the bending would be just the thing for his abdominal muscles. If you're fortunate enough to be lame, you'll find everybody nice to you.

"But," says some doubting Thomas, "down in your heart you are not really glad that you're lame. You don't honestly believe, do you, that a handicap is an advantage?"

I can truthfully answer that: It is not what happens to you that matters but what you think about what happens. So long as a man isn't lame in the head, and can think right, it doesn't really matter much what happens to his body. A handicap, I have learned, is a mold of character. It reveals pleasures and joys that the unhandicapped never find.

Before commencing this article, I looked in the dictionary for the word "handicap." This is what I found:

*Handicap: an extra burden placed upon a superior contender to make the chances more equal.*

A superior contender! That ought to be enough to satisfy anyone, more than enough to make up for the loss of an eye or a leg. It is the tribute of the ages to the handicapped—to those superior persons who had to have an extra burden laid on them to keep them from getting too far ahead.

## Experiences of an Ambulance Surgeon

(Continued from page 47)

free. A policeman and a bystander held him while the first stitch was finished, but I didn't like the idea of completing the work under such conditions. So I had them let the boy sit up.

Then I turned the youngster's foot around so that he could see it. I showed him the cut, the stitch I had taken, and explained how hard he would make it if he struggled while I was putting in four more stitches, which were necessary to bring the edges of the wound together so that they would unite. "Now you watch," I said, "and you'll see how it's done!" And he did! He sat there as interested and as quiet as though the work were being done on someone else, never whimpering a bit, nor moving, though the tears stood in his eyes all the time.

A great many people are like the Irish lad. When you have to hurt them they become badly frightened; but if you take time to explain just what you are doing and the reason for it, they become able to control themselves very well.

I HAVE found that the patients an ambulance surgeon deals with usually belong to one of four classes: First, there is the man who becomes shy on finding himself in the surgeon's hands and the center of a curious crowd. On account of his shyness, he begins to belittle everything about the accident and says that his injuries don't amount to much. Very probably he tells you that what you're doing for him is of no use, since his cuts will get well just as quickly if you don't sew them up. This man doesn't want anyone to think he takes himself too seriously.

There is another type of man who does take himself very seriously, and he is inclined to exaggerate the circumstances of his accident and the extent of his injuries. He seems to think that unless he impresses on the surgeon the importance of the case the surgeon may fail to give it the attention it deserves.

The third class are the average, sensible people, who give the doctor the best information they can, neither underestimating nor exaggerating when they answer his questions. And there is still another class—those who need care the worst way and yet say they would rather die than go to a hospital. People of this kind are fewer than they used to be, but there still are a good many.

Some time ago, a tailor, a man of moderate means, was taken with a severe pain in the region of his stomach. It became so acute that his wife wanted to call an ambulance, but he refused to let her.

Instead of going to the hospital, the tailor took some home remedies that his wife thought might bring relief. At the end of eight hours he was unconscious and his stomach was as hard as a board. Then his wife did send for an ambulance—but it was too late. The man's trouble proved to be a gastric ulcer, which had burst through the walls of the stomach, letting the stomach's contents into the abdominal cavity. Had the man gone to

## The Moral of Success!

"WHEN a man does small jobs well, I know that he can be trusted with big ones," said a famous financier.

In Sealpax we have done a big job in the way we have bettered the little things in underwear making.

Double-sewn seams, tailored button holes, roomily cut garment—without skimpiness anywhere—

patented double crotch, webbed shoulder, triple-webbed waist—little things, perhaps, but very significant of Sealpax quality. Which means underwear economy and underwear satisfaction!

Beware! Short cuts in the making of underwear mean short life in the wearing.

Get quality Sealpax in the sanitary envelope and take a vacation from the summer heat.

the hospital and submitted to an operation immediately after the pain became acute, his life undoubtedly would have been saved.

Many people, as I have said, do call out an ambulance on a very slight pretext, but very often this is an error on the right side. The point of view of the ambulance service is that we would rather respond to a thousand trivial cases than fail to attend one serious case.

**N**O HARD and fast rule can be laid down as to when an ambulance should be summoned, but it would be well to bear these suggestions in mind: In case of an accident in which the patient is threatened with a great loss of blood, the call for an ambulance should be sent in with the least possible delay. Likewise, in cases of serious illness, an ambulance should be summoned if a regular physician is not to be obtained. In all our large cities, and in many smaller places, ambulances are always at the service of persons, whether sick or hurt, who are too poor to defray the expense of having their own doctors.

In New York all calls for ambulances are sent in through the police headquarters in the various boroughs, but the same arrangement does not exist everywhere. It would be well for everyone to inquire the quickest way of sending in an ambulance call in his home town, in case such information were needed in an emergency.

The ambulance service in New York is generally recognized as being the finest in the world. It has several times been studied as a model for improving the service in some of the largest European cities.

The city as a whole is divided into forty districts. In each district there is a hospital with two or more ambulances on duty day and night, and these districts are so arranged that an ambulance can reach any point in response to an emergency call within five minutes in good weather and during a non-rush hour, or within seven minutes in rainy weather or when traffic is heavy. The only exception to this is in a few outlying districts, where the calls are not numerous.

Altogether in New York we have 107 ambulances in continuous service. They are manned by 350 surgeons, each a graduate in medicine with at least four months' hospital work to his credit before he is allowed to take his first ambulance call. In a year's time these ambulances respond to more than 111,000 calls.

At Bellevue alone we have four ambulances for emergency cases of sickness or accident, and in case of big fires or explosions we are able to put nine into service. Last year our ambulances went out on 11,000 calls, a greater number probably than were answered by any other one hospital in the world.

You will get some idea of the importance of the ambulance service if I give you a few figures. These figures show the number of patients that were treated or were taken to hospitals by ambulance surgeons last year for various causes of the most common occurrence:

### Injuries and Accidents

Broken legs and arms.....	5,900
Fractured skulls.....	1,639
Burns and scalds sustained in the home, factories, or electrical plants.....	1,211
Sprains.....	1,270

Gas poisoning .....	1,175
Dislocated joints .....	949
Rupture .....	551
Cerebral concussion .....	766
Bullet wounds .....	621
Abdominal injuries .....	439

**Diseases**

Diseases of the heart, chest, kidneys, and intestines .....	8,734
Pneumonia .....	3,660
Tuberculosis .....	1,220
Alcoholism .....	4,108
Infection .....	2,224
Hysteria .....	1,634
Insanity .....	4,705
Epilepsy .....	2,182
Hemorrhage .....	1,743
Convulsions .....	593

Accidents of such serious nature that a delay in the arrival of the ambulance may mean life or death to the patient are not unusual.

Recently, a woman had both legs cut off just below the knee by a trolley car. In the excitement that followed this accident there was a considerable delay in sending in the call for an ambulance, and when the call did come the quickest possible response was not sufficient to save her life. The surgeon in charge of the case promptly applied tourniquets and brought her to the hospital from a distance of more than two miles in three minutes, but she was in such a weakened condition from loss of blood that at no time was there any hope of her recovery.

**S**UCH a case as this is exceptional, however. Far more often the surgeon arrives to find that his patient is much less seriously hurt than the first report indicated. Not long ago, a call came in for an ambulance to attend a woman who had been struck by lightning; but upon arriving at her home I found that she was suffering from hysteria due to the belief that she had been hit.

She had been standing near the kitchen window when a flash of lightning came, and this was followed by a terrific crash of thunder. She gave a piercing cry, dropped the bowl in her hand, and fell to the floor. Both she and her husband thought she had suffered a physical injury.

I found the woman sobbing convulsively and unable to control the violent shaking of her hands. But all she needed was encouragement to believe that she was unhurt. I told her that she was not injured, and insisted firmly but gently that she could hold her hands still if she would try. She was doubtful about it at first, but finally did try and succeeded.

Far more ambulance calls come in at the noon hour and at six o'clock in the evening than at any other time of day. This is due to the fact that traffic is heaviest at these times, and many people, who are in a hurry and consequently careless of how they cross the streets, are struck down.

At all seasons of the year the cases that most commonly come to the ambulance surgeon's attention are "lacerations"—cuts on the head, limbs, or body in length anywhere from three quarters of an inch to five or six inches. Last year, more than fifteen thousand patients were treated for this cause alone. The great majority of these injuries were sustained by slipping in the street, falling down stairs, or in collisions between persons and moving vehicles.

## Will You Give Me a Chance to Pay You \$100 a Week?

I want to make you a special new offer whereby you can earn from \$100 to \$1,000 a month, cash. And I am going to tell you how to get started immediately without waiting or delay.

You can be your own boss. You can work just as many hours a day as you please. You can start when you want to and quit when you want to.

You don't need experience and you get your money in cash every day when you earn it.

### These Are Facts

Does that sound too good to be true? If it does, then let me tell you what J. R. Head did in a small town in Kansas. Head lives in a town of 631 people. He was sick, broke, out of a job. He accepted my offer. I gave him the same chance I am now offering you. At this new work he has made as high as \$69.50 for one day's work.

If that isn't enough, then let me tell you about E. A. Sweet of Michigan. He was an electrical engineer and didn't know anything about selling. In his first month's spare time he earned \$243. Inside of six months he was making between \$800 and \$1,200 a month.

W. J. McCrary is another man I want to tell you about. His regular job paid him \$2.00 a day, but this wonderful new work has enabled him to make \$9,000 a year. Yes, and right this very minute you are being offered the same proposition that has made these men so successful. Do you want it? Do you want to earn \$40.00 a day?

### A Clean, High-Grade Dignified Business

Have you ever heard of Comer All-Weather Coats? They are advertised in all the leading magazines. Think of a single coat that can be worn all year round. A good-looking, stylish coat that's good for summer or winter—that keeps out wind, rain or snow, a coat that everybody should have, made of fine materials for men, women and children, and sells for less than the price of an ordinary coat. Now, Comer Coats are not sold in stores. All our orders come through our own representatives. Within the next few months we will pay our representatives more than three hundred thousand dollars for sending us orders.

And now I am offering you the chance to become our representative in your territory and get your share of that half million dollars. All you do is to take orders. We do the rest. We deliver. We collect and you get your money the same day you take the order.

You can see how simple it is. We furnish you with a complete outfit and tell you how to get the business in your territory. We help you to get started. If you only send us three average orders a day, which you can get in an

hour or so in the evening, you will make \$100 a week.

### Maybe You Are Worth \$1,000 a Month

Well, here is your chance to find out, for this is the same proposition that enabled George Garon to make a clear profit of \$40.00 in his first day's work—the same proposition that gave R. W. Krieger \$20.00 net profit in a half hour. It is the same opportunity that gave A. B. Spencer \$625 cash for one month's spare time.

I need 500 men and women, and I need them right away. If you mail the coupon at the bottom of this ad I will show you the easiest, quickest, simplest plan for making money that you ever heard of. I will send you a complete outfit. I will send you a beautiful style book and samples of cloth. I will tell you where to go, what to say, and how to succeed. Inside of thirty days you can have hundreds of dollars in cash. All you need do today is write your name down below, cut out the coupon and mail it to me at once. You take no risk, you invest no money, and this may be the one outstanding opportunity of your life to earn more money than you ever thought possible.

### Find Out Now!

Remember, it doesn't cost you a penny. You don't agree to anything, and you will have a chance without waiting—without delay and without investment—to go right out and make big money. Do it. Don't wait. Mail the coupon now.

DIXON MOTOR CARS CO.  
19-20 Wacker Ave. Dept. 38 CHICAGO

Recently a restaurant proprietor who  
was closing up his place a little after mid-  
night was asked by two men to open up,  
so they could get something to eat. When  
he refused they ordered him to do so, and  
when he still refused they beat him over  
the head until he became unconscious.  
There were three bad cuts in the restau-  
rant man's scalp, and the surgeon who at-  
tended him had to put in fifteen stitches.

Every year in the fall we have some  
cases of persons who have had their scalps  
cut by the "straw hat smashers." The  
"straw hat smashers" are usually rowdies  
who take upon themselves the enforce-  
ment of the fashion edict which says that  
straw hats shall not be worn after Septem-  
ber fifteenth. In some instances men have  
not only suffered scalp wounds at the  
hands of these jesters but injuries—from  
sticks or canes used in smashing their hats  
—which cost them the sight of one or both  
eyes.

One thing the ambulance surgeon al-  
ways has to contend with—the crowd that  
gathers at the scene of every accident.  
Last summer I was called out with the  
ambulance at seven-thirty in the morning,  
and arrived at a busy intersection in the  
central part of the city to find that a win-  
dow washer had fallen from the seventh  
floor of a bank building and had struck on  
his head. The sight was a very terrible one,  
but this only seemed to draw a larger  
crowd than usual. While I was doing  
what I could for the dying man, there  
was a noisy disturbance on the outskirts  
of the crowd.

PRESENTLY I discovered that a young  
woman, having torn her clothes and  
knocked her hat off in fighting her way to  
the inner circle of the crowd, was standing  
where she had a full view of the patient.  
Then suddenly she gave vent to a piercing  
scream, stood for a moment in a daze—  
and fainted.

Thus I had two patients to attend to  
instead of one. When the young woman  
was restored to consciousness I told her  
that I hoped her experience would teach  
her a lesson, and make her remember the  
next time that her presence on the scene  
of an accident when an ambulance surgeon  
was already in charge was far more likely  
to be a hindrance than a help.

At Bellevue, besides our four ambu-  
lances devoted to sick and accident cases,  
we have two ambulances that are used  
exclusively for transporting patients suf-  
fering from mental derangements. A  
doctor seldom accompanies these ambu-  
lances, a male nurse or both a male and  
female nurse being in charge. The other  
day a man who has been in charge of one  
of these ambulances for a good many  
years, in telling me of his work, said:

"In the course of a year I bring to  
Bellevue many hundreds of patients who  
are suffering from mental ill. They are  
brought here so that their cases may be  
studied and the best treatment for them  
determined upon. Sometimes they are  
poor, under-nourished people who have  
lived lives of prolonged hardship; some-  
times they are men of substance and posi-  
tion broken down through nervousness.

"I am very seldom that I have any real  
trouble in getting these patients to come  
with me to the hospital. They are often  
very apprehensive and want to do just the  
opposite of what you want them to; but

## BECOME AN EXPERT STENOGRAPHER AND SPEED TYPIST

A profession that offers you and women rich rewards, fascinating  
work, big pay, and opens the way for promotion to high executive  
positions paying \$10 to \$20 a week and up. Many of America's big-  
gest business men and women get their start because they mastered  
stenography. Demand for expert stenographers and typists always  
exceeds the supply at salaries of from \$20 to \$50 a week. The Tulloss  
New Way makes you an expert, one who can start in at a large salary.  
Complete course in shorthand and typewriting, new principles, teaches  
exceptional speed and accuracy. You can write shorthand the new  
way 120 to 150 words a minute. You can typewrite 80 to 100 words a  
minute and with this speed gain accuracy and ease of operation—no  
fatigue as with the old way. Remarkable methods—remarkable results.  
You learn faster the Tulloss New Way. No previous stenographic  
training necessary. Train at home during your spare time. Only  
about half usual cost—you will become a far more efficient stenogra-  
pher—worth more money than the average right from the start. If al-  
ready a stenographer you nevertheless need New Way training in speed  
typewriting. For no matter how good you are in shorthand, you can  
never expect the high salaries until you get speed, real speed  
and accuracy on a typewriter. Quickly acquired in ten easy lessons.  
Will send you free our amazing book, "How to Be a Big Man's Right  
Hand." It tells how business men choose their private secretaries,  
how they advance them to executive positions. Send postal or letter  
and indicate whether you are interested in the complete stenography  
course or simply speed typewriting. No obligation—write today.

THE TULLOSS SCHOOL 630 College Hill Springfield, Ohio

## WE TEACH COMMERCIAL ART

Meyer Both Company, the largest  
Commercial Art Organization in the  
World, offers you an unusual opportunity for  
practical training. If you like to draw develop your  
talent. Study this practical course—taught by this  
nationally known organization with twenty-two years'  
success—who each year produces and sells to adver-  
tisers over 15,000 commercial drawings.

Who else could give you so wide an experience. Meyer  
Both instruction is the difference between successful  
fact and experimental theory. Commercial Art is a  
highly paid, intensely interesting profession, equally  
open to men and women. Home study instruction.

Get Facts Before You Enroll in Any School

Ask the Advertising Manager of the leading  
newspapers in your city, anywhere in  
the United States, Canada, England  
or Australia about the Meyer Both  
Company—let them tell you about us.  
Write for our illustrated book telling  
about the success of our students—for out-  
half the cost of mailing—four cents in stamps.

Send 10 cents for 288-page book on Stammering and Stuttering. "Its Cause and Cure." It tells how I cured myself after stammering 20 years. G. H. Bogus, 4044 Bogus Bldg., 1147 N. W. St., Indianapolis.

## Deaf Can Hear Says Science

### New Invention Aids Thousands

Here's good news for all who suffer from deafness. The Dictograph Products Corporation announces the perfection of a remarkable device which has enabled thousands of deaf persons to hear as well as ever. The makers of this wonderful device say it is too much to expect you to believe this so they are going to give you a chance to try it at home. They offer to send it by prepaid parcel post on a ten-day free trial. They do not send it C. O. D.—they require no deposit—there is no obligation. They send it entirely at their own expense and risk. They are making this extraordinary offer well knowing that the magic of this little instrument will so amaze and delight the user that the chances of its being returned are very slight. Thousands have already accepted this offer and report most gratifying results. There's no longer any need that you should endure the mental and physical strain which comes from a constant effort to hear. Now you can mingle with your friends without that feeling of sensitiveness from which all deaf persons suffer. Now you can take your place in the social and business world to which your talents entitle you and from which your affliction has, in a measure, excluded you. Just send your name and address to The Dictograph Products Corporation, 1333 Candler Building, New York, for descriptive literature and request blank.—Adv.

I have found that kindness and persuasion of the diplomatic kind count a great deal in dealing with them, as with all other kinds of people.

"Some time ago I was called to the home of a well-to-do man in upper New York. I was told that through excessive work and various anxieties he had suffered a mental breakdown. It was feared that I would have trouble in handling him, and there were three policemen on hand to help me.

"THE patient was suffering from delusions; he had become convinced that he was soon to be elected mayor of New York. When I heard this I decided upon the best course for me to follow and asked the policemen to stay out of sight, so as not to excite the man. I was warned to be careful, as the patient was then at his dinner table and it was thought he might resist with the carving knife.

"The first thing I did on entering the dining-room was to greet the patient with a cordial 'Good evening,' and then I said, as though I had known him all his life, 'I hear you're going to be elected mayor of the city.'

"That's so," he answered. 'I'm going down-town to see about it right after dinner. The only trouble is that some of my own people here have got the idea that I'm crazy.'

"Is that so?" I said. "Then I can tell you what you ought to do. There's an ambulance out here from Bellevue now. You go along with me down there. They'll look you over, and if you're all right, they'll give you a certificate to show it. Then you won't have any more trouble."

"That's a good idea!" he exclaimed and, getting up from the table, he put on his hat and came with me to the hospital. He made no complaint nor protest until he found that he was not to be released from the hospital at once. But it was best for him that he stayed here. He was kept under observation for a short time, and then was sent by his relatives to a sanitarium, where he was restored to himself within a year.

"I have brought in patients who were suffering from delusions that they were J. P. Morgan, John D. Rockefeller, or the President of the United States; and the other day a man solemnly told me that he was Jesus of Nazareth.

"I believe everything my patients tell me, of course, and either for this kindness or other things I do for them they are often anxious to reward me liberally. They don't seem to realize the difference between fifty dollars and a million. So when they write out checks payable to me the sums are usually large. Sometimes these checks are written on scraps of paper borrowed from me, and sometimes upon the margin of a newspaper, and once a man wrote a check for a million dollars on his cuff. When we arrived at the hospital he gave me the cuff. I have figured out that if all the checks I have received from patients who have ridden in the ambulance with me were valid, I would be the richest man in the world.

"The other day I brought to the hospital an Englishman who had once been a clerk in a book store. On the way in he said to me, 'Have you heard the news? King George is coming over to rule the United States!'

## "I'm at the Top of the Pole

That's as high as I can climb in my present job."

SO wrote an ambitious lineman to the United Y. M. C. A. Schools. He didn't want to climb poles all of his life, so he enrolled for a practical course of home study to help him to a higher position in his chosen field of work.

He is making progress. He feels that ahead of him are the larger responsibility, the leadership, the higher pay and the better privileges, comforts and associations that are sure to come to the man who puts more into his head.

Have you gone as high as you can with what you now know? Do you need more knowledge to climb higher? Face these big questions.

During the last three years our friendly counsel has been given to more than 35,000 men who have enrolled for the United Y. M. C. A. Schools' Correspondence Courses—a new type of instruction from competent instructors that emphasizes service on all your problems.

# Regenerative Receiver ~ \$35.

**W**HEN you sit beside that simple little box containing Radio-Craft's D-4 \$35 Receiver, you are audience for whatever you want to hear of the operas, the concerts, the stories, the songs, that come from the big broadcasting stations within a circle a thousand miles across. D-4 reaches out five hundred miles in any direction and brings into your home whatever program you want to hear—and brings it in with all its original beauty and clearness. Such is the marvelous achievement of the regenerative circuit when it is harnessed to compact efficiency by the time-proven De Forest parts of which this fine little set is made.

## Master of a Thousand Miles of Enjoyment

You are that with D-4 alone. When you add Radio-Craft's D-5 2-Step Amplifier, you practically double this reception range on head phones, or actuate a loud speaker at the original range. All De Forest dealers also carry Radio-Craft sets.

## FREE RADIO CATALOGS

We will mail you the Radio-Craft catalog and price list if you are interested in Regenerative Sets, or the De Forest 32-page catalog and prices if you want full information on De Forest parts or sets, including the new thousand-mile range Reflex with 2-foot Indoor Loop. Price \$125. Address letter or postcard to

**LaSalle Extension University Dept. 533-L Chicago**

"Is that so?" I said. "When does he arrive?"

"The date of his arrival is a little uncertain; but it's all arranged. I have presented the king with a ship of gold. It is all pure gold—masts, keel, decks, sails, and everything. And when the king arrives on this ship he will be received with open arms and proclaimed the ruler of the land. Soon after that, I expect to be appointed his Prime Minister. Then I'm going to make you a member of my Cabinet, or you can go as Ambassador to London if you want to."

"Even then I didn't let this well-disposed man see me smile, nor did I tell him that if I were able to fill all the high positions I had been promised in the last fifteen years, I would be more powerful than any man that ever lived, not excepting Caesar or Napoleon."

**I**N MY experience as an ambulance surgeon I have seen that occasions are likely to arise in which a knowledge of a few first-aid principles is very important for all of us. In conclusion, I am going to give you a few suggestions on this subject:

When a person has had his arm or leg badly cut or torn off, a tourniquet should be applied without delay. The tourniquet is a bandage made of gauze or any cloth that can be obtained in an emergency. It should be tied above the wound and then twisted tight to prevent the loss of blood. The twisting can be done by means of a stick or any rigid instrument thrust through the cloth bandage so as to give a leverage.

In case of much bleeding from a cut on the head, the edges of the wound should be held together by pressure upon a cloth. In either one of these cases the cloth used should be as clean as possible, sterilized if possible, to prevent the danger of infection.

It is very seldom that ambulances arrive on the scene in drowning cases in time to resuscitate the victim. If a person who has been long under water is to be saved, it is necessary that artificial respiration should be begun as soon as possible. The method of inducing artificial respiration should be memorized, or, better yet, practiced, by anyone who lives near, or spends his vacation time near, water.

The first thing to do for the rescued person is to drain the water from his lungs. This can be accomplished by holding him so that his head is toward the ground, or by rolling him, face downward, back and forth on a barrel. Next, lay him on the ground flat on his back. Take his wrists in either hand. Then pull his arms up

straight above his head. This movement will inflate the lungs. Then lower the arms, bending them at the elbow and pressing them against the chest so as to deflate the lungs. These movements should be continued until normal breathing can be stimulated, if possible.

Artificial respiration is also the first-aid treatment in cases of gas poisoning and for patients overcome by smoke. In emergencies of this kind the patient should be taken to the open air if possible, and put through the same movements as above.

Every year ambulance surgeons in New York treat between three and four hundred cases of people, mostly children, who have been bitten by dogs. Usually these dog bites are not serious; but any bite needs prompt and proper medical attention because of the possibility that rabies may develop. It is always best to have a dog bite treated by a physician. If this is not possible at once, the wound should be washed with iodine, or, better yet, it should be cauterized with carbolic acid. After the application of the carbolic be sure, however, that the surplus acid is washed from the wound with alcohol, to prevent the acid from burning too deep.

Iodine, which is so commonly used nowadays as a disinfectant, seems to be kept in such a convenient place in many of our homes that people are likely to make the mistake of taking it instead of some other medicine. Cases of iodine poisoning are frequent. The best plan, of course, is to use proper precautions against taking this substance internally. When an error of this kind has been made, the antidote is starch and water in liberal quantities.

**L**ET me give you a word of warning about another kind of poisoning that is frequent to-day. In the first six months after prohibition there was a marked decrease in the number of cases of alcohol poisoning. Then they began to increase, and they are increasing right along. During the first six months of 1922, we had 1,223 more cases of alcohol poisoning in New York than during the last six months of 1918. The total for the first six months of 1922 was 3,128.

The reason for this increase is not that more liquor is being drunk, I believe, but that a greater proportion of the liquor used is of very poor quality when manufactured, or else it has been poisonously adulterated. The best way I know of for avoiding alcohol poisoning is to fall in behind the eighteenth amendment with a good grace.

## They Have Plenty of Rain in Corpus Christi

**I**N THE April number of this magazine the following statement appeared in an article entitled "The Experiences of a Buyer":

You may be surprised to know that there is one town in the United States where umbrellas are never sold. This isn't because the people prefer to get wet to carrying umbrellas, but because it never, or almost never, rains. The town is Corpus Christi, Texas.

A few days after this article appeared we received a communication signed by more than thirty prominent residents of Corpus Christi, calling our attention to the fact that their city, situated in the

midst of one of the most fertile farming regions in the entire United States, has an average annual rainfall of between twenty-five and thirty inches. Other documents and letters pointing out the same misstatement were attached.

Now, an interesting side light on this error, which we are glad to set right, is that very few readers in the entire United States seem to have noticed it. At least, only one or two wrote to us about it—and all editors know how quick readers are to call attention to discrepancies of any kind. This all goes to show that ours is an immense country, and that few of us know as much as we should about it.

*Painted with Cabot's Creosote Stains  
Dorothy J. Halem, Alhambra, N. Y.*

## "50% Cheaper Than Paint"

**Look Better—Wear as Well  
More Preservative**

Paint now costs more than twice as much as Cabot's stains, and painting costs more than twice as much as staining, because the stains can be applied more than twice as fast, using a wide, flat brush, or dipping. The staining effects are soft, deep, and translucent—just "natural"—no stripes, sifting, or blotches, and the creosote penetrates and thoroughly preserves the wood. You save half your painting bill, double the beauty of your house, and keep the woodwork sound by staining upon using the stains.

## Cabot's Creosote Stains

## Flivvers and Philosophies

(Continued from page 61)

learn unless you let me do it myself."

"That's all right," said Will, "but—"

"But you want me to do everything just your way," I interrupted him. "Now just let me alone a minute."

He subsided, and then, to my irritation, I couldn't get the engine started right. It would go all right as long as I had it in low, but when I tried to let it up into high it would roar a minute and then die. I couldn't think what was the matter, but I felt that I was appearing in a very undignified light, and the more the engine roared and died the madder I kept feeling at Will. He was silently criticizing me.

"You know there are different right ways of driving an automobile," I said, along the line I had been thinking that afternoon. "You aren't the only person who knows how. I might drive differently from you and yet drive very well."

Will didn't say anything to that, which made me madder still. The engine roared, gasped, and died again unpleasantly. "I want to learn to drive my own way," I said, determinedly stepping on the self-starter for the tenth time and pushing on the gas till I had to shout to be heard above the roar of the engine.

"All right," said Will in the sudden silence, "but it's going to be darn hard on the engine if it's your way to drive with the emergency brake on." I looked down, and to my horror that was just what I was doing. I bent over and removed it. Of course it was my fault, but I felt suddenly simply enraged at Will.

"You ought never," I said coldly, "to lead low from an ace."

"What?" said Will, as though he couldn't think what I was talking about.

"You did it twice to-night. It throws your partner all off. It made me think you had the king."

Will said nothing at all to that and we drove home in cold silence. But when we were getting ready for bed I went up behind him and kissed the back of his neck. I couldn't stand it to go to sleep mad. Then we laughed, and I said I wouldn't forget the emergency brake again, and he said he'd try to remember about the ace.

THEN the very next day, being Sunday, we were going on a picnic with the Edwardses. Will had to go down to the office for an hour, Father Horton being away, so he told me to look the car over and see that everything was all right. I worked over two hours on it in the heat, washed all the windows, brushed out the cushions, and put two roses in the little glass vase. I was so proud of it when Will got back.

"It's all ready," I said proudly. "Everything done that could be done."

"She's a slick-looking little car, isn't she?" said Will appreciatively. We stood looking at it proudly like parents of the valedictorian when she's making her speech. The glass shone like diamonds in the sun, and the little flowers made it look like a limousine. Will was going to drive, so I just settled down to enjoy myself.

# MACGREGOR

"Jim, did you notice how that last ball ran true to the cup—it was a MACGREGOR Master. It is BALANCED by a patented feature and cannot swerve off the line of putt as those other two balls did. Here's another Master—try it on: it'll repeat—straight to the cup."

## The Putt that Counts

Certain putts in the course of a round may mean the winning or losing of a match.

The putt that counts most, and which most depends upon the ball, is the five to ten footer—the one you may make but can't be blamed if you don't—the putt that wins the hole if it sinks.

On a wee lot of a putt the effect of an unbalanced ball may not be noticed—but on a ten footer the ball must run true if it is to drop in the cup. In this distance a slight variation in the ball will take effect. The Master Balanced Ball always runs true—can't help it if squarely struck.

All missed putts may not be your fault! So try the Master Balanced Ball.

And don't forget two other fundamentals that are to be found in this ball: DISTANCE and DURABILITY. It will fly far and it will last long.

Ask your Pro or Dealer for the Master Balanced Ball. Look for the distinctive Meridian Marking. Write today for our General Catalog.

We hadn't gone farther than the top of the hill on the Verblenck road when Will slowed down.

"Gosh, the engine's hot!" he exclaimed. "Wonder if the fan belt's slipped." He stopped and got out and looked in the hood. The fan was working all right. He drove a little farther, then he stopped again, and looked at me accusingly.

"Did you put lots of water in the radiator?" he demanded.

"Oh, my soul!" I gasped. I had forgotten all about the water. I hadn't put in a drop!

We just crept along to the nearest farmhouse, where Will got some water, and all the way he acted so aggrieved at me. "You said you'd done everything," he kept repeating.

"I did everything but that," I said.

"And that's the only thing that amounts to anything at all. You can't run an engine on a pretty vase of flowers."

I thought of how hot I had got polishing the windows and brushing out the cushions, and there Will sat saying that didn't amount to anything. It occurred to me for the first time since I was married that Will was not very understanding and appreciative.

BUT that was as nothing to the next day. I was going to take the car out alone for the first time. Will got it out of the garage for me before he left in the morning and he looked it all over, putting water in the radiator in a very conspicuous way. He came back into the house.

"Now she's all ready to start," he said, as though he were speaking to a child. "And don't forget to take off your brake when you start. There's plenty of gas and water."

"Don't talk as though I didn't know enough not to carry packages by the string," I said. "Just because I made a trifling mistake once."

"It's enough of those 'trifling mistakes' that will ruin an engine," said Will. "And I'm not going to have my engine ruined."

"Your engine!" I repeated. "I should think it was part mine. It was a wedding present to us both."

"Well, I'm not going to have my half of it ruined by stupid driving," said Will. "Either you've got to learn to drive that car right, or you've got to let it alone."

"Well, of all the nerve!" I gasped.

But Will gave me a strange look and walked off without saying another word. I couldn't get that look out of my head, and the more I thought of it and his saying what I had got to do, the more furious it made me. All the time I was making the beds and doing the breakfast dishes I was thinking of what I would say to him when he came home. I thought of different retorts, some cutting and some just coldly bitter. Finally, I thought of a dandy. It combined them all. It was cutting and independent and cold and bitter all in one remark.

I kept saying it over to myself as I got dressed to go, and the more I said it the better I liked it. I could hardly wait till Will got home! I kept thinking of it with angry satisfaction as I climbed into the car and started the engine, said it over in a whisper to myself as I took off the brake. I remembered that strange look of Will's as I threw in a lot of gas and angrily

pushed her into low. I guessed that answer would show him not to look at me like that!

There was a lot of gas on and the car started forward with a lurch. I turned the wheel out toward the street. A cold panic of terror struck me suddenly and my heart seemed to stop beating. The car did not turn at all, the steering wheel whirled loosely in my hand. Will had not unlocked the thief-proof lock! The steering gear was not connected with the wheels.

I twisted and turned it, I tried wildly to think how to stop the engine, and I couldn't think. The terror of it drove everything out of my head. I was heading straight for an iron post.

Suddenly the engine stopped. I groped for the brake, but that was too late too. The bumper hit the iron post on the end, I felt the seat tip up and I slid off onto the floor, crashing my head against the door. The car had gone off into the ditch and turned over. Taking my feet off the pedals just as I had happened to shut off the gas had killed the engine just in time to save my life.

I SAT up, unable to believe that I wasn't dead. I heard someone screaming. Dulcie and Mrs. Long came running out of Dulcie's house toward me. I climbed up and stuck my head out of the upper door.

"Oh, Dot, are you killed?" I heard Dulcie's frightened voice. "Jimmie, run down quick and get Will Horton, tell him Dot's had a terrible accident. Run quick."

Jimmie started off on a dead scared run. Mrs. Long, shaking all over, came and opened the door that opened straight into the air. I climbed out, shaking pretty hard, myself. My head ached like mad, but I didn't seem to be hurt at all. The car wasn't hurt, either, except that it would have to be turned over and have the bumper straightened. I could hardly walk; I kept shaking harder every minute, so Dulcie and Mrs. Long got hold of my arms and helped me into the house. I lay down on our living-room davenport. Both Mother and Mother Horton had gone to the Ossili picnic, so Dulcie and Mrs. Long got me cold cloths for my head.

"Just lie still, honey," Dulcie said. "Don't try to talk. We'll stay till Will gets here."

So I lay still, with the cold cloth on my head. Dulcie and Mrs. Long sat across the room talking in low voices.

"Oh, dear," Mrs. Long was saying, "and to think I used to think it was dangerous to drive a horse and buggy! I remember when I was learning to harness old Dolly—Joe wouldn't let me learn to drive till I'd learned to harness her myself—and a bee stung her and she kicked me. Joe was scared to death. We'd just been married and he was crazy about me. He thought I'd been killed."

I lay there, my head thumping, my mind going over and over Mrs. Long's words. Mrs. Long young, learning to drive a horse and buggy, Mr. Long fussing about the harnessing, me learning to drive a car, Will fussing about the engine. It was queer to have something reach down all those years and connect up old Mrs. Long and me. Oh, there's more than just the "Mrs." that's alike for all married women.

"Joe was scared to death—he was

crazy about me. He thought I'd been killed." Will would be scared, too. So Mr. Long had used to be crazy about Mrs. Long—I thought of the way he had looked at her that night of our housewarming, as though he hated her. A queer cold chill swept over me, the same feeling that I had had when I saw the iron post rushing toward me. For I suddenly recalled the way Will had looked at me that morning. It was a faint, faint copy, but it was that same kind of look. Perhaps that was the way Mr. Long first began to look at his wife, long ago, when he was still crazy about her.

And following instantly came the cutting, bitter, icy remark I had been saving up to say to Will. It was almost the kind of thing Mrs. Long would say to Joe.

I began to cry under the cold compress where they couldn't see me. I could hear the little wedding clock ticking. Oh, the idea that ever I might listen to the little clock tick—alone!

"Here comes Will!" Dulcie hurried to the door. I heard the thud of running feet up the path. "Oh, she isn't hurt! Don't look like that, Will! It's all right. Don't look like that!"

I guess Mrs. Long and Dulcie went out right away—I don't know. I tried to sit up, but I was still shaky, and in a moment Will and I were both crying.

We sat and talked a long time, Will's arm tight around me, my hand clinging right to his, the little clock tick-ticking away on the mantel.

"DOLL," said Will solemnly, "when I think what might have happened to you—to have had to remember all my life the way I went away this morning—oh, Doll!" He shuddered and held me tighter.

"Well," I said, "from now on, as long as I live, no matter what happens, I'm going to try always to be polite to you."

"I'll always try to be polite to you, too, Doll," said Will solemnly.

It sounds like a funny promise, but it was just as solemn as the one we made the night of the housewarming and, somehow, it's more practical. Many times have I remembered it in the six months that have followed. I would be all ready to say something, and I would think of Mrs. Long harnessing up her horse and buggy, of the way her husband looks at her now, I would hear our little clock ticking, and I'd just shut up.

Will has been the dearest thing in the world—he feels it was his fault not to have unlocked the steering wheel, and he says I can smash the whole car and he won't have any kick if I just don't hurt myself. It's a heavenly feeling we have for each other and I'm not going to put any strain I don't have to on our promise. I have never let Will give me another lesson on the car. I got Rosemary to teach me, and Will says now I'm a fine driver.

It is strange, as I said before, how being married makes you understand other married women, how it makes you feel older. I have always felt that anything you'd call a crisis, for instance, belonged to people a million years older than us. And yet, I've talked about Will's teaching me to drive to lots of other married women, and, old and young, all those who have been taught by their own husbands agree that we have passed one of the crises of our married life.

## \$95 an Hour!

"Every hour I spent on my I. C. S. Course has been worth \$95 to me! My position, my \$5,000 a year income, my home, my family's happiness—I owe it all to my spare-time training with the International Correspondence Schools!"

Every mail brings letters from some of the thousands of I. C. S. students telling of promotions or increases in salary as the rewards of spare-time study.

What are you doing with the hours after supper? Can you afford to let them slip by unimproved when you can easily make them mean so much? One hour a day spent with the I. C. S. will prepare you for the position you want in the work you like best. Yes, it will! Put it up to us to prove it. Mark and mail this coupon now!

Persons residing in Canada should send this coupon to the International Correspondence Schools Canadian, Limited, Montreal, Canada.

he said, 'I might give you *three cents* a pound for it. *But I ain't.*'

"Of course, since I've been in Newburgh I haven't gone out through the country collecting. The small dealers do that and sell their loads to me. But both the farm and town people know me—I'm more or less of a fixture here, you see—and they bring me a lot of scrap themselves. It's not uncommon for country folks to drive up with a spring-wagon full of scrap iron that has been rusting for years in some outbuilding. And you can find people here in the city steering the family car around to my place with the back seat stacked up with piles of newspapers and magazines and other left-overs from spring housecleaning.

"One trouble with saving paper, of course, is the fire risk. Superintendents and janitors of apartment houses in large cities, and even in smaller places like this, make money collecting and selling the stuff thrown away by the tenants. Many of them do such a thriving business they can afford a waste-paper baler. As a matter of fact, in most big cities they are obliged to have one, to keep on the right side of the fire insurance regulations and city ordinances that prevent the collection of loose paper in buildings. Baled paper burns fairly slowly, but a pile of waste paper kicked about over a basement floor has been the cause of many a fire.

"YEARS ago the junk dealer used to get hold of many a lot of old brass and-irons, candlesticks, and such things, which he pounded up for shipment like so many flywheels. After these things went out of style, the housewife consigned them to the junk pile and replaced them with something 'up to date.' Nowadays these trinkets are gobbled up by antique dealers and we seldom see them.

"Restaurant keepers have to warn their help to be careful in shaking cloths and dumping refuse, that silver tableware doesn't get mixed up with garbage. It is said that one of the big chain eating house concerns keep one man busy in each restaurant sorting table scraps; and that these scrap pickers recover more than enough silverware to pay their wages.

"Not all the scrap that the junk man collects is smashed up to be sent to the mill. Lots of things are reclaimed by the collectors. They get a great many old stoves, for instance, which may appear to be in the last stages of decay, but are really only badly rusted. If the parts are all there they scale off the rust, give the stove a stiff brushing, put on a coat of benzine blacking, and set it aside for an hour or so to dry. Then it can be polished and sold to a dealer, or to some poor family that can make good use of it for years.

"Manufacturers and other business men kick like steers at the price they are offered for huge pieces of machinery such as boilers, locomotives, and power-house apparatus, that have broken down and are ready for the scrap heap. I know of one company that had a giant machine they wanted to get rid of. It was so big that originally they had to set it up and then build the factory walls around it. The flywheel alone was twenty-five feet across. In the pit under the machine was a pool of grease, oil, and water that had been dripping off the bearings for years. That made it particularly hard for the

## Corns

### Lift Right Off

Drop a little "Freezone" on a touchy corn or callus for a few nights. Instantly it stops aching, then shortly you lift it right off. Doesn't hurt a bit.

You can lift off every hard corn, soft corn, corn between the toes, and the "hard-skin" calluses on bottom of feet. Just get a bottle of "Freezone" at any drug store, anywhere.

Edward Wesley and Co., Cincinnati, O.

men who had to get down there with oxyacetylene torches and cut it up.

"When the junk man said that he would tackle the job if the firm would pay for the labor, the owner almost ordered him out of the building. In those days the acetylene torch was in the early stages of its development and blowpipe men came high, the equipment and the operator's wages running as high as thirty dollars a day.

"After the manufacturer had called up a number of junk dealers, and found that they didn't care a hang whether he ever disposed of his white elephant, he cooled down a bit. Presently he paid his first bidder a call and coaxed him to get the machine out in his own way and on his own terms. At that, the dealer said it was one of the toughest pieces of work he ever tackled.

"Some owners of old-fashioned safes weighing from two to six tons seem surprised that the junk man isn't willing to pay perfectly good money for them. But the metal is often hardly worth cutting up and it's a nasty job to handle, especially in the upper floors of buildings. Often the owner has to pay for having the safe cut up and carted to the junk yard.

**WASTE** materials of every kind that, not so many years ago, were considered worthless trash are now piled, sorted, and sold, to be turned into the raw material for the making of useful products.

"The old newspaper that the housewife sells may return to her a few months later filled with bonbons that her husband brings home on Saturday night. Her cast-off aprons, bedding, and other rags come back as the fine bond paper on which she writes her letters. The farmer's discarded hay rope may turn up again in the form of the paper flour sack he brings home from the grocery store.

"The old faucets, pipes, and bits of scrap iron you sell may appear again in important parts of the motor in your new car. You discard the rubber top of that same automobile when it wears out, and it comes home once more as your winter overshoes or toy balloons for the children. Tin cans and tin foil are turned into window weights and various other articles.

"Old magazines are de-inked and made once more into print paper. High-grade book paper and medium-grade writing paper are made from sail cloth, canvas awnings, and all kinds of soiled rags. Low-grade cotton rags go into roofing paper. It may be that some of the paper money you are carrying in your pocket was made from factory clippings of the very shirt and collar you are wearing. Bagging is used for tissue paper, while the bulk of the woolen goods goes into shoddy and turns up again in your new spring suit. I have heard of a plant in Ohio that handles carloads of old shoes, just to extract the chemicals from them, and I know of other plants that do nothing but reclaim the rubber cement from worn-out raincoats and from the litter of clippings left over when the coats are cut out.

"Old paint brushes, worn and soaked with white lead, are now saved and remade into good scrubbing brushes. I have read that the worn-out tooth fillings the dentist saves, along with old silver spoons and other gold and silver scrap, amount to over \$20,000,000 a year.

## Write Ads for Big Pay

Ad-writing is one of the highest paid professions in the world. Statistics prove this. Hundreds of ad-writers earn \$100—\$200—\$300 a week. Many of our most successful ad-writers never dreamed they could write ads until they tried. One of our star ad-writers was once a \$24-2-week bookkeeper. Another was a printer. Another was a shipping clerk. No special "gift" required. It's mainly a matter of training. Get the specialized training and opportunities open up to you everywhere.

## WANTED More Ad-Writers

Not nearly enough competent ad-writers! Look at the want-ads of your daily papers. Always a call for ad-writers. It's a wonder more ambitious men and women do not take up this work. It's not only lucrative but fascinating! No work in the world more absorbing.

Become an ad-writer if you want to be the man in demand today. You can learn at home in your spare time. Page-Davis experts will teach you every phase of the work—laying out ads, writing headlines, describing products, selecting type, choosing illustrations, etc. Page-Davis Training has a reputation. It gives you a big advantage in landing the high-salaried job.

## FREE BOOK

This book tells you all about Advertising and the Course which any ad-man will tell you is best. Pictures of advertising stars and their work. Interesting facts about advertising men's salaries; also about what Page-Davis graduates are doing. Details of prices, terms, money back guarantee, etc. Write today for this book and see what a wonderful opportunity Advertising offers you.

### Mail Coupon

The coupon or a letter or postcard brings our big book postpaid and free to you. Right now we are making a special free offer of a set of Ad-Man's Working Tools. Particulars sent you with free book. Clip and mail coupon NOW!

## New OLIVER

With Standard Three Bank Keyboard

Here it is. Our NEW Oliver, "Quiet Speedster" Model, with every modern improvement and refinement, including the standard 3-bank keyboard, so any typist can use it at once without loss of speed or output. The easiest machine and keyboard for beginners. And we GUARANTEE to save you \$5 to \$10, or more, on the price of other standard machines. This is the finest typewriter we have ever built. The fastest, most silent, easiest to operate.

### FREE TRIAL—Write Today

We will send you this latest and greatest Oliver on FREE TRIAL for a week. Test it. Use it. Compare its speed, its typing, its appearance. Note the simple durability and strength. Then if you are convinced it is the best typewriter you ever used pay for it at our SPECIAL LOW PRICE on time or for cash, if not return it at our expense. You run no risk.

### CATALOG FREE—Write Today

Write AT ONCE for our FREE catalog, 1923 edition. It will explain to you WHY and HOW we can afford to sell you this new typewriter for \$25 to \$30 less than other standard machines. Get our free trial offer, our terms and cash discount. This request places you under no obligation.

THE OLIVER TYPEWRITER COMPANY  
1066 Oliver Typewriter Building Chicago

"Take the history of coal tar, which is one of the most surprising things I know about. Not so long ago it was considered to be of little or no value. I never dreamed that within a few years the carbolic oil distilled from the ordinary lump coal that you put in the stove or furnace on cold winter mornings would be used in making aspirin and a thousand other kinds of medicine, as well as benzol, creosote oil, benzene, pitch, perfume, kodak films, near-silk, and airplane wings. But the most important substance of all made from coal tar is aniline dye. In fact, the dye industry of to-day is largely built up from the chemicals contained in coal tar.

"In dressing granite slabs there used to be a big loss. A large percentage of the rock quarried was chipped off and cast away when the granite was worked down. But the chips are not thrown away any more. The big pieces make fine roadbeds and the smaller chips go into the material making up granolithic pavements. Even the wheel grit worn away in sharpening knives and scissors makes a cement that can't be beaten for sealing furnace boxes.

"The scraps from cork cuttings used to be tossed on the dump. At last the manufacturers found it could be mixed with cement to hold it together, and made up into crude linoleum. It is also used in lining icehouses, as heat and cold find trouble in passing through it. And since it is light and damp-proof, it makes good stuffing for mattresses for use on shipboard. If the boat should happen to strike a rock, you could float on a cork mattress, while the ordinary kind would go down.

"The best metals on the market to-day are made from old scrap melted down and used with a certain proportion of the fresh ore. This is why we are able to buy metal things so cheaply. And manufacturers have learned to use all the by-products, too. How to get rid of the slag from blast furnaces, which comes out two or three times as bulky as the iron from which it is separated, used to be one of the biggest problems the steel men had to face. They paid the railroad companies to haul it out and scatter it along the right-of-way. To-day a large portion of that slag is used for road material, garden rollers, and slabs for pavements, as well as for making brick, imitation tile, and cornices.

"EVEN though more than a billion dollars a year of waste material is being salvaged these days—and some of the biggest men in the country are spending their lives figuring out new ways of using by-products, scraps, and rubbish—a real fortune is going up in the smoke of backyard bonfires of every city and town in the country. I have seen carefully worked out estimates that housewives of America could save out of their waste baskets, scrap heaps, and rag bags enough money to run the National Government a whole year in times of peace.

"Great stacks of paper and rags that are now thrown away could easily be kept. As an example of what a junk-saving drive can accomplish, I remember reading in the paper that the people of the little town of Lancaster, Pennsylvania, managed to collect 160,000 pounds of old paper in a single week.

"A man from the Middle West told me not long ago of an interesting experiment tried by the superintendent of the Chi-

tago House of Correction. He put the inmates to work salvaging the materials in the city waste pile, and in the first year they saved enough to pay for the upkeep of the place. It cost the city fifty cents a day to support one old prisoner. But while serving a year's sentence, he salvaged from worn-out electric bulbs, enough platinum to sell for *ten thousand dollars*. . . . I wouldn't advise you to go into the business of collecting old bulbs, however," Hart added with a smile. "After the war started they found a substitute for the expensive platinum."

"When the war was on and raw material was needed for a million purposes, the waste reclamation service of the Department of Commerce salvaged for war purposes \$900,000,000 worth of scrap iron, \$300,000,000 of old rubber, \$100,000,000 worth of cotton and wool waste, and \$75,000,000 of waste paper and rags. This shows what can be done in a pinch."

"THE waste material to be salvaged today is many times as great as it was when I started in the business sixty years ago. Heavy industrial machines wear out and have to be replaced, and bridges get dangerous for traffic and new ones have to be put up. Scrapping such an enormous amount of material as that contained in a bridge is too big a chunk for the little fellow to bite off. So large firms have been organized, capitalized at hundreds of thousands of dollars, to handle this work."

"I know of one Philadelphia concern that buys battleships, torpedo boat destroyers, worn-out ocean liners, trolley lines, and bankrupt railroads—in fact, it buys anything from the lightest to the heaviest scrap in the world. Not so long ago the workmen of this company dismantled and carted away the old Columbia steel bridge over the Schuylkill River in less than sixty days."

"The heavy scrap is cut up with the acetylene blow-torch or else with enormous shears that can slash right through *six square inches of steel*. Those I have up on the hill are not nearly so powerful."

"Soldiers coming back from the European War have told me that a big battlefield after a day's fighting looks like a junk man's paradise. Tons upon tons of battered guns, bayonets, uniforms, shells that failed to go off, hand grenades, helmets, and smashed airplanes, formerly worth millions—and still valuable—are salvaged by soldiers known in the army as 'ragpickers.'"

"All of the stuff that can possibly be used again is hauled back of the lines to be fixed up. Waste metal and other waste material is then sorted, to be melted down later. I have heard that some of the army bands were put on the job of cleaning up after a fight. In one case a brigadier general ordered out his whole army to clean up a battlefield just taken from the Germans."

**MERLE CROWELL** tells next month the business romance of the Ley Brothers, famous contractors. They have tackled and conquered many a vast construction enterprise, but the greatest piece of building they have done is found in their own careers. "Two Boys Who Never 'Overlooked a Bet'" is the subject of the interview.

"I think that day was the most painful of my life. I was battling between my ambition to get a start as an artist and my bashfulness. It was physical suffering to force myself to ask for work. Probably I never would have gathered up enough courage to go down to the Philadelphia 'Ledger' office if it had not been for my mother. I had tried it a couple of times and almost reached the door; but one look at my clothes was enough to start me running away. My mother finally went with me.

"Look at me now, yes, look at me a year later, when I got to be one of the freshest office boys in the shop, and it would be hard to recognize the same fellow. To-day I could walk into King George's office and put my feet on his table, and never blush. See what education will do!

"Well, they gave me the job of office boy at the 'Ledger' at two dollars a week. But the idea of being an artist still stuck in my head. At every opportunity I sneaked into the art department and looked things over, picking up such information as I could. I studied at night, too, both electricity and drawing, and also designed some curtains. Mr. Gilbert Allen Geist, now at the Texas Agricultural and Mechanical College, took an interest in me. In fact, most of the men around the 'Ledger' were good to me, and offered advice and encouragement.

"FINALLY, I wedged my way into the art department and managed to get along by keeping quiet, so they wouldn't know I was there. I will say that Michelangelo himself couldn't retouch photographs any better than I could! My specialty was painting whiskers on photographs of men who had grown them after having their pictures taken. Probably my experience designing lace curtains helped in that.

"I went to the 'Ledger' in 1910. I left it to take a job on the Washington 'Times' at a lower salary. I figured that I would have a better chance if I got away from the place where they remembered me as the office boy. Maybe I had some idea of trying to make them think I was a real artist. The Washington 'Times' hired me as a retoucher and letterer.

"I have been seriously libeled around Philadelphia and Washington. The allegation that I took my cartoons to the editor of the 'Ledger,' and that he mistook them for lace curtain patterns, is false. Nor is it true that the lace curtain manufacturers thought I was drawing patterns and used my cartoons for curtain designs. Slanderers who claim that I founded the cubist school of art are all wrong. Anyone who can take a picture of Lydia E. Pinkham, put whiskers on it, and print it as King Ferdinand of Bulgaria, is a real artist.

"If more proof that I was an honest-to-goodness artist is needed it can be furnished by evidence that I attended the Philadelphia Academy of Fine Arts and painted in oil. All real artists paint in oil. They gave me a diploma stating that I used more oil than any other pupil in the academy. I attended the school of fine arts at night. My masterpiece in oil I submitted for the Rockefeller prize, but it was turned down. I still feel that this was an act of injustice, considering the amount of oil I used.

"I was aching from this injustice when the Washington 'Times' took me on. Not

## They know why they prefer "B.V.D."

THE Unvarying Quality, Long Wear and Famous Fit of "B.V.D." make it the underwear of men who put thought into getting the most comfort and value out of the things they buy. They always demand the "B.V.D." Red Woven Label.

## Easy to Learn Cartooning at Home

Earn \$60 to \$200 a Week in This Fascinating Profession!

Special. Thousands of artists are contacted and millions of new ideas are being developed. You can earn \$6000 or over \$10000 a year. You can learn to draw these cartoons that sell. Many of our students are now making big money.

### Easy Home-Study Method

Organized by one of America's foremost cartoonists, this course teaches you to originate and draw all kinds of cartoons. You learn at home in spare time, yet all your work receives through the mail the individual help and criticism of prominent cartoon experts. Many successful cartoonists taught by this method.

## Send for Free Book

Learn more about this method and the amazing opportunities open to you in this attractive fast-growing field. Our newly prepared free book is crammed with valuable information about this work, and explains fully this easy home-study method. Mail post card or letter for it TODAY!

WASHINGTON SCHOOL OF CARTOONING  
1148 Marden Building Washington, D. C.

long after I went to work, I wrote to Lee Wilson, the editor, asking him for more money, or for some money—I've forgotten which. That little accident proved the turning point of my career. It happened because I hadn't nerve enough to go in and ask him for the money, face to face. He came out into the art department, crying with astonishment, 'An artist who can spell!' He exclaimed. 'A treasure! Unbelievable! Raise his pay at once, give him ten dollars a week.'

"I was on my road to fame. Night clerks, even, recognized me. Since then I have become acquainted with almost everyone excepting a bank teller."

"BUGS" has almost forgotten that his name ever was Arthur, and there is a general misapprehension as to how he acquired his nickname. After he had been working for the Washington "Times" a few months he was called to do sports cartoons. Presently he evolved a couple of small figures which were printed in baseball articles. He called them "Bugs" and "Ump." They were baseballs with queer little arms, legs, and hands, and they were shown in different attitudes every day.

The little figures proved extremely popular, especially "Bugs," who was shown daily in some attitude expressing the emotions of Washington baseball fans when the team won or lost. The nickname "Bugs" fastened itself upon their creator, and in his desire for recognition of his work he adopted the name and commenced to sign articles with it.

All the time that Bugs was making others laugh, he was grinning that odd, twisted little grin which proved that he "knew what the jest was worth." One day he wrote a paragraph that changed his entire life. It was in 1915, before the United States decided to get into the World War. The paragraph read:

The Lady who thinks the atrocities of war are too terrible for anything, will soon go away for the summer and leave the cat with a jar of condensed milk and no can opener.

"Jack" Tennant, who is managing editor of the "Evening World" got a laugh out of it and reprinted it for the benefit of his readers. Then he asked who "Bugs" Baer was. Finally he sought information from the sporting department, which, marveling at the ignorance of managing editors, told him. He wrote for Bugs to come to New York.

For three years after his arrival in New York, Bugs kept the readers of the "World" roaring and grinning. They were joined by readers of other papers throughout the country, to which his writings were syndicated. The war took him away for a time, and when he returned he joined the Hearst organization.

Queerly enough, Bugs's favorite reading is the Bible and Shakespeare. He really likes to read Shakespeare. Even more, perhaps, than he likes to read dime-novel thrillers.

He has become one of the closest followers of national and international events. He reports crownings of kings and making of presidents—all in the same style.

His is the jazz school of literature and of philosophy—but nine tenths of the readers skip what Lloyd George says about anything to read Bugs's views on the same subject.

## Purebred Holstein Milk

is so widely recommended for infant and baby feeding because it is not excessively rich in butter-fat—testing between 3.25 and 3.75 per cent—and because it comes from large, vigorous, healthy cattle. Purebred Holstein milk is naturally light in color.

If your baby is not thriving as it should, try purebred Holstein milk. Ask your doctor.

If your milkman can not supply you with purebred Holstein milk, write us and we will assist you in securing it.

Write for our booklet on "The Milk Bond to Child Health," sent prepaid upon request.

# Inside Facts About Smoking and Smokers

(Continued from page 57)

A good many men whose work is indoors where they cannot smoke, chew tobacco, because the sedative effect is much the same as that of smoking. I have noticed that practically all jurists use tobacco. Many of them who smoke when off the bench, chew when engaged in their official duties. The heaviest user of chewing tobacco I have ever known was a judge of the Federal court. He used four papers of chewing tobacco a day.

It has been estimated that in the United States eight out of ten men over twenty-one years of age are accustomed to smoking. The last census shows that there were 31,403,370 men over twenty-one. Eighty per cent of this number is 25,122,696, which gives us approximately the number of adult men smokers. There seems to be no way of estimating with the same exactness the number of women who smoke. However, the use of tobacco among them is far more common now than in former years.

Mark Twain was well known for his fondness for tobacco. A heavy smoker, he used the weed in every form—cigars, stogies, cigarettes, briars, corn cobs, and calabashes.

SOME years before the humorist's death a cigar salesman I know presented Mr. Clemens with a very choice calabash. To show his appreciation, Clemens went to a photographer and had his photograph taken in six different poses, and in each he was either smoking the pipe or "cradling" it affectionately. He gave these photographs to the salesman, and told him that he liked the calabash better than any pipe he had previously owned.

One day, some months later, Mr. Clemens went to this salesman and bought a rather large quantity of tobacco, which he said was for use in his "good old calabash."

"It's a long time since you've bought any cigars," said the salesman. "How is that, Mr. Clemens? Don't you smoke cigars any more?"

Mr. Clemens looked behind him as though alarmed. Then he said in a whisper. "Yes, yes, I still smoke cigars; but don't tell anybody. It tempts my friends to give me some, and as I've always been loyal to my friends I find I smoke them. A friend gave me several boxes last week."

There was a peculiar curl about the humorist's nostrils as he spoke.

"I hope," said the clerk, "that these particular cigars are good ones."

"That's very kind of you, I'm sure," said Mr. Clemens; "but the best wishes in the world won't help these cigars any. They're awful—awful. Every time you smoke one the wrapper comes loose and flops about like a regular Mother Hubbard."

"Maybe the quality of the filler makes up for that defect somewhat," offered the clerk hopefully.

The richness of fine jewelry delights the man of correct grooming; a readiness and certainty of performance amplifies daily the pleasure of possession . . .

Every idle stream or waterfall that is put to work, and furnishes light and power to homes and factories many miles away, means a saving in coal and, what is more important, a saving in human energies.

## How far can a waterfall fall?

In 1891 General Electric Company equipped an electric plant at Pomona, California, for transmitting electric power 28 miles—a record.

Improvements in electrical development do not "happen." They come from the tireless research of trained scientists. The General Electric Company invests in the work of its Research Laboratories more than a million dollars a year.

Today electric power from a waterfall is carried ten times as far.

Some day remote farm homes will have electricity and streams that now yield nothing will be yielding power and light.

# GENERAL ELECTRIC

## 40,000 Opportunities in Hotels!

You can have one of these well-paid, pleasant, executive positions—40,000 of them in the big hotels of the United States—now America's fourth largest industry. Statistics show that one in every ten hotels will have an opening for a manager this year. Thousands of other positions are also open to those who qualify through training.

The Lewis Hotel Training Schools give you the valuable knowledge that is fast taking some of the most successful hotel men years to obtain. They are now making \$5,000 to \$25,000 a year. All of your training will be under the personal direction of Clifford Lewis—a hotel expert of national reputation. A few operations hours a week given to the student, plus the training of the course will give you the training for a good position, a big salary, and a handsome salary. The training will be in close contact with your present work or occupation.

Send today for Free Book, "Your Big Opportunity." (Don't wait a minute more than the opportunity of a lifetime. Write today now.) Your white future may depend on it.

**LEWIS HOTEL TRAINING SCHOOLS**

Founded 1914  
The only School for Hotel Training

"The filler!" exclaimed Clemens, who was so excited that his voice was raised somewhat. "Confidentially, I'll tell you, young man, that the filler in those cigars is like the bad habits you've tried to give up! You want to forget 'em, but you simply can't!"

A man who uses far less tobacco than Mark Twain was accustomed to would undoubtedly be classed by many people as a heavy smoker. The ordinary heavy pipe smoker uses a little less than three ounces of tobacco a day—between twenty and thirty pipefuls. Many moderate smokers use not more than four or five pipefuls a day, one after each meal, one in the middle of the forenoon and one in the afternoon—considerably less than an ounce.

People often ask me this question—about how much tobacco various kinds of smokers use—so I imagine the subject may be interesting to most of us, whether or not we are smokers. I know a good many cigar users who limit themselves to one after each meal. Others use from five to ten a day. While some men take not more than five cigars all day long, others will smoke that many before ten o'clock in the morning. Some heavy smokers keep a cigar going continuously, smoking as many as twenty or thirty a day.

I HAVE found that cigar smokers as a rule are among the most particular as to the quality of their tobacco. Some well-to-do men never smoke a cigar that has not been made up from stock especially selected for them. These men usually order anywhere from a thousand to ten thousand at a time. The leaf is selected by an expert, who goes to Havana especially for this purpose and who knows from long experience just the quality, strength, and color these special customers prefer.

The price of cigars made to fill special orders of this kind ranges from forty cents to a dollar and a half. Sometimes the customer has them kept for aging in the humidors of the cigar company, to be delivered as he requires them. Other customers have their own large humidors, with a capacity for anywhere from several hundred to several thousand cigars. Some of these customers are to-day using cigars that were made for them in 1908, and it is the rule with customers of this kind to have made up in advance a stock that will last them for two or three years at least.

What is probably the finest private cigar humidor in the world was built some years ago in the wine cellar of the Fifth Avenue home of a New York financier. It is made of porcelain and is six feet high, six feet wide, and two and a half feet deep. It has three compartments, with a capacity for ten thousand cigars. One compartment is for new cigars that are to be kept a long time and allowed to season. The second is for cigars that have dried out after being exposed to the air. The third is for cigars that have been properly aged and are in just the proper condition for use.

The cost of this humidor was over five thousand dollars. In the old days, the owner, an intimate friend of the late J. P. Morgan, always kept on hand a considerable supply of long cigars of specially selected leaf which cost about a dollar and

a half. These were Mr. Morgan's favorite smoke.

The cigar humidors most commonly used hold anywhere from fifty to five hundred cigars. These are made of walnut, oak, mahogany, and other high-grade woods, and some are lined with porcelain. They cost anywhere from three and a half to several hundred dollars.

Pipe smokers who are disposed to be particular about their "blends" are often even harder to please than the particular cigar smoker. I know a good many men who buy three or four different kinds of pipe tobacco, which they themselves mix as suits their taste. One man I know of blends together as many as twelve different kinds. Another man owns a farm in Connecticut, where he raises tobacco for his own use, and in preparing his mixture he first boils some of his home-grown tobacco and then heats it in an oven. To this he adds Kentucky, Burley, Virginia, and Havana in the proportion which he has found most pleasing.

The secret of any high-grade pipe mixture that burns slowly and uniformly is always in the blending and in the proper aging of the various tobaccos used. The base of practically all high-grade mixtures is either Virginia or Kentucky Burley, to which proper quantities of Turkish, Perique, and Latakia have been added.

Turkish tobacco is grown throughout the Turkish Empire. It has a small, fine leaf and is highly aromatic. When blended with a mild type of Virginia or Burley, it produces an extremely mild mixture. Perique is grown in the Mississippi River bottom lands, mainly in St. James and Assumption Parishes of Louisiana. Of fine fiber, rich, gummy, and dark, it is almost never smoked without blending, but is added to a mixture to give strength. When used in too great amounts it makes a mixture heavy and too strong for continued smoking. Latakia is grown in Syria. Dark in color, highly aromatic, but not strong, it is used in mixtures to aid in reducing "bite" or sharpness, and always gives the blend a certain pungency.

**PIPE** smoking is far more common today than it was five or six years ago. To some extent this increased popularity of the pipe is due to the fact that many Americans have learned to how great an extent the pipe is used abroad. Formerly, it was quite unusual in this country to see a well-dressed man using a pipe on the street, but it is not so now.

Some smokers are enthusiastic collectors of pipes. I know one who has a pipe for almost every day in the year, and to each he has given a name. On February 22d, he smokes a pipe which he calls "Martha Washington." On Lincoln's birthday he smokes "The Log Cabin." His Fourth of July pipe is called "Paul Revere." He celebrates the fall of the Bastille by smoking "Robespierre." One pipe he calls "The Egg," and another is known as "College Bend." His "Poker" pipe has a flat bottom, so that it will stand up without support. Recently he added a new pipe to his collection for smoking on Armistice Day. He calls it "The Army and Navy."

A few smokers prefer the clay pipe to any other kind. I know of one man who always buys clay pipes, breaks the stems

## STEFco

Buildings come in seven general types to suit every industrial need.

Clear Span

Low Crane

High Crane

Monitor

Semi-Monitor

Valley

Sawtooth

Here's every type you could possibly get in specially designed buildings. You can save engineering costs and delays the Stefco way

**STEFco**  
CORPORATED  
*Ready-Built*  
**STEEL BUILDINGS**

## Buy STEFco and Save the Difference for Working Capital!

Here's fireproof, permanent, construction at half the cost of brick or concrete—and in a fraction of the time

**T**HE wise executive today realizes that architecture won't earn dividends. He knows that 5,000 or 50,000 square feet of space means just that—other things being equal—and he wants that space for the smallest possible investment. STEFco is his answer.

### \$20,000 Worth of Factory for only \$8,500

Think what it means to build at these figures—to have that extra \$11,500 for working capital! Little wonder the demand for STEFco Buildings is increasing with leaps and bounds when they offer such a saving, in fireproof, permanent, solid steel construction.

### Thousands in Use—

Rendering a Super-Service by Keeping Plant Investment Down

For seven years the STEFco idea has been tried in industry's crucible—and every year has seen it grow more popular—and now STEFco Ready Built Steel Buildings are being used in every American industry for warehouses, foundries, machine shops and factories of all kinds.

### No Matter What Business You Are in STEFco Buildings Are Designed to Suit Your Needs

Seven types provide a range of sizes to suit any possible requirements—from 10 feet wide to any limit of width and length desired. All structural steel trusses provide for any overhead loads such as trolley distributing systems, line shafting, etc. We know of no industrial need that is not met by STEFco standard ready-to-ship units.

### 90% Completed at Factory—Immediate Shipment

Now is the time to build for the greatest era of prosperity we have seen in a decade—and now is the time to build wisely—to get more facilities—to get more facilities per dollar. Our service bureau is anxious to make suggestions without any obligation. Fill out the coupon today—or give it to your secretary—now! Get the facts—act! Remember—"If one-story construction will meet your requirements STEFco is your answer." Do it today.

## Will You Take Cash For Your Spare Time?

What is your spare time worth? Will you take \$15 to \$35 a week for a few hours a day? Read my offer.

I must have at once a limited number of refined, cultured women in every community who will take cash for their spare time. An amazing new scientific discovery has been made which assures radiant beauty to every woman—in five days. A big profit is ready and waiting for just telling other women where they can get this wonderful new discovery. Just your spare time will pay you well. Others are making from \$15 to \$35 a week. BEAUTY OUTFIT given. Write me immediately and I'll explain the whole wonderful plan to you and tell you how you can secure my Beauty Outfit. No obligation. I will finance you. You can start earning money at once if you write to me now. MARIE FRANZAN, Dept. 346, 2707 Cottage Grove Avenue, Chicago, Ill.

## Study Journalism

Successful journalists climb high in other fields of endeavor. For journalistic training develops clear, quick thinking, keen analysis of men and situations—the traits that are essential to success in any line.

Study Journalism, at home, under Prof. Robert Wilson Neal, A. M., eminent teacher and editor, author of "Editorial and Editorial Writing" (an authoritative book used by scores of newspapers and in many universities). Prof. Neal offers thorough, individual instruction in reporting, editorial and article writing, magazine contributing, painstaking criticism—real help.

150 page catalog free. Please address: The Home Correspondence School Dept. 93 Est. 1897 Springfield, Mass.

Boers and were introduced into England by soldiers returning from the Transvaal after the Boer War.

I have traveled a great deal in all parts of the United States, and have been interested to observe how different kinds of tobacco differ in popularity in various parts of the country. More cigars are sold per capita on the Pacific Coast than anywhere else. The reason for this is, I think, the mildness of the climate. Many men prefer smoking cigars when out of doors, and there is more good outdoor weather on the Pacific Coast than elsewhere.

Another reason is that people on the Pacific Coast do not take life in such a hurry as they do in the East, and the cigar is generally regarded as the leisurely smoke. Nervous people are seldom very fond of tobacco in this form. They prefer smoking three or four cigarettes to one cigar.

In the large cities throughout the country—New York, Chicago, Philadelphia, Boston, St. Louis, New Orleans—far more cigars are sold per capita than in the smaller towns and cities, or in the country districts. The reason for this is that our cities always have a large floating population. Many of these visitors use cigars when in the city, though at home they may prefer a briar or even a cob.

In our Southern states the blended Virginia cigarette is the most popular form in which tobacco is used. Fewer cigars are sold there than in any other part of the country.

Scrap tobacco for both chewing and smoking is most popular in the Middle West. This is due largely to industrial conditions, for in the Middle West a large proportion of men who are employed in factories where smoking is not permitted because of the danger from fire, chew. Many people think this kind of tobacco is literally made of scraps, but the fact is that it is a fair grade of tobacco which is cut up rough and prepared either plain or sweetened with licorice, molasses, or glycerin.

More plug tobacco is used in New England than in any other part of the country. The liking for it has come down from the farmers, sailors, and whalers of thirty or forty years ago, with whom it was very popular. It is much less commonly used than formerly, however, scrap tobacco having taken its place.

The average smoker uses more tobacco in summer than in winter. This is simply because at this season he is likely to spend more time out of doors.

TAKING the country as a whole, the cigarette is the most popular form in which tobacco is used. The cigarettes sold outnumber the cigars nearly eight and a half times. The exact figures for the year ending in June, 1922, show that the number of cigarettes used was 50,058,250,357; cigars, 6,621,173,340; chewing and smoking tobacco, 368,563,368 pounds.

The highest-priced cigar carried in stock to-day by any considerable number of stores sells for \$1.50, though formerly a few stores carried a cigar that sold for \$4. This \$1.50 cigar is an all-Havana between nine and ten inches long. The longest cigar sold to-day is fourteen inches, and costs ninety cents.

The most popular cigars are those

## What Are You Thinking About?

Day-dreaming led many a man to make plans that brought him big success. Don't be ashamed when your thoughts are wandering away, when you dream that you are a leader of men—a doer of big things in the business world—a builder of lasting structures. Your day-dreams are an indication of your ambition and of your desire to accomplish things. The man who never dreams has no imagination, he will not get very far. But you can make your dreams real—You can materialize your ambition.

Just dreaming alone won't do. Hitch your dreams up to facts and you will go far. You will get the facts through special training along the line in which you want to succeed. And the place to get just that training is the American School. This is proven by the quarter of a century of successful experience we have in helping many thousands of men and women gain an enviable place in business and social life.

Another reason why the American School is the place to get your training—it is not a business corporation but a Chartered Educational Institution, incorporated not for profit. Space here is too limited to tell you of all the advantages you will gain by getting your training from the American School, but the coupon will bring you full information and a descriptive book, without cost or obligation to you. Fill out and mail the coupon NOW, while you are thinking about it. No agents will bother you.

Sold by All Plumbers and Steamfitters

which range in price from eight to fifteen cents. More than 2,525,000,000 of them were sold last year. Next in popularity were the little cigars, running in price up to five cents. Of these 2,285,000,000 were sold. Next comes the cigar costing between five and eight cents; then those from fifteen to twenty cents. Cigars costing twenty cents and up were sold to the number of 32,530,000 last year. The highest-priced cigar which can be said to be really popular sells for thirty cents.

A good many smokers have asked me about the relative expense of smoking cigars, cigarettes, and pipe tobacco. Cigar smoking is the most expensive, of course, owing to the cost of selecting the leaf and of the workmanship. Pipe smoking is the most economical. A comparison of the cost of these three tobaccos can be arrived at as follows:

A man can buy two ounces of scrap tobacco for a nickel, or a pound for forty cents. He can buy a pound of good pipe tobacco, such as Butley, Virginia, Kentucky, or Maryland for a dollar and forty cents.

For the same amount of money—one dollar and forty cents—a man can buy fourteen cigars of good quality; but these cigars will weigh two and a half ounces as against the pound of pipe tobacco. The smoker who buys a hundred cigarettes for one dollar and eighty cents gets about ten ounces of tobacco.

The most popular cigarettes to-day are those priced at from fifteen to twenty cents. The most expensive cost thirteen dollars a hundred. The largest cigarette, known as the "after-dinner cigarette," is six inches long and costs five cents. The highest-priced pipe tobacco on the market to-day is imported from England and sells for ten dollars a pound. The average price of the higher grade pipe mixtures ranges between two and four dollars a pound.

THE average man is inclined to think that the cigar with a light-colored wrapper is always a mild one. The fact is, however, that a cigar with a dark-colored wrapper may be just as mild. Nevertheless, it is perfectly true that the cigar which most pleases a man's eye best pleases his taste.

Light-colored wrappers are often made of leaves which have been cured quickly. It is only through this process that the leaf can be made to come out "light." Thus, it sometimes happens that a light-colored, poorly-cured wrapper may be sharp and peppery to the lip, misleading the smoker into thinking that his light cigar is not as mild as a tobacco with a darker, well-ripened leaf.

Actually, the mildness or strength of a cigar is determined by the quality of the tobacco used and the process of curing. The "color mark" on a cigar box indicates nothing as to the strength of the cigars. This mark is used simply so that all the cigars in one box shall have a uniform appearance. The same "filler" may be used in a Claro as in a Maduro, for instance, and often a cigar marked Claro is peppery and much stronger than a Maduro, on account of the leaf not being as well ripened and matured.

The five "color marks" commonly used are terms from the Spanish. Their meanings are as follows:

# MONGOL PENCIL

The Nation's Standard

YEARS of faithful performance have made Mongol Pencils "The Nation's Standard." Always uniformly good and made for service right down to the ultimate inch. In five perfect degrees—very soft to very hard. At all stationers.

Colorado Maduro	Red Ripe	Strong	Dark (in color)
Maduro	Ripe	Very strong	Very dark (in color)

The other day a lawyer, who always smokes a medium dark cigar, told me that his appreciation of a good smoke is always greatly increased by surrounding it with what he considers the proper rites and ceremonies. He wouldn't think of cutting off the head of a cigar with a knife or of biting it off. Instead, he pierces the head with a toothpick or a sharpened match, and then presses the head lightly between thumb and first finger until it cracks.

While still pressing the head between thumb and finger, he blows through the tuck (the end you light), and thus removes any dust or small particles of tobacco, leaving a clear air passage. He makes a point then of always lighting the cigar with a wooden match, but, after striking the match, waits to let the sulphur burn off before applying the flame to the cigar.

He emphasizes the fact that lighting a cigar properly requires quite a bit of care. He himself makes a practice of holding the flame so that it touches the end of the tuck everywhere, as evenly as possible, without burning higher on one side of the cigar than on another. If it happens that the cigar doesn't draw freely, he pinches the tuck just above the end very lightly until he gets a good draft.

"Rotating a cigar between the fingers as you first draw on it will also help to prevent burning down the side," he said.

"And then what?" I asked.

"Smoke slowly until your cigar is consumed up to the end of the shaped or drawn part. Then you've got clear sailing and will have a cool, even, free-burning cigar."

The lawyer always selects a cigar of perfect size, but he admitted that once, when he was defending a criminal case in a small town, he was unable to get a perfect one and had to smoke a cigar of Londres shape. This, he said, he lit in the same way as his perfect one, only with much more care to see that the broad surface of the open tuck was lighted evenly all over before he began drawing freely.

Since the lawyer seemed to be a deep thinker on this subject, I asked him what he would do if his cigar went out.

"To tell you the truth," he said, "I make a point of seeing that my cigar doesn't go out, for after a second lighting I figure that a cigar is never quite as good. But once I did let a cigar go out and, not having another handy, I re-lit the one I had been smoking; but first I was careful to blow through it so as to remove any of the stale smoke remaining in it!"

IT USED to be a common thing for a man who had received a gift of tobacco from his wife, or from any woman relative or friend, to receive the commiserations of his men friends. To-day, however, jokes on this subject are not likely to be very well founded. The fact is that women who make presents of tobacco are apt to be pretty good judges of it, and the price they pay is generally enough to insure good quality.

It is very seldom now that we hear complaints from men about tobacco given

## THE BELBER SAFE-LOCK

## Is This Why YOU Sometimes Fail?

Elizabeth Towne  
Editor of Nautilus

Do you often conceive brilliant ideas, only to give them no trial at all or to give them up before fairly started?

Do you wonder why you are so ineffectual in these undertakings?

What you lack can be supplied through the use of auto-suggestion, a marvelous success building method now being used by millions in America and Europe.

"Suggestion and Auto-Suggestion" by Dr. Orison Swift Marden will give you the secret that should enable you to change failure to success; and in addition will enable you to build up or safeguard your health and attain happiness as others are doing.

**For 10 Cents** you can get not only this really remarkable booklet on Auto-Suggestion, but a month's trial of NAUTILUS MAGAZINE of New Thought, of which Elizabeth Towne and William E. Towne are editors. Wonderful experience articles a feature of each issue. Send today, and we will include "The Eight Great Rules for Success." **THE ELIZABETH TOWNE CO., Inc., Dept. F-104, Holyoke, Mass.**

## 98 Quality Products that Serve and Save

them by women. Far oftener we hear from such presents as in this instance, which happened the other day: A well-to-do business man went to the head clerk of a Fifth Avenue cigar store and said, "This is a mighty good cigar I'm smoking. Do you want to know how I came by it? It's one out of a box my wife bought. Why don't you ever show cigars of this kind to me when I'm buying?"

By far the greater part of the tobacco produced to-day is used, as I have indicated, for smoking or chewing in various forms. A considerable amount of tobacco, however, is manufactured into snuff. The amount of snuff sold last year amounted to 38,597,950 pounds.

**M**OST of the snuff sold to-day is used for chewing instead of smoking. When moistened it works itself into a "cud," and by some people is preferred to any other form of chewing tobacco because of the various flavors added to the powder, such as spices and salts.

Snuff is made from aged, dark Virginia and full-bodied Kentucky and Tennessee tobacco. The tobacco is first ground and is then allowed to ferment, after which the spices and salts are added for flavoring, depending upon the variety of snuff being made.

One of the older methods of using snuff was known as "booming," but I understand that this term came from "gumming" or "gooming." In "booming" the snuff user employed a little "booming stick" to put the snuff under his lip and between his teeth. This use of snuff seems to have been discontinued everywhere except by a comparatively few negroes in the South.

We have found that the great majority of people who use tobacco are particular both as to how they are served and the conditions in the store where they make their purchases. They appreciate a clerk's knowledge of tobacco quality and brands as well as his courtesy. When a man goes into a store to buy a cigar and sees someone take down a box from a shelf and blow the dust off it, he is very apt to be dissatisfied with any cigar selected from that box. Even if the cigar is an excellent one at a high price, he is almost certain to be displeased with it owing to the impression he got that the cigar had not been kept in clean surroundings.

## A Great Expert Reveals Surprising Facts About Precious Stones and Jewelry

(Continued from page 40)

in the popular idea that the warmth of the human body will keep pearls from losing their luster. Scientists know that this is not true—but the belief has so strong a popular hold that it is almost impossible to dislodge it. Indeed, I recall reading a press dispatch from San Francisco to the effect that a woman was directed by a Superior Court order to wear a ten-thousand-dollar pearl necklace at least thirty

days a year. Evidently the judge was a victim of the prevalent impression.

The fact that a pearl contains two per cent water usually surprises people. They never think of a gem as being partly liquid in composition. But if you were to tell them that the opal is *ten per cent water* they would hardly believe you. This is true, none the less. The opal is one of nature's puzzles. It is composed of nothing but silica and water, and is never found crystallized, like other gems. Instead it occurs free—usually in seams and cavities of rock.

Another curious thing about the opal is that its lovely play of color is really stolen splendor. The gem, strange as it may seem, has no color of its own—but it has a wonderful trick of catching and breaking up rays of light by diffraction. This gives it a changing iridescence that reminds one for all the world of gorgeous tropical plumage.

Opals tend to dry out and lose their beauty in the course of time. Even the finest specimens of Hungarian opals show some loss of life within a century, and Mexican opals lose their color and are filled with flaws within a few years. The hydrophane is a variety of opal. Naturally it is a light-colored opaque gem of no particular beauty, but once you immerse it in water it takes on a lovely transparency.

**M**OST gems, however, are not susceptible to the influences I have mentioned as marring the opal, pearl, and turquoise. The diamond, for instance, cannot be dimmed by chemical contact. I do not mean by this that the king of gems—the hardest substance known to man—cannot be injured if you take too many liberties with it. Diamonds can be pulverized in a steel mortar with a steel pestle and I have heard of a man who split and spoiled a fine gem by striking it with a large hammer, in a misguided attempt to find out whether it was real. No less unfortunate was the lot of another man, who accidentally dropped his two-carat ring into the fire and in his excitement threw water in the stove to put the fire out. His diamond was fractured, too, when the water struck the hot gem. Indeed, you can burn a diamond up if you kindle a hot enough fire. The stories you read from time to time about diamonds being consumed when left on bodies consigned to the crematory are probably true, as the temperature during cremation is close to two thousand degrees, which is hot enough to consume a diamond. Another strange fact about the diamond—although it is so hard that only other diamonds and diamond dust can be used to cut and polish it—is that sometimes it has its sharp facets slightly rounded by constant contact, over a very long period of time, with dress fabrics.

There is probably more sentiment about jewelry than about any other kind of personal property. I remember how one man brought me his baby's first tooth and asked to have it mounted for a watch charm. Many women wear locket in which are preserved strands of hair from heads long since laid to rest. And any safe deposit man will tell of pieces of jewelry—sometimes of little value—on which storage charges are paid for year after year.

Back in the early eighties I was going

## “Topkis costs One Dollar —but I’d pay twice that”

“**T**OPKIS certainly gives me my money’s worth—and then some! I never got so much value for a dollar before. Dollar Topkis more than repays its cost every minute I’m wearing it.

“On top of perfect fit Dollar Topkis gives me better fabric and longer wear than lots of underwear that cost me double.

“It’s good to know that when I buy Topkis size 38 I get full 38 measurement. I can’t try on underwear in the shop, like a hat or shoes.”

Men everywhere say Dollar

Topkis is the biggest underwear value. Easy, roomy fit. Extra long, extra wide legs. Big armholes. Full cut chest and waist.

Best nainsook and other high-grade fabrics—pre-shrunk. Full size guaranteed.

No mistake, the Topkis Men’s Athletic Union Suit is a big dollar’s worth. No good dealer will ask more—but they know it’s worth more and will say so.

Men’s Shirts and Drawers, 75c a garment; Boys’ Union Suits, Girls’ Bloomer Union Suits, and Children’s Waist Union Suits, 75c.

Free booklet tells what you ought to know about underwear. Write for it.

## A man who lives on paper

Henry B. Rankin, of Springfield, Illinois, has been a shut-in for thirty-nine years

READ what he says about the big things in his life:

MY DEAR SIR:

I write this on passing my eighty-fifth birthday, and the thirty-ninth year of my shut-in life. Such a life as mine is one largely lived on paper. Take paper out of my life and there would be little left worth telling. One of the big things in my paper life has been Old Hampshire Bond.

A shut-in's correspondence is much larger than if he were in active life. He's always on the writing job and takes no vacations. I have lived for thirty-nine years on paper pages and along the wires. Life continues worth living when lived largely by wire and on Old Hampshire Bond. Those return messages that come back to me satisfy best if they come waterlined, "Old Hampshire Bond." So all is O. K. both coming and going.

It takes both script and typing beautifully. If there is a trip-up in the spelling, or a start out the wrong way with a sentence, Old Hampshire Bond kindly receives the eraser's gentle touch and leaves no blur or blotch, and the secret of the blunder is so well kept that no show of it appears on the fair face of good Old Hampshire Bond.

Fraternally yours,

(Signed) HENRY B. RANKIN,  
510 South Second Street,  
Springfield, Illinois.

People who like fine things prefer Old Hampshire Bond "both coming and going." Its use implies, on the one hand, a discriminating taste, and on the other, a desire to please.

**Old Hampshire Bond**

*A generous sample of Old Hampshire Bond will be sent you if you will write us on your business letterhead.*

for Social Correspondence.

over a miscellaneous assortment of old-fashioned jewelry which I had been requested by a New York pawnbroker to melt down for the fine gold it contained. Presently I came across a handsomely made and expensive gold locket. Inside, under a cracked glass plate, was a miniature photograph of a middle-aged, stern-looking man, with luxuriant side-whiskers. He was dressed in the severe business costume of the early sixties. I inserted my penknife under the picture and lifted it out. Underneath, I found another photograph of the same size. This one, however, was the likeness of a handsome young officer attired in Federal blue. His hair was dark and wavy, and about his well-formed mouth there lurked the suggestion of an engaging smile.

Idly I turned over the picture of the side-whiskered business man. On its back was written these words: "My husband." Then I glanced at the back of the young soldier's likeness. On it was written: "The man I love. Died in battle—1863."

IN BY-GONE generations almost every precious stone was freighted with superstitions in which people of even the greatest intelligence believed implicitly. The ruby was an amulet against sadness. The onyx was supposed to produce nightmares. Jasper would save its wearer from drowning. The topaz was vested with the power of warding off sudden death. Amber was supposed to be a preventive of intoxication—and so on through the whole gamut of gems. Most of these superstitions have long since faded away, except among the very ignorant. Perhaps the one that persisted longest was the belief in the malevolent powers of the opal.

One remnant of superstition that still has considerable vogue is a belief in the "good luck" of birthstones. Various lists of the stone peculiar to each month of the year have been given from time to time in the last few centuries. The one most generally accepted to-day is as follows:

January	Garnet
February	Amethyst
March	Bloodstone
April	Sapphire
May	Emerald
June	Agate
July	Ruby
August	Sardonyx
September	Chrysolite
October	Opal
November	Topaz
December	Turquoise

The beneficent properties of each month's gem have also been perpetuated in verse. Here is one for January:

By those in January born  
No gem save garnet should be worn;  
It will insure you constancy,  
True friendship, and fidelity.

If you are interested to learn the verses for the other months your own jeweler or a good reference book will furnish them to you.

Many well-known people have been subject to a fascination for gems that persisted throughout their lifetime. I remember that Henry Ward Beecher, the famous clergyman, although he wore no jewelry, always carried two or three expensive stones loose in his pocket, from which he used frequently to take them

and admire them. "Diamond Jim" Brady, the New York financier, who died a few years ago, was so under the spell of the gem from which he gained his sobriquet that he never appeared in evening dress without a dazzling display. James Fiske, Jr., one of the striking figures of another generation, habitually wore a shirt stud worth twenty-five thousand dollars.

Diamonds are to-day by far the most popular stone. This is especially true in the United States, where it is said that one half of the world's supply is owned. The pearl comes next in popularity; then the sapphire and the emerald. Two or three decades ago there was a steady demand for turquoises, but this has now dwindled to very small proportions.

Every woman has an inborn love of gems and jewelry. Yet the average woman seldom buys an expensive piece of jewelry for herself. She prefers to receive it from husband or sweetheart—something which gives it an added sentimental significance. During the holiday season, when nearly one third of jewelry sales are made, the average jeweler's shop is pretty well filled all day with male customers.

Many people buy diamonds for investment purposes. Judging from the way their price has constantly increased during my lifetime, I should say that this is an act of excellent judgment. The fact that a good diamond can always be pawned at pretty close to its face value leads many people in seasonal professions to invest in them during "flush" times. Then, when their purses are running low, they have something to fall back on. Many a stranded man or woman has been relieved from temporary embarrassment by this expedient.

Frequently I am asked if the diamond is the *only* stone that can be used in an engagement ring. I do not know that there is an inflexible rule covering this, but the fact remains that almost invariably it is selected by people who can afford it. Furthermore, the single or *solitaire* diamond is purchased ninety-nine times out of one hundred. Occasionally the pearl is chosen, and I have seen a few engagement rings in which diamonds were set with sapphires, emeralds, and rubies.

THE wedding ring—the "circle without end" that symbolizes eternal constancy—is restricted by custom to plain or burnished gold and recently platinum. I have found many people curious as to why this ring is always worn on the third finger of the left hand. According to the best authorities, the left hand was chosen to indicate the wife's subjection to the husband and the third finger was picked because it was believed to be the only one with a vein leading directly to the heart.

In recent years platinum wedding and engagement rings have largely supplanted gold bands among folks who can afford to buy them. To-day many women, anxious to keep pace with fashion, are having their gold wedding rings covered with platinum. I have never known a man to wear a platinum wedding ring, however. Such husbands as still cling to this fading custom also cling to the plain gold band.

A half century ago, when I entered this

# Packer's *New* metal soap box makes shampooing easy

**E**ACH cake of Packer's Tar Soap now comes to you in a metal soap box—delightful in its convenience. You may now take added pleasure in giving the safe and reliable care which develops the health and beauty of your hair.

Packer's gives you these two essential results of proper shampooing:

**FIRST:** By its thorough cleansing, Packer's fluffs up your hair prettily in charming, individual ways and makes it soft and lustrous.

**SECOND:** Packer's, by virtue of its distinctive ingredients, does more than merely cleanse—it

*promotes your hair's future health.* It stimulates the scalp, and promotes proper nourishment of the hair roots.

While Packer's washes out any *excessive* oiliness, it leaves undisturbed the *normal* flow of oil which insures attractive hair; which guards against dry and brittle hair.

Physicians recommend pine tar as a healthful beneficial shampoo ingredient. The creamy Packer lather will bring out the natural glow and sheen of your hair—no matter what its color. We especially recommend Packer's to preserve the golden gleam of blond hair.

business, the use of platinum in jewelry was unknown. Practically the world's entire supply of the metal was in a rather generous deposit in the Ural Mountains in Russia. In this particular locality platinum was so plentiful that it had very little value. Five dollars would buy an ounce of it in this country, and it was considerably cheaper than that in Russia. The Russian Government tried the experiment of coining ruble pieces from it, but the people turned a cold shoulder to the experiment. The metal was put to all sorts of uses—even making buttons and umbrella handles. And pots and pans in the same way that copper is used to day.

About 1897 the possibilities of platinum in the manufacture of jewelry were first realized. Then the vogue for it gradually got under way. Jewelry makers turned to the Ural Mountains deposit. But this had about given out, and nowhere else in the world could the much-sought metal be found in any considerable quantities. Then a rapid market developed for the buttons, umbrella handles, knife handles, and utensils, which the Russians had made from platinum. When the price of platinum was getting rather high I remember asking my foreman, who was a Russian, to write to his relatives in the old country and see if he could not obtain from them certain platinum articles which we could convert to manufacturing purposes. The answer came back that "the Germans were here—and there isn't a stove pipe of it left." This was my first intimation that the precious metal had ever been put to quite so prosaic a use. To-day an ounce of platinum costs between one hundred dollars and one hundred and twenty-five dollars—for the Ural Mountains deposits to this date have never been replaced.

TO-DAY the United States is the banner jewelry market of the world; and you cannot buy finer and better mounted stones anywhere in the world. Despite this fact, many Americans in their globe-trotting are continually looking for "bargains" in gems. I know of one man who took a leisurely trip around the world not long ago, picking up jewels and uncut stones here and there in foreign cities. He spent more than one thousand dollars for his purchases. On returning home he found, to his utter chagrin, that he could have bought the whole mediocre lot in America for about one hundred dollars.

One of his worst losses was sustained in India, where two "sapphires," just "smuggled from the mines," were offered him for five hundred dollars apiece. To show that they were "genuine" the native salesman ground them into the floor with his heel, declaring that they would be crushed if they were spurious. But the man decided to demonstrate his Yankee shrewdness by an appearance of indifference. After a long period of bargaining he obtained the two stones for one hundred and twenty dollars. He was very proud of his purchases until he showed them to a local jeweler—who pronounced them artificial gems worth hardly one dollar apiece.

In the past few years, when so many European royal houses have gone by the board, about every foreign gem market has a select collection of "crown jewels" for the American tourist. It is wise for the American traveler to remember that,

although many folks of high lineage have been forced to sell their gems, and other stones have been seized and stolen, yet all those of real value have passed into the hands of legitimate merchants.

With the development of America as a great gem market—and the coincident increase in the customs duties on imported gems—the practice of smuggling has taken on greater proportions. Custom officials are constantly unearthing new and clever schemes. I heard recently, for example, of a man who was detected in the act of bringing in ten thousand dollars' worth of diamonds which he had concealed in the barrels of two fountain pens and in a tube of tooth paste.

ONE of the cleverest schemes of which I have ever learned was devised by a trio of native sharpsters, very many years ago. One man, taking passage from a foreign port, would bring with him a large number of diamonds, and leave them in his stateroom on the boat. A second member of the gang would arrange for an eastbound passage on the same steamer and, with the assistance of a friendly clerk in the steamship office, be assigned to the same stateroom. When he went on board he would wrap the diamonds up in an inconspicuous package and hand it to the third member of the trio, a woman who accompanied him to "see him off." When the gong sounded for friends and relatives to go ashore, she would depart unquestioned, with the jewels. It is said that this particular scheme was unearthed when the woman fainted on the dock and was taken to the hospital. There the gems were found in her possession.

The story is told of a certain inveterate gem smuggler who, after buying considerable quantities of diamonds abroad, received word that he was being shadowed and that the customs officials were lying in wait for him. So he sent an anonymous letter to the American customs officials, in which he was supposed to be betrayed by a confederate. This letter declared that he was trying to smuggle in a large lot of diamonds; and it told just where they could be found in a certain trunk. Upon leaving the boat, the traveler was detained and a search was made of the trunk. Sure enough the stones were found in the secret hiding place. They were seized, but the man was allowed to go—since it was the diamonds the officials were after. Later, to their great chagrin, they discovered that the stones in their possession were paste. The smuggler had walked off with the real diamonds concealed under a porous plaster on his back. Following his arrest some time later, on another charge, the story came out.

The greatest diamond romance that I know of, however, is a matter of historical record. I refer to the discovery of the tremendous diamond deposits in South Africa. Perhaps a brief recital of it will not be amiss. When I picked up a newspaper fifty-four years ago and read that diamonds had been discovered in the southern reaches of the "Dark Continent," I never dreamed that the information marked the opening of nature's most astounding storehouse—a storehouse that has since produced nine tenths of the world's diamond supply. Beside this modern Golconda, the fabled treasures of the caverns of Ali Baba and his

*The American Tobacco Co.*  
INCORPORATED

Forty Thieves sink into insignificance. As is often the case with happenings of great import, the discovery was made quite by accident.

The children of Daniel Jacobs, a poor South African farmer, found a bright-colored pebble while playing on a river bank near their father's home. The stone aroused quite a bit of interest and comment, but no one dreamed of attaching special value to it. Eventually the sparkling, oily "pebble" was given to a neighbor, who entrusted it to a trader traveling toward Hopetown, who offered to find out if it had any value. At Hopetown and Colesburg, several merchants ridiculed the idea that it might be a precious stone, although one of them did venture an opinion that it *might* be a topaz.

The trader, rather disgusted, was about to toss away a diamond that later created a furor at the Paris Exposition, much as you or I would pitch a pebble to the opposite bank of a creek. Had he done so, one may well believe that the discovery of South African diamonds might have been delayed for years. A civil commissioner at Colesburg, however, asked to see the stone, and examined it carefully. He was the first man to be struck with the idea that it might possibly be a diamond. That he was not particularly impressed with this possibility, however, is shown by the fact that, to save higher postage, he sent the "pebble" to the leading mineralogist of South Africa in an unsealed envelope. The mineralogist declared at once that it was a 21 1/2-carat diamond of fine quality, worth several thousand dollars.

The news, of course, attracted considerable public attention and set many people to searching nearby streams. The next important find was made by a simple Griqua shepherd boy, while he was tending his sheep on the Zandfontein farm near the Orange River. The amazement of the poverty-stricken native knew no bounds when he received for his find five hundred sheep, ten oxen, and a horse—possessions that represented untold wealth and power in his community. As a matter of fact, this payment was a mere pittance of the stone's real value. Its purchaser sold it for \$55,000, and the famous "Star of the South," as it was called, eventually became the property of Earl Dudley at a price of \$125,000.

**IT WAS** not until 1869, however, that systematic diamond mining was started in this vicinity. At intervals new discoveries had been made. One diamond weighing fifty carats was found near the settlement of Fauresmith, in the Orange Free State. In July, 1871, miners digging a water well at Bloemfontein uncovered a magnificent 87-carat diamond. This place was called New Rush or Colesburg Kopje, the present location of Kimberly, the hub of the diamond mining industry.

When you look at a diamond it is hard to reconcile its flashing beauty with the commonplace fact that it is composed of the same material as lampblack, the lead of your pencil, or the troublesome substance that shows up the mirror of your automobile. Yet it is nothing but carbon—pure carbon, crystallized by a wonderful process of nature. Many other minerals are found in mass, but diamonds are always discovered in single crystals among deposits of nature, crumpling

rock. Most often they are in the vents or pipes of ancient volcanoes, and show signs of having been hurled out of the bowels of the earth by the force of subterranean explosions. In its natural state, the diamond is not a thing of beauty. If you should happen to pick one up, you would be likely to cast it away after a casual glance. All its wonderful play of color comes with the cutting and polishing.

In mining diamonds, millions of pounds of fairly rich diamond ground must be handled through the mill to net a pound avoirdupois of rough diamonds. A stone weighing 2½ carats in the rough will often be required to make a one-carat finished stone, the average loss in cutting and polishing being about sixty per cent. But the diamond dust that falls from the diamond-cutter's wheel is caught and used in dressing other dull stones in sparkling robes.

Frequently people have attempted to describe a diamond to me and then find out what I think it ought to be worth. They might as well ask me when the next thunderstorm is going to occur. There are so many things that go to make up its value that it is impossible to put a price on an unseen diamond. One has to consider its make, shape, color, degree of perfection, brilliancy, proportion, and cut.

You must remember that quality, not size, governs the value of diamonds. You may be able to buy a fine stone at a price ranging from \$600 to \$800 a carat. Exceptional stones are worth much more. Of two stones, both flawless and the same size, one may be worth \$800, and the other—perhaps one of the fine, clean steel-blue stones, so dear to the heart of the true diamond lover—may sell for \$5,000.

**THE** best example of a flawless blue-white diamond, and in many respects the most remarkable diamond in existence, is the "Cullinan"—found near Pretoria, Transvaal, January 26th, 1905, and presented to the English king. In its original state it weighed over three thousand carats or more than one and one-third pounds and is estimated to be worth from two and one-half to five million dollars. Furthermore, it was determined that this amazing find was merely a fragment. It had been broken off from a mother stone—presumably by the same force that erupted it from the earth's inner crust. It was sent to Amsterdam and cut into nine separate stones, ninety-six brilliants, and a quantity of unpolished ends. All of these stones, from the smallest (less than five carats) to the largest (516½ carats), have been added to the crown jewels of England. The larger stones greatly overshadow even such famous gems as the "Kohinoor" and the "Jubilee" in size, brilliancy, and perfection of color.

In discussing the changing vogues in jewelry, I neglected to mention the tremendous increase in the popularity of the pearl—the genuine, the artificial, and the imitation. Nowadays, nearly every woman, from the reigning society beauty to the girl in most moderate circumstances, has a necklace of one kind or another. The so-called imitation and artificial pearls range from the cheap substitute that would deceive no one to the expensive counterfeit that would fool even an expert, at long range.

One of the most common imitations is the "Roman pearl." These are made by

## Vitralite

*The Long-Life Enamel*

If you were E. M. Statler, and were building your greatest hotel, you probably would use Vitralite, *the Long-Life Enamel*, just as he did. Why don't you get the benefit of that enduring, porcelain-like surface of Vitralite, on the woodwork and furniture in your home? Available in white and several exquisite authoritative tints.

Pratt & Lambert Varnish Products are used by painters, specified by architects and sold by paint and hardware dealers.

*Write for Color Card, Sample Panel finished with Vitralite, and Names of Local Dealers.*

## Out of focus!

### AnSCO equipment prevents it

How disappointing to get a print like the above! It would not have happened with the No. 1 Folding AnSCO, a fixed-focus camera that can be focused. An exclusive AnSCO feature would have automatically set the lens in the fixed-focus position and prevented it.

#### No. 1 Folding ANSCO

is an ideal all 'round camera. The beginner can get fine results with the fixed-focus lock. The expert can regulate his focus exactly. And this is only one of its many advantages.

This strikingly handsome camera has won a deservedly wide popularity with both inexperienced and experienced camera users. It is modestly priced and an especially convenient size. Ask your dealer about it. Let AnSCO do your remembering.

No. 1 Folding AnSCO, AnSCO F. 7.5 Anastigmat Lens.  $2\frac{1}{4} \times 3\frac{1}{4}$ , price \$18.00. Others this size \$12.00 to \$70.00.

With any other camera it means better pictures than you are in the habit of getting. Its wider range of exposure makes the AnSCO Speedex Film the best on the market for all conditions of light. Look for the film in the red box with the yellow band. Ask for it.

#### Of course, AnSCO Speedex Film

With an AnSCO camera, AnSCO film insures the maximum in good results.

The red box with the yellow band

giving the inner lining of round glass beads a coating of a lustrous preparation made from the silvery scales of the bleak, a fish that is found in northern waters, and filling them with white wax. Other makers of imitation pearls achieve a soft, pearly sheen by the careful use of fluorine acid on solid opaque glass spheres.

The formation of the real pearl within the shells of certain oysters is one of the miracles of nature. Some irritating substance—such as a grain of sand or a small parasite—finds its way inside the oyster and irritates it in about the same way that a grain of dust annoys you when it blows into your eye. In its efforts to get rid of the invader, the oyster covers it with layer after layer of a nacreous liquid that gradually hardens. Thus the pearl is born.

In Japan the culture of pearls, in many respects equal to the natural product, has become a recognized industry. Instead of waiting for the foreign body to enter the shell, skilled workers take the oyster from its bed and insert a sphere of mother-of-pearl. Then they put it back and await developments. The death rate among "doctored" oysters is high, and the practice requires a high degree of skill. From each of those that live, however, a more or less perfect pearl is pretty sure to be obtained.

All of us are familiar with the expressions "pearl-white" and "pearly teeth." Strictly speaking, both are misnomers; for natural pearls are found in more than one hundred different shades—white, pink, yellow, purple, red, salmon, green, brown, blue, and black among others. This is one of the reasons for the tremendously high price of a perfectly matched pearl necklace. Sometimes it takes a dealer many years to get together enough pearls of the proper size and shade to make a necklace.

THE Indian Ocean, the Persian Gulf, and the waters of Australia and some of the South Sea Islands furnish the major part of the world's supply of pearls. Here the oysters are brought up by native divers, who have trained themselves to stay under water for an unbelievable length of time. Of course only a small fraction of the oysters brought to the surface are found to contain the much sought gem.

There is a rather profitable industry in the pearl fisheries of the Mississippi and other American rivers, but the products of the oysters gathered here are neither very valuable nor very numerous, compared with those in the other fields I have mentioned. A few years ago the waters of Lower California were worked with gratifying results.

From time to time stories are published in the newspapers of valuable pearls being found in the edible oysters of the United States. These stories are largely myths. Sometimes pearl-like granules, dull white or purple in color, are removed from these oysters, but professional shuckers have opened hundreds of bushels without discovering a single gem of more than nominal value. In spite of this the hope of finding a valuable pearl in oysters still springs eternal in the human breast. I have been visited again and again by the excited bearers of pearly pellets which they rescued from an impending stew. I am always sorry to have to tell them that their find has no cash value.

# Examine the mouth glands— physicians advise when teeth mysteriously decay

## The medical profession adopts a new point of view on tooth decay

**R**ECENT experiments show that the six little glands in the mouth are slowly drying up. This, according to scientists, is the real cause of tooth decay.

We have known for years that the acids which are constantly forming in our mouths slowly eat their way into the enamel unless we can counteract their effect.

Now scientists declare that the fluids from the salivary glands would permanently check the acids—if these glands could be made to work normally.

### A famous doctor discovered how to make these glands flow normally

Pebeco Tooth Paste was first prepared by a famous specialist for this very purpose.

In studying certain troublesome mouth conditions some years ago, he discovered a substance which, without injuring or exhausting the mouth glands, restored their natural continuous flow. It not only kept their mouth glands active but it had also a tonic effect on the tonsils and the tiny gland cells in the back of the throat.

He found that the patients who used it experienced great relief and that the general condition of their mouths improved. Also it was unmistakably shown that as their glands returned to a normal condition tooth decay was checked.

At first the patients applied this substance directly to the gums.

Then realizing the importance of his discovery, the physician allowed a

The Sialometer—a new instrument physicians use to study the glands of the mouth

A small air pump<sup>1</sup> sucks the body of the instrument<sup>2</sup> tightly against the inside of the cheek, directly over the opening of the gland. The saliva passes from this chamber through a silver tube<sup>3</sup> to a measuring flask<sup>4</sup>. The instrument can be worn while talking and eating. (See Journal of Experimental Psychology, Vol. 1, p. 462.)

great chemical house to develop the now famous Pebeco Tooth Paste. Like so many other scientists, he received no material reward for his discovery.

### Why these glands no longer flow naturally

Experiments with a new instrument called the sialometer have shown the reason why our salivary glands no longer flow naturally.

Our diet today is so soft and easily swallowed compared to the food Nature intended us to eat that chewing has become almost unnecessary. And it is this chewing that makes the glands work. The sialometer shows they are 20 times more active when we chew.

### And then the acids destroy the enamel

When the glands slow down the acids of the mouth begin to eat their way into the enamel. Even though you brush your teeth several times a day these acids are constantly forming. Small particles of food are left, enough to feed hundreds of acid-forming bacteria.

Nature intended the fluids from the salivary glands to wash away these acids as fast as they form.

Photographed by Alfred Cheney Johnston

Strong white teeth are the result of healthy active mouth glands. The regular use of Pebeco keeps your mouth glands in a normal condition and your teeth sound.

### How Pebeco works

Pebeco has a peculiar effect upon the salivary glands. The moment it enters the mouth it causes the glands to flow copiously. This continues for a long time. Thus the teeth are cleaned and the conditions which Nature intended are established. The mouth cleans itself automatically. As fast as the acids form—the saliva washes them away.

Pebeco is neither acid nor alkaline. It does not attempt to change the quality of the saliva; that is regulated by Nature. It merely increases the flow to the normal amount.

Take home a tube tonight and note its invigorating taste. It will keep the glands of your mouth active and your teeth sound and healthy. 50c at all druggists. Manufactured only by Lehn & Fink, Inc.

### Send for test for your mouth glands and a ten-day tube of Pebeco

Send us ten cents today and we will send you the material for testing whether your mouth glands are active enough to protect your teeth. We will include a junior size tube of Pebeco and our booklet, "How the Glands Protect the Teeth." Lehn & Fink, Inc., Dept. F-5, 635 Greenwich Street, New York.

Investigations among Indians on the Northwestern Coast showed that less than 4 out of a hundred ever had a decayed tooth. Today 98 civilized people out of every hundred suffer with tooth decay. Because of our soft cooked foods our glands no longer protect our teeth.

## When "Good Night" takes on new meaning

Put on Faultless Pajamas or Nightshirts and "good night" takes on new meaning. Because Faultless Nightwear is tailored for fit and comfort—there is pure, unadulterated sleep in every stitch!

Faultless Nightwear is cut to conform to the lines of the body. At the shoulders, elbows, hips and knees, where the most room is needed, you will find Faultless just a bit more roomy, just a bit more comfortable. The sleeves and trousers are cut full length. The buttons, because of a distinctive Faultless way of reinforcing, keep their place opposite their button-holes.

Made of exquisite durable fabrics, carefully chosen, Faultless Nightwear is for those men who respect and demand style in every garment—whether for street wear or home wear and who love, most of all, sound, comfortable sleep and luxurious lounging. There is a Faultless Garment to fit any pocketbook and any stature. Ask for Faultless Nightwear.

The Faultless SleepCoat is something new—something original. A pantsless pajama, tailored like a coat. Exquisite in finish and fabric.

duced. That is a fundamental factor in every business.

"Our worst competitors to-day are the manufacturers who don't know what it costs to produce their goods. You can understand why this is true. They try to undersell us, because they actually don't know that they will be losing money at the prices they ask. Most of them eventually go to the wall.

"The situation in the nineties was far worse in this respect, and in many others, than it is now. The Washington Mills manufactured woolen goods, and the woolen industry was in terrible shape. Dozens of small concerns were struggling along, waging a bitter fight among themselves for materials and labor and markets. A good many of them were almost put out of business by the Gorman-Wilson tariff bill. The whole industry was demoralized."

In this emergency, Wood came forward, in 1899, with a proposal to merge a number of these unstable concerns into one large company, thus reducing costs and working together, instead of trying to cut one another's throats. Wood was not only the man who proposed the plan, he was, according to everyone's testimony, the *only* man who could have carried it through.

I WANT to stop here to quote something Mr. Wood said to me when we were discussing young men and their struggle to succeed. He is, by the way, a remarkably interesting talker. Very direct, keen, and quick, he puts an idea in an epigrammatic nutshell. His sense of humor is constantly flashing out. He is not a man of loud laughter—the kind that is given to guffaws—but his eyes have the gift of smiling. The dominating impression he gives is one of tremendous power; but there is also a constant play of humor and of imagination.

Well, we were talking of young men, and Mr. Wood said in his decisive way: "You can't keep an able man down! He is bound to rise. He does it whether he deliberately determines to, or not. There he is; and you can't escape the fact that he is bigger than the men around him. You take him because you need him.

"A board of directors meets for a conference. The president, sitting at the head of the table, presents a plan. He thinks he has worked out the very best one possible; and he goes on to lay it before his directors, building it up, detail by detail, until the whole structure is before them. And then, perhaps, someone sitting away down at the other end of the table, puts a question—and that question knocks out one of the pieces of the plan. He goes on, asking questions and presenting facts, knocking out the props one by one, until the plan totters and falls.

"What are you going to do? It isn't a question of whether you want to put that man forward; or even whether he wants to put himself forward. You know that he has ability. And every business head, unless he is a fool, knows that he *needs* men with ability. So you can't keep an able man down."

I quote this here because it applies to the man who said it. His insatiable curiosity about costs had made him better informed on that subject than anyone else in the industry. Because of this, he be-

came treasurer of the Washington Mills. He had only been in cotton mills before. Now he was plunged into the woolen industry—and he found conditions even worse there. The story of how he dug and delved for facts would make an epic of business. It is told of him that he even measured the drops of oil, used in certain processes, in his search for a complete understanding of the costs of manufacturing.

IT WAS plain to him that a mill could not go on running if it did not *pay*. He set to work to make the Washington Mills pay; and he succeeded. With this record behind him, he proposed the consolidation of seventeen mills, most of which were threatened with failure. Eight of them responded. Frederick Ayer, whose daughter Mr. Wood married, was the first president of the new company, but he was soon succeeded by Wood himself: "You can't keep an able man down."

By 1910, the American Woolen Company led the industry, and William M. Wood was recognized as a business genius. Lawrence, Massachusetts, was the center of the company's activities. Thousands of the mill operatives lived there. They were of a score of different nationalities, many of them not even speaking English. During that year they joined in one of the worst strikes New England has ever experienced. Before it came to an end, William M. Wood had been pilloried before the public as a sort of monster. To leave out this fact in telling his story would be to give only a half-picture of him. I wanted to hear his explanation, so I said:

"Mr. Wood, you have had the reputation of being hard on labor, an employer who had no human feeling toward his employees. How about it?"

"How about it?" he repeated. Then, very seriously, he went on, "Perhaps my side of it is not of great importance, but here is the truth: I have *always* sympathized with labor. I have always felt that conditions in an industry were not as they should be if the employees in that industry were compelled to put their children to work in order that they might live.

"That was the way I felt years ago, when I had my first position in a woolen mill. But the conditions were there! I had not *made* them, but I had to *meet* them. The first step was to improve them in the one mill with which I was connected; and the only means toward that end was to make the business sound.

"If you went aboard a ship that was leaking, out of repair, in imminent danger of sinking, your first duty to the people aboard that vessel would be to put it in shape to *keep afloat*. Isn't that true? Their comfort and their happiness would have to wait until you had made the ship capable of at least carrying them in safety.

"But in the case of a great industry, *one* concern is not the ship. The industry itself is that. And I found that one mill could not be run without being affected by the conditions prevailing in the whole industry. The American Woolen Company was formed in order to make the industry—the ship, as I said before—capable of staying afloat.

"Then the I. W. W. came to Lawrence. Up to that time we had not had them in New England. They began to work

## Loss of sleep cost Napoleon his empire

History tells us that Napoleon, exhausted from wakefulness, gave contradictory orders on the afternoon of his Waterloo.

You, too, may be and doubtless are, imperiling your success by lack of sleep—in quality if not in hours. And sooner or later you will realize that the kind of sleep you get is more important than the *time* you spend in bed.

If now you do not awake clear of mind and with boundless physical energy, *you can*. There is an easy and practical way—buy better sleep equipment.

Spare half an hour today to visit your furniture dealer and get acquainted with the broad range of Simmons mattresses and springs he offers in types and at prices that satisfy any taste or purse.

Compare what you are using with their lasting quality and sleep-inducing comfort. Study and test *The Purple Label* mattress carefully—the finest and most luxurious mattress made.

Note the difference and decide whether health, vigor and personal success are not worth the cost of Simmons sleep comfort.

# SIMMONS

BUILT FOR SLEEP

among the mill operatives. And the politicians, thinking that here was a chance to ingratiate themselves with thousands of workmen—which they thought meant thousands of votes—took sides with the I. W. W. walking delegates. The newspapers that were controlled by these politicians attacked me with a bitterness beyond description. I was the most execrated man in America. From the Atlantic to the Pacific, I was held up to the public as an object of hatred.

**T**HEN the politicians discovered that very few of the strikers were voters, but were foreigners who never had become naturalized. That seemed to change the point of view, and the papers began to print corrections of the reports they had previously published.

"But, so far as I was concerned, this change of attitude came too late. The attacks on me had been printed all over the country. People had read them with avidity. The corrections were in some obscure paragraph which few persons even noticed. In the public mind, I had been accused and found guilty.

"What could I do? Perhaps, I don't know, perhaps I could have met the situation differently. But a man is what he is. And I was a man whose chief concern was to make the industry sound and stable. That seemed to me then—and it seems to me now—the first requisite toward better conditions for the people employed in the industry.

"Then my son, Billy, graduated from Harvard. You must not think I am prejudiced, being his father. Everyone will say the same: that he had a remarkably keen mind and that he had also a very lovable character. In college he had studied social and economic conditions. He had got his ideas literally in another school from the one in which I had been trained. He saw possibilities, which I, in the grilling fight I had been making to stabilize the industry, had not seen.

"Dad," he said to me, "a business is something more than buying and selling. We can't think only of mills. We've got to think of the men and women in the mills."

"I had been thinking of those men and women, but in different terms from those in which my son thought. My ideas, I knew, were fundamental ones. I was willing and glad to let him show that his were fundamental too. My son had the idea of introducing a plan for the payment of insurance, in case of the death of an operative. We put it into effect; also a system of sick benefits. I believe we have paid almost two million dollars for these purposes during the past few years.

"He introduced other ideas. Some were good; some"—he shook his head smilingly—"were not so good. We have built a great number of houses which are rented, or sold, to our employees at a lower figure than they can be had from other sources. From the window here you can see Shawsheen Village, which the company has built for its employees.

"My son was the prime mover in these and other features of the company's relations to its employees. We have a Department of Labor, which he was instrumental in organizing. Perhaps you know that he was killed last summer in an automobile accident. . . . You have read that

the good that men do lives after them. I think my son has left a monument of good that will live a long, long time.

"But—" he looked up with a return of his quizzical smile—"I don't want you to think I abandon my belief that these things *would not have been possible* in an industry that was not sound and stable. To achieve this soundness and stability has been the main object I have worked for. And perhaps, in doing what I have been able to do toward it, I may have accomplished something as a philanthropist myself, although I don't pose as one. I have thought of the dollars and cents, because they *had* to be thought of; and, also, I admit, because that is where my ability, such as it is, lies.

"We have fifty-nine mills now, with about thirty-five thousand employees at the present time. That means that I, as the president of the company, cannot possibly attend to every detail of the organization. Someone asked me recently how I remembered all the facts I should know to conduct the business. I don't *try* to remember a mass of details. But I do know *where to get them* when I need them.

"What would be the use of my memorizing all the figures in our annual report for last year, for instance? I know the essential facts; and I can get the annual report in five seconds if I want to look up minor details.

"As for looking ahead, it's a clever man that can see more than twenty-four hours ahead with any real assurance of being right. The only thing you can do is to watch the signs as they come, and then use the best judgment you possess."

**B**UT you, of course, have constantly to make very important decisions," I said. "And I am told that you make them very quickly."

"Every executive has to do that," was the reply. "But because a decision seems to be made quickly, it does not follow that it is made *impulsively*. You might take the same question to two men; and one would give you an immediate answer, while the other would want time to think it over. That doesn't prove that the latter will give you a *better* answer. It may mean simply that his brain does not work as quickly as the first man's.

"Decisiveness is more or less a mental habit, anyway. Take the common matter of answering letters. I remember going, years ago, with my father-in-law, Mr. Ayer, to call on Mr. Henry Saltonstall, of the Pacific Mills. He was studying a mill report, sitting at a desk that was absolutely bare, except for a large blotter, a pen, and an ink well.

"When we came out of the office, Mr. Ayer said to me, 'William, if you can ever show me a desk as clean as that man's was, I'll be ready to believe that you are a master of your business.'"

"Well," laughed Wood, "I went back to my office and started to clean up everything that was on my desk—and there was such an accumulation of papers that I hardly knew where to begin. Before night I had disposed of the whole batch. Having cleaned my own house, I was in a position to demand that the men around me clean theirs. We have continued to observe that rule pretty faithfully."

"What is the commonest fault of young men in business?" I asked.

"Remissness," said Mr. Wood, after a moment's reflection; "lack of absolute dependability. That is the commonest failing everywhere; in business, in the household, in every relation in life. It is a great satisfaction to find an employee to whom you can assign a certain duty and then dismiss it from your mind, knowing that it will be done and done *right*. An immense amount of time is wasted in following up things, to see that they are carried through properly. An absolutely dependable man will never have to hunt a job. He is too valuable."

"You spoke of not wanting an eight-hour day when you were a young man," I said, "and of your love of work. But you know, of course, that your friends say you are killing yourself with work. Haven't you overdone the matter?"

Mr. Wood's answer to this question was emphatic.

**T**HERE is one word I wish could be wiped out of the language!" he declared. "And that word is—*rest*. I don't think it is possible to calculate the harm that has been done by the modern crusade against work. It has resulted in a weakening of the whole fabric of character. It has brought about a mistaken mental attitude.

"I believe, I *know*, that the force which enables us to achieve is spiritual. It comes from within. We don't get it on the golf course, or in the gymnasium. It is *here*!" He tapped his forehead. "Here in the mind. As a man *thinks*, so is he. If he thinks that work is a punishment, he will be punished by it. No! I am wrong. He won't be punished by the work itself, but by his false ideas about it. I believe, too, that our shoulders are fitted by some law of nature to bear any burden which we *want* to carry. That is particularly true of work. I don't think work alone ever killed anyone. Worry, anxiety, distaste for the work we are doing—yes! these will destroy a man, morally and physically. But not the work we do with a real love of it.

"This mania for shorter hours, for play, for *rest*, is because so few men love their work for its own sake. They do it for money, or for position, or for personal honor.

"Men call you an autocrat in business," I said. "Don't you believe in team work?"

"Of course I do," was the reply. "No one can get along without loyalty and co-operation. But"—he hesitated, then said slowly—"not all men are alike. I am what I am. Not perhaps what I would choose to be, but what I *am*. And in business"—he hesitated again—"I am a man that works alone, because I cannot work any other way. Most business men drift together in groups. Bankers, for example, seem to form little coteries. The members of a group discuss together their business problems and their plans. They are like a chariot team: two, four, six horses abreast. But I can't travel that way—hitched up with others. Whether I want to or not, I must travel alone. It is like breaking a path, or blazing a trail. *One* man does it. But," he added, "that man is not doing it for himself only! He is breaking trail for his companions and for those who will come after them. He may make mistakes. All he can do is to use his judgment, have the courage of his convictions, and keep on going! That's all I have done. It was the only thing I *could* do."

## "AND HERE IS YOUR BATHROOM"

When the hostess says simply "And here is your bathroom," she is in fact saying, "The freedom of the house is yours. You need not shape your habits to ours, nor be fearful of incommoding us."

An additional bathroom often spells the difference between easy, gracious hospitality and embarrassed, apologetic hospitality. And when no guests are present it adds immeasurably to the comfort and convenience of every member of the family.

\* \* \*

Let the capable plumbing dealer who sells Kohler Ware in your neighborhood show you how a model bathroom

can be installed in a space as small as five feet by six, no larger than a good-sized closet. And let him demonstrate in figures the reasonableness of the investment that will insure your obtaining the unsurpassed quality that every piece of Kohler Enameled Plumbing Ware represents.

You will find nothing more sightly than Kohler designs, nothing more certain to reward you with lasting satisfaction than Kohler fixtures with their enduring covering of glistening, glassy-hard enamel.

\* \* \*

Let us send you our booklet of Kohler Ware for bathrooms, kitchens, and laundries.

### KOHLER

Look for this name, unobtrusively fused into the enamel of every Kohler fixture. It is your guaranty of genuineness and of these distinctive Kohler qualities—(1) the beautiful snowy whiteness of the durable enamel; (2) the uniformity of that whiteness in every fixture.

# Animals Have Queer Streaks—As Well as Folks

(Continued from page 56)

much difficulty. They are as quick and bright as young children, and very soon learn to sit up at the table, to eat with a knife, fork, and spoon, and to use a napkin to wipe their mouths.

To get pictures of animals confined in a cage is a rather simple matter; but these pictures are not of much value beyond showing the creature's form. I have found that people are far more interested in pictures that show how animals really act in nature. To get pictures of this kind the photographer has to take his subjects away from the disturbing signs of civilization, such as observers and buildings. A picnic excursion to the woods with young oranges, the brightest of all the monkeys, has yielded many feet of interesting film.

ON REACHING the woods, I give the oranges their freedom. Since we have become good friends, they never run away. At first, after his release, the young orang is a bit excited, frisks about, and wants to play with me. Presently, we sit down at the foot of a tree and eat luncheon and after this, when he has quieted down, I leave him alone, withdrawing to a distance of a hundred feet—with my five-inch lens ready for action.

What happens then is never very dramatic, but it is exceedingly interesting. Very likely the young orang goes up a tree to a height of some twenty or thirty feet. He breaks off small branches, which he lays across stouter limbs of the tree. In fifteen minutes he has made himself a bed; and by this time I am up in another tree from where I can get a picture of what is going on. The orang does just what he would do if he were at home in the wild—sprawls out on his back, kicks his feet in the air, and enjoys himself.

Sometimes, by hiding a turtle or a lizard in the grass, I see to it that my fellow picnickers have some little adventures. When the orang—an unconscious actor before my lens—comes upon the turtle, he is usually startled and shows it by jumping to one side. But he quickly recovers, and seems to know that the turtle is harmless. Dragging it to an open space, he turns it over and over, investigating it for ten minutes or more, after which he seems to feel certain that he will know one the next time he sees it. Of the lizard the oranges have always been very suspicious and wary. Though the lizard is as harmless as the turtle, the orang never picks it up without using a stick, and even then he handles it very gingerly.

One day from behind a bush, I saw an orang go from the woods to a dry patch of ground beyond. Here he amused himself for some time by throwing pebbles, but presently I saw him stoop and scrape together a pile of dust. He seized a handful of it and threw it with all his might—and you should have seen his attitude of astonishment when the dust made a trail through the air! He was simply delighted with this discovery, and continued making trails of dust in the air until finally some of the dust got into his nostrils, and made him sneeze.

To me, the mental traits of trained

monkeys are even more interesting than the tricks they have learned to do, for these traits are usually revealed by some act which is quite spontaneous. A remarkable instance of this occurred with Suzette, the chimpanzee.

Suzette's fondness for applause had become an ingrained streak. On the stage she had become accustomed to much hand-clapping approval, for the things she could do were remarkable. She could roller skate, ride a bicycle, and dine at a table like a well-behaved lady. She smoked cigarettes, which she lit herself. If you gave her a box of safety matches, she knew they had to be struck on the box. An ordinary sulphur match she always strikes under the table, and she is very careful not to put the match down until it is entirely out.

One day, when three of us were watching Suzette ride her bicycle, it happened that she completed her "stunt" without our noticing it, because we had become engrossed in conversation. By the time we noticed her again, she had dismounted from the machine and leaned it up against a wall. Now we saw that she was watching us intently, but we remained perfectly still. Then, stretching out her hands toward us, she clapped them together vigorously, with all the significance in the world. Words could not have said more plainly: "What's the matter with you fellows? Don't you think I like applause? Can't you give us a hand on that?"

I must tell you something about one other monkey, Dinah, the most interesting animal I have ever known. Dinah was a gorilla that came to us from Africa when she was eighteen months old, the only one of her species that has lived for any length of time in captivity in the United States.

WHEN Dinah was two years old she weighed about seventy-five pounds, and her physical development was equivalent to that of a boy of about eight years. She was as gentle and playful as a child, with many humanlike "streaks." One of these was her fondness for pets. Her particular favorites were a terrier and a rabbit. She would pick up her pets very carefully, never roughly, and when they showed signs of wanting to be released she let them go. The terrier developed the greatest fondness for Dinah and was as pleased to be caressed by her as by a friendly keeper.

But Dinah was fonder even of dolls than she was of animal pets. She would sit by the hour on a little white enameled chair holding a doll in her arms, and I have seen her gazing into the face of one with the same affection a little girl displays toward her favorite doll.

After some months we noticed that Dinah was suffering from loneliness and that her mental condition seemed to improve only when she had human companionship continually. We saw to it that she was with people a great deal of the time, and we devised many recreations for her. The amusement she liked best was certainly very human in its tendency—automobiling. It was perfectly obvious

that she enjoyed riding through the streets and seeing crowds of people. She would sit up in the front seat of the car and look at everything she passed, just like any other motorist taking in the sights.

Even though she was contented with the company of human beings, we could not save Dinah. Her death seemed to be due to a tragedy of world-weariness, which especially affected her appetite. At first she had a splendid appetite and had eaten freely of anything we gave her, such as meat stews, soups, mashed potatoes, cereals, and fruits. But, one by one, she tired of each of these and would not touch a morsel. Then we gave her other foods, such as mangoes, red bananas, plantain, ginger root. We imported many different foods for her. She would take to each with zest for a short time, and then she would refuse to touch it any more. Finally, we came to the end of our resources. There was nothing new we could offer her any more. With no more dietary worlds to conquer, Dinah stopped eating altogether. Three weeks from that time she died a quiet, painless death in the arms of a keeper, who cried as though he had lost a member of his own family.

ANYONE who has had much to do with animals knows that the two factors which count most for success are the very same two that count most in dealing with human beings—patience and sympathy. If you become irritated because an animal receives your first advances hostilely, or because he does not learn promptly something you want him to do, you may as well give up your work until you are in a pleasanter mood. I have found that with patience one can teach even an alligator to be an actor. This creature is not endowed with much histrionic ability, yet we have one here at the Zoo that has played an important character rôle in a great drama, and did it very well, too.

Some time ago, when I was making films for "Evolution," a scientific dramatization which shows the course of evolution through the ages, I needed a creature to represent one of the great prehistoric dinosaurs, a type of animal that lived some fifty million years ago. No such animal being available to-day, I had to train an alligator to fill the part.

First, I went among our alligators, to pick out the most promising specimen for my dramatic school. Some of them exhibited ugly tempers, and were disposed to hurl themselves at me with that side-wise stroke or "swipe," which has force enough in it to break a man's leg. But one old fellow appeared perfectly blasé and didn't seem to mind me in the least. I took him to my office, which he shared with me for two weeks.

He settled down in one corner and seemed disposed to remain there. When meal time came I held out a piece of meat in my hand, and he edged over toward my chair. However, after looking me over, he declined to eat out of my hand and went back to his corner. I let him go. By and by, when he was hungrier, I repeated the offer. Several times he declined, but

**T**HE well built car and the poorly constructed car look very much alike on the salesroom floor. Paint and varnish can cover a multitude of weaknesses in closed car construction.

But you can't ride on the paint.

The superior product begins to prove itself on the first day of use and strengthens its proof every day thereafter. At the end of a year the one car is ready to be traded in at a big depreciation. The Studebaker may not even need a fresh coat of paint.

In a Studebaker Sedan the quality is built into the job. The body will not begin to rattle or squeak after thousands of miles of hard usage. It

will continue to be comfortable and easy riding and will present a fine appearance month after month as when new.

The mohair velvet plush upholstery will not be worn "shiny," the windows will still fit tightly and operate smoothly and the fittings will still be firmly in place even after thousands of miles of use.

There are closed cars that do not include heaters. Yet, you cannot be comfortable unless you are warm. Every Studebaker Sedan is completely equipped including a heater.

Studebaker's quantity production of cars of quality is responsible for the low price of this Sedan.

finally accepted; and during the rest of the two weeks he always took his food from my hands. I can't say that he ever displayed any real friendliness for me, but by the end of two weeks he had become submissive to my handling.

The next thing he had to learn to do was to wear a row of sharp spikes on his back. These I had cut out of black cardboard, to resemble in shape and size those of the real dinosaur. They were fastened on by means of a little under-jacket that went under the alligator's belly. He soon became used to these, and then came his real ordeal.

He had to let me put over his head a mask of modeling clay that weighed a pound and a half. From the mask protruded two horns, and there were holes for his nostrils, through which to breathe. When the mask was first put in place, he resented it, flung it off, broke it; but after a few more trials he took to the make-up with equanimity, and in the end marched across the stage before the camera's eye, giving a perfectly well-behaved representation of the age-old dinosaur.

Sometimes, with a little help from nature, it is possible to record on a film an amazing fact of natural history without much difficulty. At one time, I remember, I wanted to show how much water an elephant can drink when he is really thirsty. In preparation for this, I indicated on a big aquarium tank a scale of figures from one to fifty gallons, the figures being so arranged that they would show on the film and let a moving picture audience see just how much was consumed.

For this picture I waited until a good hot summer day, and it happened that on the afternoon of this day the elephants at the Zoo went on a rampage and heated themselves up considerably. When I thought one of the elephants had acquired a particularly good thirst, I gave him access to the tank and began a record of his operations.

At one draw of his trunk he reduced the tank by a couple of gallons, then squirted this down his throat, and kept on repeating the process. After a ten-gallon drink he had not even flicked his tail. At fifteen gallons he was going strong. At twenty he flapped his ear, apparently at a fly. At twenty-five he seemed to be a bit in doubt, and took a step as though beginning a hesitation waltz. But without any coaxing at all, he resumed. Not until he had squirted down five gallons more was he completely satisfied! If you think this picture isn't amusing, you should hear the laughter that comes from every audience when they see demonstrated before their eyes the fact that there lives a creature with a thirty-gallon thirst!

**E**ARLY in my experience in photographing animals I learned that deer have a very well-developed streak of humanlike curiosity. You can't set up a camera where people are about without drawing a crowd. The same is true in a deer park! When you enter, the deer may be moving about at the far end of the enclosure in very interesting groups; no sooner do you get your tripod and camera adjusted than you find them crowding close. Just like folks, they want to see what it's all about, and they seem perfectly willing to get into the picture too.

From my experience, I would say that

wild turkeys, owing to their shyness, are the most difficult of all living subjects for the camera. Pictures of them actually taken in the wild are very rare indeed. I succeeded in getting some once—the hardest task I have ever undertaken.

One spring, in a swamp in South Carolina, I discovered among low sand hills a patch of hard-packed earth some twenty feet in length—obviously a turkey "strutting ground." To get pictures of what would happen there during the mating season the next year, it was necessary to make preparations long in advance, and right away I proceeded to build a "blind," at a distance of three hundred feet, behind which to conceal myself and my camera when the time came.

The following spring I went to this blind with Sam, my old negro guide. The spring trip through the swamp was a battle with flies, mosquitoes, and redbugs. I was well covered with gloves and netting, and soaked with citronella and kerosene.

**A**FTER reaching the blind it was necessary to remove the netting from my head so that I could have a clear field of vision for operating my camera when the turkeys appeared. For a whole day and a half I bathed my face and neck in citronella to keep off mosquitoes, and soaked my socks in kerosene to keep off the redbugs.

At noon of the second day Sam and I began to think something was wrong, or the turkeys would have come out. We had made no noise that could have alarmed them. So it seemed that they must have detected the odor of citronella and kerosene. I abandoned the use of those protective scents, and presently the redbugs were burrowing through my socks and into my skin. Against the mosquitoes I had put a netting over my head with holes in it for my eyes. Through these holes the mosquitoes came in droves. But for hours Sam and I held the fort—and late that afternoon we were rewarded.

Out came the gobbler from between the little sand hills. He preened himself, ruffled his plumage into a beautiful bronze-green ball and, dragging his wings on the ground, strutted up and down, giving free play to the streak of vanity in him. His harem, several hens, came after. They walked up and down in the vicinity of their proud lord, but paid scant attention, I thought, to his mighty self-conceit.

Next to my turkey pictures, the films that have cost me the most in time and trouble are those showing the singing of insects. I have become almost as fond of the songs of insects as most people are of bird songs, and usually have in my house several different varieties of crickets, grasshoppers, leaf-winged locusts, or katydids. We all know that these creatures make very musical sounds, a trill, a chirp, or a slow musical tremor, while the tree cricket has a remarkable song, exactly resembling the music of sleigh bells.

Most people think that insects sing with their mouths, but the fact is that they sing by rubbing their wings together, or rubbing the wings with the legs, or by rubbing together the sawtooth edges of their hind legs. This singing is done by the male only; his song is a mating call.

You may have noticed that most insects, except some of the grasshoppers, sing only at night and in the dark. They are not even apt to sing when the moon is

bright. When I first tried to get pictures of their singing movements I discovered that they always lapsed into silence in the presence of a light strong enough for photography; but after considerable experimentation, I found that I could induce almost any insect to sing in the presence of a strong light by promoting among them a spirit of rivalry—akin perhaps to humanlike jealousy or competition. This is the way I did it:

I went to the fields and, by listening carefully, located some of the most lusty-voiced crickets under their flat stones, and brought home both males and females. I had already built a little sand pit which was surrounded by a glass six inches high. The pit was divided into two parts by a glass partition. On one side of the partition I put two males; on the other side three males and two females.

The two lone males, on seeing the females in the other part of the pit, immediately tried to get through the glass partition to the side where the females were. Finding this impossible, they did what they could to draw the attention of the females to themselves, tuned up their instruments and, in spite of the bright light, harped away with zest. Provoked by their rivals singing, the crickets in the sand pit with the females also began to sing. So I had a quartet, and got a perfect picture. On the screen the cricket appears as big as a terrier, and you can see perfectly how he sings by scraping together the brittle edges of the wings, little mica-like patches called stridulating organs.

I have tried to induce katydids and tree crickets to sing by making sounds on various stringed instruments, such as the violin and guitar, but the method has not been successful. By another method, however, I found I could get them to sing very well: When katydids are put into a dark room adjoining the light room where I am to make pictures, they start singing very readily. Then, in spite of the light, the katydids in the bright room cannot resist singing, either.

**S**OME people think that the song of the tree toad, which you hear everywhere on dark nights in the country, especially preceding showers in spring, is very mournful, but I am very fond of it. If you want to catch this songster take your flashlight and go along a highway ditch or into a boggy spot. Presently you will hear his quavering note. Go toward the sound, then flash your light. The singing will cease. Put out your flash, and it will resume. Thus, presently, you will be very near the creature, and when you next flash your light you will see him behind some broad leaf or twig, perhaps detect him by his quivering throat. To catch him you will have to grab quickly, but it is easily done when you know how. Take him into a lighted room of your house and you may get a fair solo from him if you play on a high E string of the violin; but there is a still better way of inspiring your tree toad to music. Put a thin sheet of brass in a vise and run a hack saw through it. This will send the shivers up your spine and set your teeth on edge, but the same noise will be an inspiration to the toad. If he is like those I have had, he will respond to this fearful racket with his best and most mournful-sounding quavers.

# The Millionth Buick

Buick has produced its millionth motor car and occupies a unique position in the industry through the attainment of this coveted production figure.

Wonder is expressed at such an achievement even when effected by a very low priced car, and in the case of Buick, a quality automobile, the record is strikingly significant.

The fact that the public has desired and purchased one million Buick cars, an unprecedented number in its price class, implies extraordinary respect for Buick power, reliability, comfort and beauty.

It bespeaks unique and unquestioning public trust in Buick service,

engineering and manufacturing methods, and in Buick ideals.

Finally, it indicates an ever-widening preference for Buick and a belief in its superior value, extending even to people who could afford much higher priced cars.

Proud as the builders of Buick are at having reached this milestone, they are deeply conscious that it involves a high responsibility and it is their purpose to honor this obligation by continuous adherence to Buick ideals:

—to the end that Buick shall always merit the recognition now so universally accorded—The Standard of Comparison.

## THE FAMILY'S MONEY

# Taking the Children Into Partnership

**S**INCE they started to school my two girls have had allowances of twenty-five cents each week. A year ago, however, when they were eleven and nine, they pleaded for a "raise" in order to gratify their growing wants and to start bank accounts.

Much as I wanted to encourage them, at first it seemed impossible. Then, because they are intelligent and reasonable, I explained to the children that my housekeeping allowance is seventy-five dollars a month. Out of that sum I must pay all our food and light bills, buy drug sundries, provide reading materials and recreation, supply the hundred-odd things the greedy house is constantly clamoring for—mops and polishes, saucepans and towels—and furthermore must dress the three of us. If they were in earnest and would help cheerfully we would try an experiment in economy.

**T**HIS was the simple, satisfactory plan: At the end of each month we would pay for our food and electricity. The balance of our seventy-five dollars would then be divided into three equal parts. Each of us would pay for our own clothing, tooth paste, "dutch treats"—and we'd set about building up three bank accounts.

The girls' eager enthusiasm surprised and aroused me. Serious thought hovered over our housekeeping. We made plans and stalked several predatory leaks to their lair. The most voracious of these leaks came from our scattering promiscuous invitations to lunch and dinner. We proceeded to throttle it. While we believe in spontaneous, whole-hearted hospitality, true friendship is not a matter of calories. In my scheme of discipline it became possible for the girls to have two chums to a meal once each week. Visitors to meals are events now. I estimate we have reduced our food bills thereby at least ten dollars monthly.

It follows naturally that our own meals were simplified. We spent more time in the kitchen, eliminating expensive canned luxuries and concentrating on simple, wholesome foods. We learned to use cheaper cuts of meat, and served it once a day instead of twice or thrice as formerly. Our meat bill alone has been cut more than ten dollars per month.

We use four quarts of milk daily now, whereas we formerly used two. We save

two dollars each month by having the girls go for it instead of having it delivered. Incidentally, the brisk walk before their eight-o'clock breakfast has played a big part in cheating the druggist. Certain articles of food which the girls were positive they detested became interesting when compared with magnesia. So prunes, dried peaches, spinach, and carrots are beginning to feel at home in our diet. It is a punishable offense to waste food.

The greatest good has come from the feeling of important responsibility which the girls have acquired. They check up the tags from butcher and grocer, and Ruth walked on air the day she found that by a mistake in addition we had been overcharged ten cents! They are less wasteful with crayons, paints, and drawing paper. They are more careful with their clothing. I do not need to remind them that if they want to climb trees they should don overalls. Careless Ruth spent twice as much last year as Elizabeth did for hose and handkerchiefs, and elastic for her bloomers. She managed, however, with one pair fewer of shoes than she ordinarily required.

Instead of buying lunches at school this year, the girls bought lunch kits and thermos bottles and prepare their own. We estimate this to save from two to three dollars each month.

A show once or twice a month is proving beneficial to purses and morals. Every week or every night is disastrous.

Interest grows. Elizabeth plans to buy a bicycle. I approve. She is twelve now and needs outdoor interests. Ruth is going to invest in equipment for poultry raising, and looks forward to becoming a great financier. As for myself, I have been able to buy the typewriter I've been praying for so long.

**W**E ARE all healthier, busier, and more congenial as a result of our adventure in thrift. Arithmetic has taken on a new meaning to the girls. Home is more than a place where one eats and sleeps. At least two girls in this country are going to be able to manage homes of their own some day.

In the month just ended we spent for meat, \$9.65; milk, \$10; vegetables, \$6; and for groceries \$14.55, and our electric bill is \$2.45. Which leaves for each of us almost eleven dollars! And we are starting a new year.

MRS. E. F. B.

## How You Can Contribute to This Department

**T**HE Family's Money Department of this magazine belongs to you. It is devoted to the financial problems of the average American family, and it tells in concrete stories how some of these families have increased their income or reduced their expenses. We look to you for these stories. Have you found some way to make money on the side, or to cut down the family's bills without sacrificing a

wholesome standard of living? Write us an exact account of your experience. Be specific! We cannot use essays or generalities of any kind. Get down to dots; give us the facts and the figures and let them speak for themselves. Manuscripts must not be longer than 1,500 nor shorter than 400 words. For all those we take we pay on acceptance at our usual rates.

## *Please write us* For Winter Comfort

Let us send you our newest and most attractive booklet—"Beauty Land"—which explains the merits of Hinds Honey and Almond Cream. Simply mail a brief request to the A. S. Hinds Co., at Portland, Maine, and this pretty booklet will come to you in a few days.

If you'll just try this wonderful cream for some of the purposes described we are very sure you will soon give it preference, because that is what so many other nice looking ladies have been doing all these years past.

It is the purity and refinement and gratifying effect of Hinds Honey and Almond Cream that have gained for it such a remarkable nation-wide and world-wide patronage. It is good for everybody in your home,—grown-ups and kiddies. Father and brother like it after shaving and to keep their hands smooth and good looking. It prevents as well as heals the chapping.

### HINDS WEEK-END BOX

makes a very useful gift and costs only 50c postpaid, or at your dealer's. It contains those essentials for the comfort and attractiveness of the face and hands. Trial size, Hinds Honey and Almond Cream, Cold and Disappearing Cream, Soap, Talc and Face Powder.

As you hike along the windy street  
Facing the blast of icy sleet  
Chapped faces, hands and ankles too  
And windburned skin may trouble you.

Then pause a bit upon your way  
And take the Cre-Maids' tip today,  
Just use Hinds Honey and Almond Cream  
And meet the weather with joy supreme.

Frostbites, chilblains and kindred ills  
Hinds quickly comforts, heals and stills.  
Chapping and windburn pass away,  
Soft lovely skin just comes to stay.

When the winds are raw and the cold extreme  
You need Hinds Honey and Almond Cream.

**WONDERFUL BASE FOR FACE POWDER.** Hinds Honey and Almond Cream is now used for this purpose with marvelous success. Moisten the skin slightly with the cream, let it nearly dry, then dust on the powder. It will adhere to perfection.

**AS A MANICURING AID THIS CREAM** softens the cuticle, prevents soreness and preserves the lustre of the nails.

All druggists and department stores sell Hinds Honey and Almond Cream. We will mail you a small sample for 2c or trial bottle for 6c.

Ask your dealer for Hinds Superior Toilet Requisites, but if not obtainable, order of us. We send postpaid in the United States.

Pattern No. 548

**"They mopped 'em up almost as easy as your mother cleans this Congoleum Rug"**

Housewives find the smooth, enameled surface of a Gold-Seal Congoleum Art-Rug so easy to clean. Every speck of dust and dirt vanishes like magic after a few sweeps of a damp mop or cloth.

Modern women everywhere are replacing their dust collecting woven carpets and rugs in every room with sanitary, easy-to-clean Congoleum Rugs. They come in artistic patterns and beautiful colors appropriate for any room in the house.

Tremendously durable, Gold Seal Congoleum Art-Rugs sturdily withstand the wear of busy feet. And they lie flat on the floor without any kind of fastening.

6 x 9 feet	\$ 9.00	The rugs illustrated are made only in the five large sizes. The small rugs are made in other designs in harmony with them.	11½ x 3 feet	\$ .60
7½ x 9 feet	11.25		3 x 3 feet	1.40
9 x 9 feet	13.50		3 x 4½ feet	1.95
9 x 10½ feet	15.75		3 x 6 feet	2.50
9 x 12 feet	18.00			

Owing to freight rates, prices in the South and west of the Mississippi are higher than those quoted.
